Re: IE Licence Review – Saint-Gobain Mining (Ireland) Ltd. Gypsum extraction facility near Carrickmacross, Co. Monaghan and landfill and processing facility at Lisnabow, Kilmainhamwood, Kells, County Meath

Your Ref: P0519-04

Our Ref: 21/248 [cf. 20/72]

Dear Sir/Madam,

Geological Survey Ireland is the national earth science organisation and is a division of the Department of the Environment, Climate and Communications. We provide independent geological information and advice and gather various data for that purpose. Please see our <a href="website">website</a> for data availability. Use of our data or maps should be attributed correctly to 'Geological Survey Ireland'.

With reference to your email received on the 7 July 2021, concerning the industrial emissions licence review for the Saint-Gobain Mining (Ireland) Ltd. Gypsum extraction facility, Geological Survey Ireland would encourage use of and reference to our datasets. Please find attached a list of our publicly available datasets that may be useful to the environmental assessment and planning process. We recommend that you review this list and refer to any datasets you consider relevant to your assessment. The remainder of this letter provides more detail on some of these datasets, with particular reference to the proposed development site.

We are pleased to see use of our Bedrock, Geoheritage and Groundwater datasets within the EIAR.

## Geoheritage

Geological Survey Ireland is in partnership with the National Parks and Wildlife Service (NPWS, Department of Housing, Local Government and Heritage), to identify and select important geological and geomorphological sites throughout the country for designation as geological NHAs (Natural Heritage Areas). This is addressed by the Geoheritage Programme of Geological Survey Ireland, under 16 different geological themes, in which the minimum number of scientifically significant sites that best represent the theme are rigorously selected by a panel of theme experts.

County Geological Sites (CGSs), as adopted under the National Heritage Plan, include additional sites that may also be of national importance, but which were not selected as the very best examples for NHA designation. All geological heritage sites identified by Geological Survey Ireland are categorised as CGS pending any further NHA designation by NPWS. CGSs are now routinely included in County Development Plans and in the GIS of planning departments, to ensure the recognition and appropriate protection of geological heritage within the planning system. CGSs can be viewed online under the Geological Heritage tab on the online Map Viewer.

The audits for Co. Monaghan and Co. Meath were carried out in 2013 and 2007 respectively. The full report details can be found <a href="https://example.com/here">here</a> and <a href="https://example.com/here">here</a>. Our records show that there is no CGS in the vicinity of the landfill and processing facility at Lisnabow, Kilmainhamwood, Kells, County Meath. There is a CGS located within the mining operations located at Knocknacran, Co.Monaghan.

**Knocknacran Gypsum Mine**, Co. Monaghan (GR 281006, 299448), under IGH themes: IGH7 Quaternary, IGH9 Upper Carboniferous and Permian, and IGH15 Economic Geology. Further information can be found in the site report: MN010.

The Irish Geological Heritage Programme has numerous working quarries on its database where there are significant geological sections or features exposed within the quarry, and it is never the intention to prevent ongoing extraction. In fact, new exposures through quarrying may reveal new features of interest to the geologist, and we have in the past requested that periodic monitoring of the new faces be permitted.

Geological Survey Ireland would request that the operator might assist our geological heritage goals with the following (and ideally this would be written into the restoration / closure plan) and be included as a condition of planning as deemed appropriate by the planning authority:

- 1. Allowing access to quarry faces by appropriate scientists (upon request and with due regards to Health and Safety requirements) during quarrying to check for interesting new stratigraphies / relationships as they might become exposed and to establish if the quarry site is worthy of recognition post extraction and through aftercare/restoration planning.
- 2. If deemed appropriate in (1) above, leaving a representative section of the quarry face at the end of the quarry life or inclusion of information panels to promote the geology to the public or develop tourism or educational resources if appropriate depending on the future use of the site. Natural exposures are few, or deeply weathered, this measure would permit on-going improvement of geological knowledge of the subsurface.

The Geoheritage Programme tries to promote a partnership between geological heritage and active quarrying, with such measures as those outlined in the 'Geological Heritage Guidelines for the Extractive Industry', which can be downloaded <a href="https://example.com/here">here.</a>. This document, written in association with Irish Concrete Federation, acts as a comprehensive guide in the sustainable extraction of natural resources while preserving the geological heritage of Ireland.

### **Groundwater**

Geological Survey Ireland's <u>Groundwater and Geothermal Unit</u>, provides advice, data and maps relating to groundwater distribution, quality and use, which is especially relevant for safe and secure drinking water supplies and healthy ecosystems.

Proposed developments and emissions licensing applications need to consider any potential impact on specific groundwater abstractions and on groundwater resources in general. We recommend using the groundwater maps on our <a href="Map viewer">Map viewer</a>. which should include: wells; drinking water source protection areas; the national map suite - aquifer, groundwater vulnerability, groundwater recharge and subsoil permeability maps. For areas underlain by limestone, please refer to the karst specific data layers (karst features, tracer test database; turlough water levels (gwlevel.ie). Background information is also provided in the Groundwater Body Descriptions. Please read all disclaimers carefully when using Geological Survey Ireland data.

The Groundwater Karst viewer indicates the presence of a karst spring 1km north of the Knocknacran mine site. As stated in the EIAR, the Groundwater Resources (Aquifer) indicates the site is primarily underlain by a 'Poor Aquifer - Bedrock which is Generally Unproductive except for Local Zones', though a 'Locally Important Aquifer - Bedrock which is Generally Moderately Productive' underlies the margins of the mine site.

The Groundwater Vulnerability map indicates variable groundwater vulnerability within the area of the Knocknacran mine site. We would therefore recommend use of the Groundwater Viewer to identify areas of High to Extreme Vulnerability in your assessments, as any groundwater-surface water interactions that might occur would be greater in these areas.

As stated in the EIAR, there are Public Water Supply Schemes located 1.2km (<u>Kingscourt Mullantra PWS</u>), and 2km (<u>Kingscourt PWS</u>), from the Knocknacran mine respectively.

The Groundwater Data Viewer indicates two aquifers classed as a 'Poor Aquifer - Bedrock which is Generally Unproductive except for Local Zones' and a 'Poor Aquifer - Bedrock which is Generally Unproductive', underlie the landfill and processing facility at Lisnabow, Kilmainhamwood, Kells, County Meath. The Groundwater Vulnerability map indicates the area covered is classified as 'High' Vulnerability.

The Groundwater Protection Response overview and link to the main report is here: https://www.gsi.ie/en- $\underline{ie/programmes-and-projects/groundwater-and-geothermal-unit/projects/protecting-drinking-water/what-is-drinking-water/whit-is-drinking-water/whit-is-drinking-water/whit-is-drinking-water/whit-is-drinking-water/whit-is-drinking$ drinking-water-protection/county-groundwater-protection-schemes/Pages/default.aspx

I hope that these comments are of assistance, and if we can be of any further help, please do not hesitate to contact me Clare Glanville, or my colleague Trish Smullen at GSIPlanning@gsi.ie.

Yours sincerely,

Clare Glanville **Senior Geologist**
