Dr. Ian Murnane  
EPA  
Johnstown Castle Estate  
Co. Wexford

Ref. Application of Fingal County Council for a waste licence  
at Nevitt, Co.Dublin

Dear Dr. Murnane,

1. Further to my submission of the 5<sup>th</sup> Feb.07, it was necessary to obtain water monitoring borehole data for the till within the landfill footprint, which had been omitted from the EIS and subsequent applicant documentation. This data has now been obtained from Fingal County Council and is hereby attached for your information. A hydrogeological and geotechnical inspection of this data would help to clarify many of the difficult issues associated with the site, and we hereby request the EPA to carry out such a study, as the applicant has failed to do so in the EIS.
2. In order to facilitate a study of the borehole data I have attached a site map identifying the location of bedrock monitoring boreholes and those boreholes to which monitoring standpipes were not fitted.
3. The new borehole data in particular will allow for the comparison of groundwater levels in the bedrock with levels in overlying gravel and till, the calculation of local vertical and horizontal groundwater gradients, and a more accurate scientific assessment of the site vulnerability.
4. With reference to the comments of Dr. Paul Ashley, (report dated 31<sup>st</sup> August 06, para.4 p.4, and 7.2 p.9, and the Applicant in their reply to the EPA dated Jan 19, 07), in relation to hydraulic gradients within the landfill footprint, I would like to draw the

*For inspection purposes only  
consent of copyright owner required for any other use.*

following matters to your attention. (See attached copy of applicant's groundwater contour map, Sept.06)

- There is a **sudden pronounced drop in bedrock water level** in the south eastern half of the proposed landfill footprint (see attached map-sector 3). Bedrock groundwater levels drop from ~50metres to~32metres Mod on the western edge of the site and remain at this level right across to the eastern edge. The groundwater levels in the till overlying this 32metre zone averages 46metres (ES8, GR1, GS4, GR5). The **vertical hydraulic gradient** overlying the 32metre zone is therefore 14 metres, and vertical groundwater flow to the underlying gravel is correspondingly much larger than previously calculated, with consequential larger concentrations of leachate reaching groundwater and a **much higher vulnerability rating** for this half of the site. The effect has been compared to a large "**French Drain**".  
The question must also be asked "**Where is all this water going?**"? The Nevitt Lusk Action Group has repeatedly stated that the escaping groundwater is following a gravel pathway southwards into the **Fingal horticultural well-field** – proven valuable groundwater source. There is nothing in the EIS which disproves this i.e. bedrock groundwater contour lines are not necessarily related to flow directions in overlying gravel, and the southern extent of these gravel beds have not been determined in the EIS.
- In the Northern and Western sector of the landfill, (see map-sector 1) conditions in the bedrock and overlying till are essentially artesian. This gives rise to the necessity for **dewatering and groundwater control** - an engineering task which may be impossible to achieve essentially because the landfill is on a hillside, the bedrock is fractured and moderately productive, and is overlain by gravel at depths of up to 30metres. In such conditions how is groundwater control to be achieved? **The EIS fails to address this important geotechnical problem.**
- The position of the **pronounced drop in hydraulic gradient**, essentially along the western edge of the site, constitutes a distinctive transitional zone (see map-sector 2). It also roughly corresponds to the location of the 10 metre cut slope, and shifts with seasonal rainfall (see attached contour maps). Serious complex issues regarding slope instability, blowout, liner sidewall failure, liner slippage, and pore pressures within and without the liner arise in this sector. **The EIS fails to address these geotechnical issues also.**

*Consent of copyright owner required for any other use*

5. The attached copy of the Groundwater Contour Map submitted by the Applicant in Jan.07 differs from previous groundwater maps, in that the contour lines, at two metre intervals, are much more detailed than previous maps. The entire centre of the Corduff Valley lies between the 40 and 38metre contour lines and includes the north eastern section of the landfill site. The exact position of a water divide in the bedrock is thus difficult to determine. The position of a water divide in the overlying gravel is even more uncertain, although both bedrock and gravel maps indicate a gravel flowpath from the north-eastern sector of the proposed landfill towards **the Bog of Ring public water supply. The EIS fails to acknowledge the existence of this flowpath.**
6. We note the Applicants refusal to carry out a study, requested by the EPA, to estimate the extent of the water resource which would be compromised by the location of a landfill on this site. The presence of the resource has been identified by the GSI to lie directly east (and down gradient) of the proposed landfill. The Nevitt Lusk Action Group has consistently pointed out to the EPA that because of the presence of this resource **the EC Groundwater Directive would be contravened** by a landfill in the proposed location.
7. Dr. Paul Ashley of Matt McDonald consultants has now been requested by the Group to carry out a review of the new borehole data and this report will be forwarded to the EPA.

#### Conclusion

The Nevitt Lusk Action Group have gone to great lengths to assist the EPA in obtaining essential data and professional reports on subject matters which are vitally important and should have been included in the Applicants EIS. That this should have been necessary again points to the inadequacy of the EIS, and on this basis we feel totally justified in requesting the EPA to refuse this application.

Yours truly,

  
\_\_\_\_\_  
Patrick Boyle, BE.
