am writing to complain about the use of chlorine in Great Island power station .rocks that were once covered in seaweed in the river are now barren .no natural spatfall of mussels in river for 5 or 6 years .huge decline in green crab numbers .huge mortality in oyster and cockle stocks .while there may not be concrete proof that can link these to Great Island power station use of chemicals yet it is a major coincidence that these problems were not evident until the changeover to gas and the increased use of the power station in recent years .use of chlorine should be stopped immediatly. I am commercial fishing all my live on waterford estuary and can see the changes that have taken place .

Regards

Stephen Burke
