Subject: Dumping at Sea Permit application, S0036-01,

Dear Sir/Madam,

In relation to the application of: Dumping at Sea Permit application, S0036-01.

The location of the dredging operation is in close proximity to the Miltown river estuary (Miltown (Kerry) _030). This is an important Salmonid River with Salmon and Trout spawning throughout the system. Catch and release angling in the lower tidal areas.

Migratory fish will ascend from October to January and descend from April to June inclusive.

It is important that any works will not negatively impact on the important species migratory routes.

Please feel free to discuss further if required.

Regards

Karen Griffin
