Dear

Catherine,

Thank you for your acknowledgement letter. I would like to update my submissions, the noise I refer to, is also in a report carried out by Biospheric Engineering, which clearly shows noise levels being broken, and a tonal noise which is quite clear. The noise is not just an isolated incident, it is very frequent, sometimes going on for days and nights at a time. I lost count how many times I have been awoken from my sleep due to the noise. Even in the daytime, it is very hard to concentrate on my studies due to the noise, in particular the tonal noise which is emitted. Also since the factory

(2)

in question added an extension to their buildings, a very very loud noise is emitted to release steam or some other process, this can happen day or night also. I have been complaining about the noises since 2004-2005, and have been in contact with the council and yourselves on numerous occasions. Please contact me directly for any more information I can provide you with. Also I would be quite happy for any monitoring to be done on or around or in my property to provide evidence in support of my complaint, as I write this letter the tonal noise is quite prevalent.

Yours sincerely

D. Healy
