Re/ Application No. 213/1

Dear Sirs,

I note a vast discrepancy between the amount of waste indicated by Roadstone at 110,000 tons and their site notice indicating 300,000. Something is wrong here, which estimate is correct? Is their EIS based on which of these figures, if on the lower, then clearly the EIS is wrong for the expanded amount, enough for an objection here.

If these amounts vary so much, this indicates to me that Roadstone do not know what is in the ground – cause for another objection. I would suggest that they start again with a proper survey. How can they talk about segregation when they do not know what is there?

If the lower amounts were correct, this means Roadstone could dump more. I object to this.

The whole tenure of their EIS seems to a layman to be so seriously flawed as to cause me to strenuously object to the entire application, which I now do.

Yours faithfully,

Hugh Meece
