ASSESSMENT OF IMPACT ON RECEIVING SURFACE WATER

ATTACHMENT I2 – ASSESSMENT OF IMPACT ON RECEIVING SURFACE WATER

Details of the existing surface water environment and the impact of the proposed remediation scheme and associated emissions thereon are provided in Section 6 of the Environmental Impact Statement.

Details of surface water quality in existing ponds around Roadstone Dublin's landholding and in the Burgess stream to the south-east of its landholding (the only watercourse in the immediate vicinity) are provided in Appendix 6C of the Environmental Impact Statement.

The proposed remediation scheme makes no provision for on-site treatment of leachate. All leachate produced at the engineered landfill or potentially contaminated surface water arising over paved areas will be collected and transferred off-site to a local wastewater treatment plant. There will be no discharge of leachate or potentially contaminated surface water run-off to existing surface watercourses. A surface water management plan will be implemented to minimise the amount of surface water run-off coming into contact with buried waste and potentially contaminated soil.
