10 JAN-07

Dear Sir / Madam,

With reference for the proposed development No W0230-07. We are writing with great concern.

Our greatest concern is for the health of our children. We have four beautiful children, the oldest nearly nine and the youngest nearly one. The primary school is only over the field from this proposed development, 500 meters to be exact. We live two minutes walking distance from the school, where our children attend. If this development goes ahead, the risk to their future health will be effected. We dread to think of the adverse effect on the health of people from the proposed chimneys and the harmful bacteria blowing freely in the wind from the offal blood the various sludges and pharmaceutical waste expected to be brought to this proposed site - not to mention what accidental spillage might get into the nearby river and our domestic wells.

Another concern is the risk to the environment including humans and animals God forbid if there was an explosion or a fire.

As it is now there is a lovely calmness and peaceful living here, but with 60 plus lorries a day coming and going our country side will be destroyed forever. Not to mention the constant noise pollution this will bring.

Another concern is the light pollution at night. At the moment there is only a few orange and white lights. Add ten times more and it would be an eye sore at night living here,

Another concern of ours is the two-thirds of heat energy going to be wasted to the environment. The harm they're going to do to us over the years to come, who knows? Not forgetting Global warming?

I hope you consider the above in great detail when considering the application submitted to you.

yours sincerely

Nira Hynes
