EPA Application No. S0024-01

Observations for EPA regarding application by Dublin Port Company for Dumping at Sea Permit.

Dublin Bay is a Protected Area:

Dublin bay is protected directly by 6 protected European sites that Bord Pleanala admits will be significantly affected by the dumping.			
Rockabill to Dalkey	SAC	EU code	003000
Lambay Island	SAC	EU code	000204
North Dublin Bay	SAC	EU code	000206
South Dublin Bay	SAC	EU code	000210
North Bull Island	SPA	EU code	004006
South Dublin Bay & Tolka	SPA	EU code	004024
Dublin Bay is also a Natura 2000 site			
Dublin Bay is now also a UNESCO biosphere reserve site			

Water Quality

"The deterioration in water quality within the cSAC is evaluated as being potentially significant as direct damage to the physical quality of the environment in terms of water quality may directly and indirectly affect the qualifying interests of the cSAC. "

"Accidental spillages of polluting substances which could affect benthic fauna [a community of organisms that live on, or near the sea bed] & water quality or features of interest both habitats and species would be potentially significant should an incident occur."

The Marine Strategy Framework Directive (MSFD)

(The granting of this licence would be contrary to the stated objectives of this directive).

The Marine Strategy Framework Directive is a major piece of EU legislation that requires Member States to achieve good environmental status (GES) in the marine environment by the year 2020 at the latest. Good environmental status in the marine environment means that the seas are clean, healthy and productive and that human use of the marine environment is maintained at a sustainable level. The Directive requires an assessment to be made of our marine waters against an agreed set of standards across a number of important environmental areas (e.g. biodiversity, fish stocks, and contaminants). Once the assessment is made, appropriate environmental targets and indicators must be established and a program of measures put in place to achieve GES i

Protection of Harbour Porpoise:

The plan is to dump the material, some of which is moderately contaminated, at Burford Bank. This is an area used by the harbour porpoise, an animal protected under EC habitats directive (92/43/EEC).

The dumping is planned for day and night in all weathers. The best practice for dumping at sea is to dump only in winds of less than force 4 and in daylight. The reason for this is that a Mammal observer on the barge would spot Seals, Dolphins or Porpoise at the dump site which is a recognized foraging ground for them.

Protection of Marine life:

It is a given that all life on the Sea floor for the 10.32 Km of the Fairway / sea lane would be killed/wiped out.

Similarly at the dump-site all life would be wiped out and with little chance of re colonisation as the process is repeated each year when dumping recommenced.

Recovery time is all that is discussed in the EIS document none of the dead sea life (flora and fauna) will recover.

The materials to be dumped is called Sands and Muds, the mud will form a plume and envelope the entire bay as the dumping is planned for all states of the Tide and all weathers 24/7 there will no recovery time at all.

This adds to the damaging already done to the sea bed by souring during the dredging.

Each barge is likely to hold about 3,000 tons of material when fully laden. To dump, the floor of the barge drops away in the middle and the entire content leaves the barge very rapidly falling down to the sea floor. It's a given that all life in the water including passing shoals of fish will be wiped out.

No Proper Consideration to Alternatives:

The applicant must satisfy the EPA that there is no suitable alternative means of disposal.

At the Oral hearing of An Bord Pleanala (reg.no.PL29N.PA0034)

Witness statement of Mr. Donal Doyle on behalf of the applicant Dublin Port Company

Response: Given the large volume of slightly/moderately contaminated material, the cost associated with land filling and/or export would be prohibitive and the energy consumption associated with exporting the material would be significantly greater than the sea disposal option proposed in the EIS. In terms of bringing the material onto land for recovery, the capacity within Graving dock Nr. 2 and Berth 52/53 is limited and will be largely used by the dredging from Alexander Basin....Hence no further capacity for contaminated material. Based on the above analysis, the dumping at sea and overlain with dredged gravel is considered the most appropriated method for dealing with this material.

It would not be consider best practice to dump contaminated material in Dublin Bay an UNESCO biosphere reserve site and the economic cost should not be a deciding factor.

Change in the typography

There has not been adequate study, research or consideration on how much of the material planned to dump will end up inside the Bull Island and possibly blocking up Sutton Creek and the channel itself. The channel called the Blue Lagoon/ Sutton Creek between Bull Island and the roadway Clontarf Rd to James Larkin road and finally Dublin Rd is silting up at an alarming rate. It is only now that people are beginning to see the relationship of the dumping in the Bay and this silting up. It's possible that the dumping of such a massive amount of material could close in the Lagoon from the sea altogether. It's has been observed that all sand or excess sands in Dublin Bay builds up on the Bull Island and it's also building up inside in the Blue Lagoon.

Altering Tidal Pattern.

This large scale dredging and dumping of material at sea, so close to the coast indicates there is real potential for serious altering of tidal pattern.

