RE: Application for Waste Licence Ref. No. W0241-01 Greenstar Ltd., Clavass, Eniscorthy,
County Wexford

Dear Ms. Furlong,

On behalf of Greenstar Ltd., I enclose a drawing showing the revised site layout. The revision to the southern site boundary and internal layout was required in response to queries from the planning authority. The southern boundary has moved approximately 5m to the south of the original line. The acoustic barrier has also moved to the south.

The minor alteration to the boundary does not change the conclusions of the noise impact assessment. I enclose a letter from the noise consultants (Dixon Brosnan), who prepared the assessment, confirming this. I also enclose a revised drawing showing the proposed monitoring locations, which have changed due to the alterations in the site layout; the revised Non-Technical Summary and three electronic copies of all of the information.

I confirm that the faulty pump in the pumping station to the south of the application area has been replaced and that the sanitary authority has been informed of this.

The additional information compiled in response of requests from the planning authority, included the completion of an archaeological and architectural heritage survey; changes to the surface water drainage system to provide an on-site percolation area; changes to the car parking layout; changes to the building height and revised landscape measures to screen the site; and changes to the planning application area to include the entire Greenstar landholding. The latter was solely required to give comfort to the planning authority in relation to the provision of proper sight lines and landscaping.

Cont'd

The changes have required the amendment to the Environmental Impact Statement (EIS) and I enclose three hard copies and 16 electronic copies of the EIS CD-ROM discs.

If you have any queries, please call me.

Yours sincerely,

Jim O'Callaghan

Re: Proposed Greenstar facility at Enniscorthy, Co. Wexford.

Dear Michael,

I wish to confirm that I have received and reviewed drawing 1375-P-003 Rev-1 dated 10.04.08. The drawing shows a proposed relocation of the southern boundary of the site. It is now proposed to locate this boundary 3 m south of the original southern boundary. The proposed acoustic barrier will also be relocated.

