COR-RS-LA-002

An aerial photograph of a residential neighborhood, likely from a Google Maps satellite view. The image shows a street with several houses, green lawns, and trees. A prominent red diagonal watermark is overlaid across the center of the image, reading: "For inspection purposes only. Consent of copyright owner required for any other use." The watermark is in a bold, sans-serif font. The background shows a typical suburban street layout with houses, driveways, and landscaping.

TERMINAL PLATFORM LEVEL = 33.4m OD MALM

For inspection purposes only.
Consent of copyright owner required for any other use.

Project Name: Corrib Field Development
Project Number: 13882-030-110-0172
Drawn by: C. Leydon
Checked by: S. Coss
Date: Nov 03
For Planning Application: COR-AM-FW-001

£ established consensus platform. Species include Lardogobio Pys, (Pisces carassius) Gold Bream (Pisces alburnus) and Scott Pines (Pisces dentatus).

Carency Feed Oats (Protein) and
Predence (Types labels) are
Carnation Food (Protein) and
Carnation Food (Protein) and

Flarebacks will be created in the southern ponds. Always earth to be installed and subsequent ponds to reduce the volume. Clumps of eelgrass, Cherry Reed (Phragmites australis), and Common Reed (Phragmites australis) will be planted in the ponds. The ponds will be the same size as the ponds.

1. Letting his mother know he is not in the area is important.

An aerial photograph of a residential area with a red diagonal line and a north arrow. The line is labeled "For inspection purposes only." and "Consent of copyright owner required for any other use."

|  | Proposed Mixed Native Low Deciduous Scrub Planting With Coniferous Trees |
|  | Proposed Grass/Fruit Mix |

Mature Plantations

The condition of the most mature plantations should be monitored and assessed as part of the landscape management of the site. During the life span of the terminal on-going landscape management and maintenance operations must include the clear felling and possible replanting of the plantations.

Reinforcement Notes
The concrete terminal platform is to be broken up and removed from site.
Foundation stone is to be ripped to remove compaction and is to be reused in situ.
Area of former terminal is to be filled and roughly graded to promote drainage.
Following raised grassing impeded mineral soils are to be laid to a minimum 300mm depth, and roughly graded to form hollows and mounds.
Hollows created may capture and retain water and encourage the establishment of wetland species.
