

	Licensing Unit Office of Licensing and Guidance
To:	Directors
From:	Paddy Nolan Programme Manager
Date:	31 January 2006
Subject:	Waste application 221-1

During the Boards consideration of the recommendation of the licensing unit the Board sought the views of the OEE with regard to historic waste on the site.

The OEE reports together with a supporting report from the licensing unit has now been completed and are submitted for consideration by the Board.

The reports are self explanatory and deal solely with the historic waste deposited at this site with particular regard to the Ministerial direction regarding illegal waste disposal sites and possible impacts of such waste on groundwater at this site.

The overall recommendation from the licensing unit remains as outlined in Dr. T.McLoughlin's report to the board having regard to the technical advice available within the unit and the technical information provided by the applicant.

I should point out that

- additional conditions regarding the monitoring of groundwater (additional boreholes) and / or
- increases in the frequency of monitoring

can be included in the PD should the Board consider it necessary.