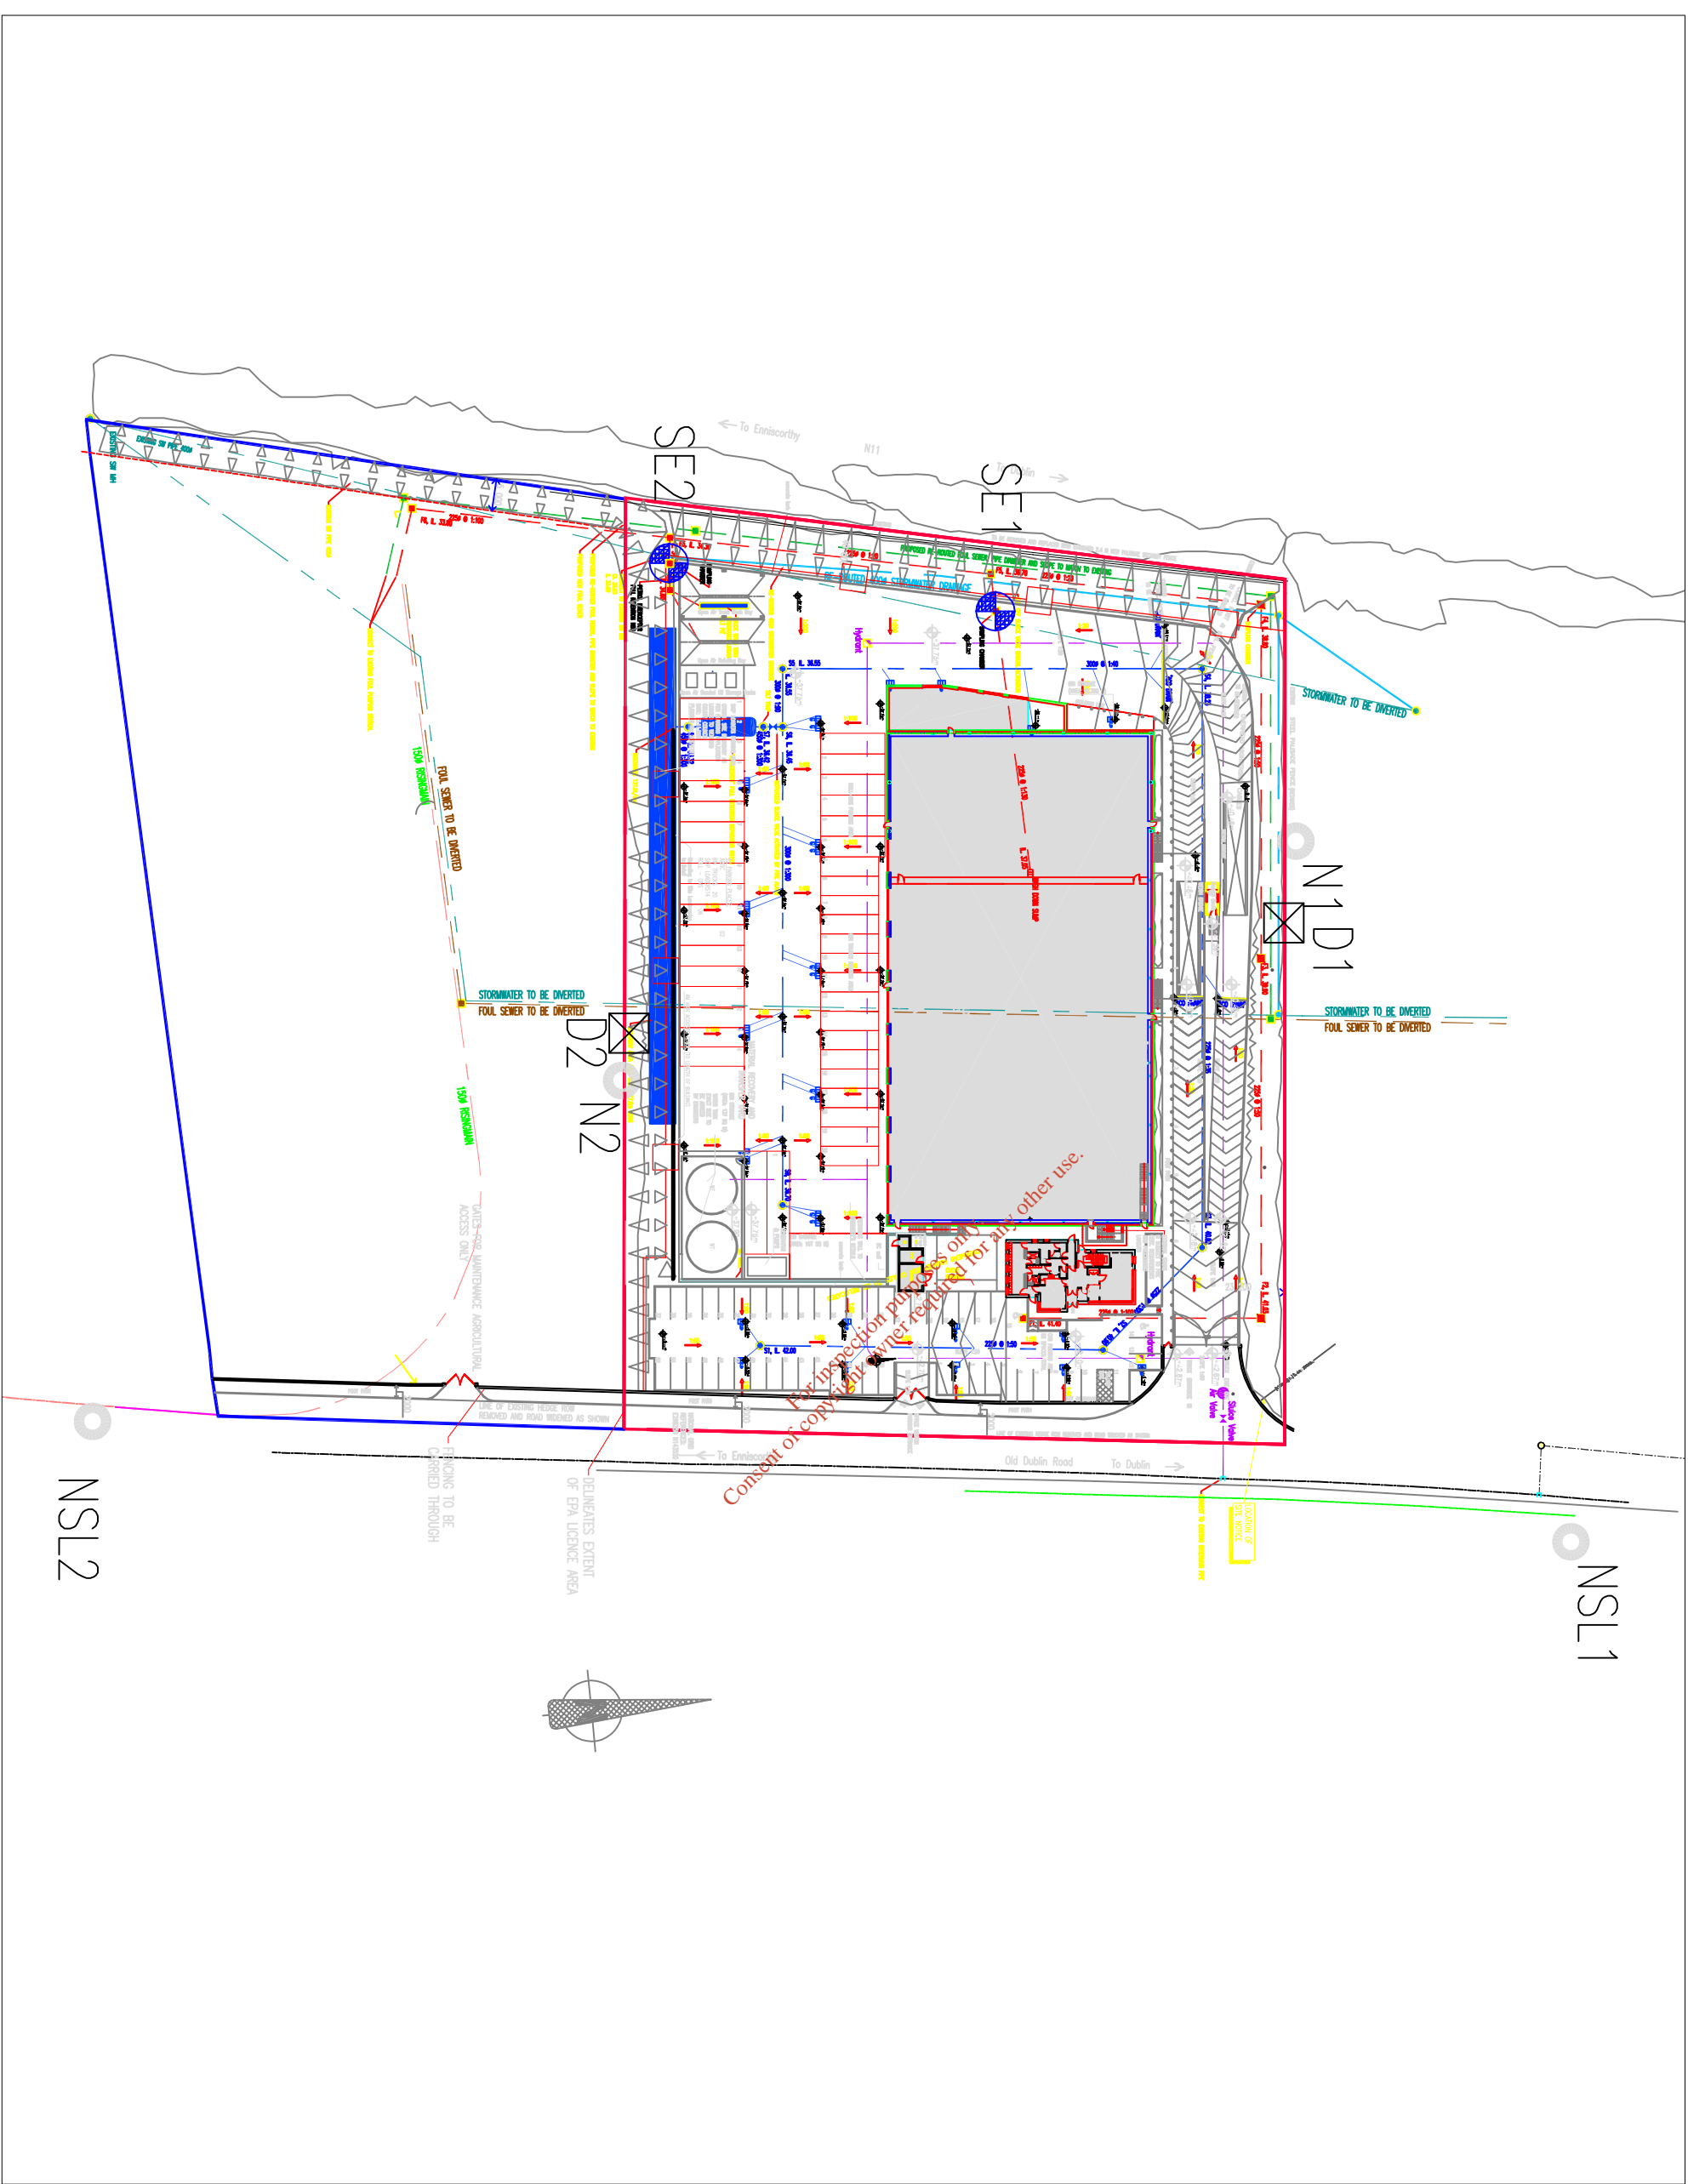

I wish to confirm that the proposed relocation will not affect offsite propagation of noise emissions. A relocation of at least 20 m would be required before any change would arise.

Please contact me if you have any queries.

Yours sincerely,

Damian Brosnan
