

Dear Sirs

Below are submissions 1 and 2 regarding the proposed toomen/nevit super dump

(1)

It has come to my attention the council intend to relocate certain species that can be found here

Having a knowledge of wildlife and the conditions necessary for its existence it is obvious to me that this will solve nothing regarding the well being of any species due to the fact that the habitat (which is of an irreplaceable high quality) will be lost forever. It is a known fact that any species depends on quality and quantity of habitat. Relocating individuals of any species is only white washing this fact.

(2)

Another relatively pointless attempt to replace what will be lost is landscaping the area afterwards. This form of manicured landscape placed on top of a mound of rubbish is hardly any substitute for the long established natural habitats and countryside that we in Fingal are so lucky to have at the moment here. In this supposed age of environmental awareness we should be striving to preserve the few areas of this nature that we are left with.

Yours sincerely

Damian Christie
