Re: W0205-01 - Waste Licence Application A.I., Greyhound Recycling and Recovery, Crag Ave., Clondalkin Ind. Estate, Co. Dublin.

Dear Miss O'Keefe,

In relation to the above waste application A.I. please find below a list of our observations.

The surface water from the site will be discharging to the River Camac which is a tributary of the River Liffey, a Salmonid system. All measures necessary should be implemented to protect the aquatic ecological integrity of this system in the first place by complete impact avoidance and as a secondary approach through mitigation and remediation.

BAT mitigation measures must be fully implemented to ensure protection of the downstream surface water system. It is important to note that comprehensive on site housekeeping and infrastructural initiatives are required in order to achieve this goal. Some areas of concern would be effective separation of wastewater streams (foul water from surface water) and the management of on-site leachate, hazardous liquid and runoff from site operations such as vehicle washing and road sweeping. It would also be prudent to carry out a daily visual check on all surface water discharges as well as carrying out regular analysis for standard parameters.

Yours sincerely,

Pat Doherty
Acting Chief Executive Officer
