14. INTERACTION OF FACTORS

There will be interactions between a number of environmental factors discussed in the EIS and these interactions have been addressed throughout the EIS in the individual Sections. The principal interactions are listed in Table 14.1.

Table 14.1: Interaction of Factors

Environmental Factor	Potential for Interaction With	Interaction Addressed in Section
Air Quality	Human Environment	Section 4
	Flora and Fauna	Section 10
	Soils	Section 4 & Section 8
	Surface Water	Section 9
	Climate	Section 4 & Section 10
	, diter use.	
Landscape & Visual Impact	Human Environment	Section 3 & Section 6
Noise grand	Heman Environment	Section 5
Traffic Conservation	Human Environment	Section 3
	Air Quality	Section 4
	Noise	Section 5
	Material Assets	Section 13

The interaction between the different environmental factors has been addressed in the preceding sections of the EIS. Taking into account all of the environmental impacts of the development and interactions between the different environmental factors, the development will not have a significant negative impact on the environment. Where negative impacts have been identified, mitigation measures will be put in place to minimise them.

It will have a positive impact in terms of contributing to the development of sustainable waste management practices and providing a source of renewable energy in line with EU and Government policy.
