Subject: DPC D@S - initial thoughts

Hi Tara,

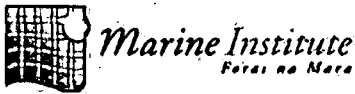

Further to our conversation the other day, I've had a look at the supplementary sediment chemistry test results from Dublin Port relating to making a delineation in the channel in order to decide whether or not material is suitable for conventional DaS.

I looked at these results in relation at the sediment chemistry from previous campaigns back to 2007. The concentrations involved appear to be comparable. Consequently, I don't see why this material would not be treated in the same way as earlier material dredged from the same area and be subject to similar mitigating conditions.

Best regards,
Margot