Flooding: This combined with the effects of climate change could add to the dangers of more frequent flooding as the EIS states that there will be increased wave overlap on the Clontarf promenade by Dollymount. There is also potential for increased flooding on the banks of the River Liffey.

"Major channel deepening works in the approach to Harwich Harbour has altered the sediment transport regime (HR Wallingford & Posford Duviver Environment 1998). The capital dredge increased siltation in the harbour, which subsequently reduced the amounts of sediment input into the Stour/Orwell Estuaries and increased the requirement for maintenance dredging. The net effect is to increase mudflat and saltmarsh erosion in the estuaries, with adverse effects on intertidal morphology. In this case the capital dredge has created the conditions for increased erosion, which is sustained by the regular removal of sediment from the harbour for disposal at sea".

"Capital dredging operations in an estuary may permit a saltwedge intrusion to travel further upstream than previously, increase shoreline wave action, change tidal range, tidal currents, suspended sediment load and suspended sedimentation in areas away from the deepened part of the river (PIANC in preparation). The hydrodynamic changes and their effect on sediment erosion, deposition and transport may cause secondary geomorphological changes away from the dredge location, including the potential erosion of intertidal areas. These processes are affected by the sea bed sediment characteristics, underlying geology and, particularly on mudflats, the flora and fauna". *Note: Potential for erosion at other sites:*

Observations for EPA regarding application NO. SOO24-01 by Dublin Port Company for Dumping at Sea Permit.

1. **Dublin Bay is a Protected Area:**

Dublin bay is protected directly by 6 protected European sites that Bord Pleanala admits will be significantly affected by the dumping.			
Rockabill to Dalkey	SAC	EU code	003000
Lambay Island	SAC	EU code	000204
North Dublin Bay	SAC	EU code	000206
South Dublin Bay	SAC	EU code	000210
North Bull Island	SPA	EU code	004006
South Dublin Bay & Tolka	SPA	EU code	004024
Dublin Bay is also a Natura 2000 site			
Dublin Bay is now also a UNESCO biosphere reserve site			

2. **The deterioration in water quality in Dublin Bay.**

3. **The Marine Strategy Framework Directive (MSFD)**

(The granting of this licence would be contrary to the stated objectives of this directive).

4. **Protection of Harbour Porpoise:**

Burford Bank is an area used by the harbour porpoise, an animal protected under EC habitats directive (92/43/EEC).

5. **Protection of Marine life:**

6. **No Proper Consideration to Alternatives:**

7. **Change in the typography**

Silting causing lose of sea and erosion causing lose of mud and flat lands.

8. Increase Risk on Coastal and River Flooding by altering tidal pattern.

This large scale dredging and dumping of material at sea, so close to the coast indicates there is real potential for serious altering of tidal pattern.

Flooding: This combined with the effects of climate change could add to the dangers of more frequent flooding as the EIS states that there will be increased wave overlap on the Clontarf promenade by Dollymount and further up the river liffey.

8. Increase Risk on Coastal and River Flooding by altering tidal pattern.

This large scale dredging and dumping of material at sea, so close to the coast indicates there is real potential for serious altering of tidal pattern.

Flooding: This combined with the effects of climate change could add to the dangers of more frequent flooding as the EIS states that there will be increased wave overlap on the Clontarf promenade by Dollymount and further up the river liffey.

EPA Application No. S0024-01

Observations for EPA regarding application by Dublin Port Company for Dumping at Sea Permit.

Name: Noel A. Thompson

Address: 224, Tonlegee road, Dublin
5

Date: 29th August 2015

Observations for EPA regarding application by Dublin Port Company for Dumping at Sea Permit.

1. Dublin Bay is a Protected Area:

Dublin Bay is protected directly by 6 protected European sites that Bord Pleanala admits will be significantly affected by the dumping.			
Rockabill to Dalkey	SAC	EU code	003000
Lambay Island	SAC	EU code	000204
North Dublin Bay	SAC	EU code	000206
South Dublin Bay	SAC	EU code	000210
North Bull Island	SPA	EU code	004006
South Dublin Bay & Tolka	SPA	EU code	004024

Dublin Bay is also a Natura 2000 site

Dublin Bay is now also a UNESCO biosphere reserve site

2. The deterioration in water quality in Dublin Bay.

3. The Marine Strategy Framework Directive (MSFD)

(The granting of this licence would be contrary to the stated objectives of this directive).

4. Protection of Harbour Porpoise:

Burford Bank is an area used by the harbour porpoise, an animal protected under EC habitats directive (92/43/EEC).

5. Protection of Marine life:

6. No Proper Consideration to Alternatives:

7. Change in the typography

Silting causing lose of sea and erosion causing lose of mud and flat lands.

