## **Section I – Conditioning Plan**

---

### **Section 1.1 – Conditioning Plan**

As this has been completed and all work approved by the Agency following submission of the Waste Licence Application 55-1, STI propose to repeat all procedures regarding the internal modification of the 420 Beech Road Building, the commissioning testing of the equipment (including bund testing) and the continuous environmental and efficacy monitoring which will be conducted in line with current operations.

### **Section 1.2 – Environmental Management System**

STI have put in place a comprehensive Environmental Management System for the current site at 430 Beech Road which STI regularly reviewed by both STI and the Agency. STI acknowledges that the proposed transfer station operation will involve some revision of this. All new procedures, particularly those regarding the transfer station and any waste recovery, will be submitted to the Agency for approval prior to commencement.
