ATTACHMENT I3 – ASSESSMENT OF IMPACT ON SEWER DISCHARGE

There is currently no discharge to Local Authority sewers in the vicinity of the site. All leachate produced at the engineered landfill or potentially contaminated surface water arising over paved areas will be collected and transferred off-site to a local wastewater treatment plant. The proposed remediation scheme makes no provision for on-site treatment of leachate or discharge of leachate to local sewers.

Wicklow County Council, having previously been advised of the likely quantity and quality of the leachate generated by the proposed engineered landfill has agreed in principle to accept leachate at one of its wastewater treatment plants (refer to Attachment D4).