8. Increase Risk on Coastal and River Flooding by altering tidal pattern.

This large scale dredging and dumping of material at sea, so close to the coast indicates there is real potential for serious altering of tidal pattern.

Flooding: This combined with the effects of climate change could add to the dangers of more frequent flooding as the EIS states that there will be increased wave overlap on the Clontarf promenade by Dollymount and further up the river liffey.

6. No Proper Consideration to Alternatives:

7. Change in the typography

Silting causing loss of sea and erosion causing loss of mud and flat lands.

8. Increase Risk on Coastal and River Flooding by altering tidal pattern.

This large scale dredging and dumping of material at sea, so close to the coast indicates there is real potential for serious altering of tidal pattern.

Flooding: This combined with the effects of climate change could add to the dangers of more frequent flooding as the EIS states that there will be increased wave overlap on the Clontarf promenade by Dollymount and further up the river Liffey.

EPA Application No. S0024-01

Observations for EPA regarding application by Dublin Port Company for Dumping at Sea Permit.

Name: Rowena Ryan

Address: 12, Dollymount Avenue, Clontarf Dublin
3

Date: 29th August 2015

Observations for EPA regarding application by Dublin Port Company for Dumping at Sea Permit.

1. Dublin Bay is a Protected Area:

Dublin Bay is protected directly by 6 protected European sites that Bord Pleanala admits will be significantly affected by the dumping.			
Rockabill to Dalkey	SAC	EU code	003000
Lambay Island	SAC	EU code	000204
North Dublin Bay	SAC	EU code	000206
South Dublin Bay	SAC	EU code	000210
North Bull Island	SPA	EU code	004006
South Dublin Bay & Tolka	SPA	EU code	004024

Dublin Bay is also a Natura 2000 site

Dublin Bay is now also a UNESCO biosphere reserve site

2. The deterioration in water quality in Dublin Bay.

3. The Marine Strategy Framework Directive (MSFD)

(The granting of this licence would be contrary to the stated objectives of this directive).

4. Protection of Harbour Porpoise:

Burford Bank is an area used by the harbour porpoise, an animal protected under EC habitats directive (92/43/EEC).

5. Protection of Marine life:

6. No Proper Consideration to Alternatives:

7. Change in the typography

Silting causing loss of sea and erosion causing loss of mud and flat lands.

8. Increase Risk on Coastal and River Flooding by altering tidal pattern.

This large scale dredging and dumping of material at sea, so close to the coast indicates there is real potential for serious altering of tidal pattern.

(The granting of this licence would be contrary to the stated objectives of this directive).

4. Protection of Harbour Porpoise:

Burford Bank is an area used by the harbour porpoise, an animal protected under EC habitats directive (92/43/EEC).

5. Protection of Marine life:

6. No Proper Consideration to Alternatives:

7. Change in the typography

Silting causing lose of sea and erosion causing lose of mud and flat lands.

8. Increase Risk on Coastal and River Flooding by altering tidal pattern.

This large scale dredging and dumping of material at sea, so close to the coast indicates there is real potential for serious altering of tidal pattern.

Flooding: This combined with the effects of climate change could add to the dangers of more frequent flooding as the EIS states that there will be increased wave overlap on the Clontarf promenade by Dollymount and further up the river liffey.

2. The deterioration in water quality in Dublin Bay.

3. The Marine Strategy Framework Directive (MSFD)

(The granting of this licence would be contrary to the stated objectives of this directive).

4. Protection of Harbour Porpoise:

Burford Bank is an area used by the harbour porpoise, an animal protected under EC habitats directive (92/43/EEC).

5. Protection of Marine life:

6. No Proper Consideration to Alternatives:

7. Change in the typography

Silting causing loss of sea and erosion causing loss of mud and flat lands.

8. Increase Risk on Coastal and River Flooding by altering tidal pattern.

This large scale dredging and dumping of material at sea, so close to the coast indicates there is real potential for serious altering of tidal pattern.

Flooding: This combined with the effects of climate change could add to the dangers of more frequent flooding as the EIS states that there will be increased wave overlap on the Clontarf promenade by Dollymount and further up the river Liffey.

Observations for EPA regarding application by Dublin Port Company for Dumping at Sea Permit.

1. Dublin Bay is a Protected Area:

Dublin bay is protected directly by 6 protected European sites that Bord Pleanala admits will be significantly affected by the dumping.			
Rockabill to Dalkey	SAC	EU code	003000
Lambay Island	SAC	EU code	000204
North Dublin Bay	SAC	EU code	000206

South Dublin Bay	SAC	EU code	000210
North Bull Island	SPA	EU code	004006
South Dublin Bay & Tolka	SPA	EU code	004024
Dublin Bay is also a Natura 2000 site			
Dublin Bay is now also a UNESCO biosphere reserve site			

2. The deterioration in water quality in Dublin Bay.
