## G1.1 DECOMISSIONING

### 1. GENERAL

The waste processing facility has a projected life span of a minimum of 20 years. However, this can be extended with maintenance/replacement of items of equipment. Should circumstances arise whereby it becomes necessary to shut down the facility, then Indaver Ireland will take the following measures to avoid any pollution risk and return the site of operation to a satisfactory state:

- Removal of any chemicals or wastes stored on site. Any oils, lubricants or fuels that are on site at the time of closure will be disposed of/recycled through appropriate registered contractors.
- Plant equipment, machinery etc. will be cleared out post final operation, dismantled and stored under suitable conditions until it may be sold, or if a suitable buyer cannot be located, disposed of/recycled through appropriate licensed waste disposal contractors.
- The plant buildings will be subject to thorough house cleaning procedures prior to final departure.
- The site and buildings will be left in a secure manner and appropriate security maintained on site in the event of the site potentially being vacant for an extended period of time.
- There will be no asbestos used in the construction of the facility so its decommissioning will not arise.
- A bond will be purchased to provide a source of funding for decomissioning and restoration in the unlikely event of insolvency.

### Aftercare Management Plan

#### Contents

**Due to the nature of this facility (i.e. as no materials will be stored or landfilled on site) there will be no emissions from this facility after cessation of activities and decommissioning, an aftercare management plan will not be required and therefore this attachment is not applicable.**
