Subject: Ormonde Organics

Hi all

The OEE received a complaint from a member of the public in relation to Ormonde Organics. I would like to outline the key elements of the complaint and forward this as a submission on the application so that licensing can ensure that these issues have been considered as part of the licence application process:

1. The main issue raised was concerns over waste acceptance at the facility and the risk of unsuitable material entering the plant.
2. To ensure that material produced at the facility is suitable for landspreading in line with national regulations

Regards & Thanks

Noel
