Pat,

Thanks for all corres re Arklow. Allen's report is very important and email this a.m. from consultants confirms that they got their calculations wrong. I assume no decision can be made until modeling is revised and Allen revisits the issue. This is an important case in view of the contaminated nature of the material for removal.

Jimmy King

Folks,

I refer to Allen Williams' report below. From his report I understand that the proposed disposal method may not prevent the contaminated spoil from entering the marine environment.

As you will all probably wish to consider this application further in light of Allen's report, I have held action on writing to the applicant.

Regards  
 Pat
