

Sub (52) 167-1

13 March 2003.

Mr. Ken Macken,  
Senior Inspector,  
Environmental Protection Agency,  
Richview,  
Clonskeagh Road,  
Dublin 14.

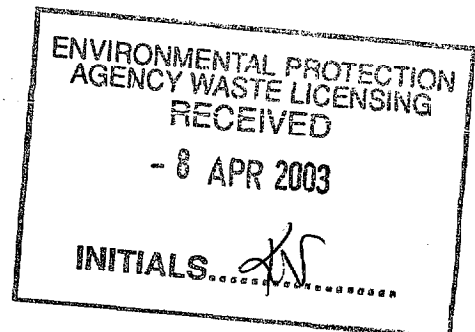

Dear Mr Macken,

On behalf of ICMSA in Meath, I wish to outline below conditions which we are strongly of the view should be attached to the EPA licence for the proposed incinerator at Carranstown, Dunleek, Co Meath.

1. If there is any breach of the emission limits, the incinerator plant will be immediately closed down by the EPA until such time that there is a full environmental impact study carried out.
2. Notwithstanding our total opposition to the granting of planning permission and license for the incinerator at Carranstown, we are of the view that a condition should be attached which would place full liability on the operators of the incinerator for any cost or losses of any nature, either direct or indirect that may be incurred or suffered by landowners, farmers or the food sector arising from the operation of the incinerator whether the operation is in full compliance with, or, not in compliance with any or all of the conditions set down in the planning permission and the EPA- license or where there is willful action or inaction by the operators, or where there is accidental or incorrect operation of the incinerator.
3. Furthermore, the operators should indemnify and keep indemnified landowners, farmers and food processors against any liability arising from product liability obligations to third parties.

Yours sincerely,

Emer Dunne,  
National Council Member for Meath.

PS, I would be delighted if I could meet you.  
To talk about in more details  
you greatly  
Emer Dunne.
