Section B Attachment B5

The file entitled “Application Form Attachment B5” related to the application in Shanganagh and was included in the application for Ringsend in error. This file has been replaced and is attached to this correspondence. Consequently there are now no overflows labelled with DLRCC/B5/S…

Discharges labelled DLRCC/B4/R… relate to pump station emergency overflows.

Section C

Pump Station	Duty	Standby Assist	Storage Capacity (m3)
West Pier PS	1	1	1 420
Bullock PS	1		1 3000
Blackrock PS	1		1 13
Tobernea PS	1		1 15
Brighton Vale	1		7
Rockland	1	1	7
Coliemore No.1 PS	1	1	488
Coliemore No.2 PS	1	1	26
St Helens PS	1	1	32

Further Detail

West Pier Pump Station
1 No duty/standby pumps

1No duty, 1 no assist and 1 no stand-by
1No pump running 800l/s 2No pumps running 1000 l/s

2. Measures in place in event of a power failure

No stand-by generation. In emergencies the storage tank and sump fill before spillage occurs.

3. Storage Capacity Details
Sump Volume 420m3 and storage tank 7400m3.

4. Design Criteria and Construction of Overflows
Designed to overflow 3 times per year. No fine screening provided.

Bullock Pump Station

1. No. of duty / standby pumps
1No duty, 1 no assist and 1 no stand-by
1No pump running 90 l/s 2No pumps running 160 l/s

2. Measures in place in event of a power failure

No stand-by generation. In emergencies spill to sea however upstream storage available would have to be mobilised first. There is a full telemetry system in place which is connected to DLRCC. In event of power failure at either / both pumping stations DLRCC will receive an alarm indicating same

3. Storage Capacity Details
On-line storage in upstream culvert estimated to be 3000m3 or some 9 hrs storage at DWF.

4. Design Criteria and Construction of Overflows
Designed to spill to twin sea outfalls 3 spills per bathing season. Tideflex valves (within pumping station site) on outfalls discharging below LAT. No fine screening provided.

Coliemore Pump Stations 1 and 2

1. No. of duty / standby pumps
PS1 - 1 no. duty / 1 no. standby – pumping at 12 l/s
PS2 - 1 no. duty / 1 no. standby – pumping at 15 l/s

2. Measures in place in event of a power failure

There is no standby generation in place. There is a full telemetry system in place which is connected to DLRCC. In event of power failure at either / both pumping stations DLRCC will receive an alarm indicating same.

Where PS2 only fails, the telemetry will halt flows being pumped from PS1 to PS2.

3. Storage Capacity Details
PS1 – total volume: 588 m^3, volume to level of overflow: 488 m^3. Note that there are also tank sewers immediately upstream of the pumping station, which provide additional storage capacity (circa 60 metres of 900 mm sewer)
PS2 – total volume: 29 m^3, volume to level of overflow: 26 m^3

In DWF conditions PS 1 has some 95 hours storage capacity and PS2 has some 32 hours storage capacity, assuming dry antecedent conditions.

4. Design Criteria and Construction of Overflows
PS1 – Designed to spill no more than 7 spills per bathing season, with screening to 6 mm in two dimensions. PS1 is a compartmentalised RC tank structure, with screened discharges to the 20 year return period and a higher level emergency overflow should events be larger / screen is blinded. Length of screen is 3.5 metres and higher level weir is 3.0 metres, discharging via existing 375 mm outfall. Tideflex valve has been installed on outfall.

PS2 – Designed to spill no more than 1 spill per annum. Telemetry is such that as level is sump approached the overflow level, PS1 is to halt pumping flows to PS2. PS2 is an RC sump, with 300 mm overflow

Section E

(i)The design criteria for the West Pier, Bullock and Coliemore Pump Stations are above. The other pump station overflows operate during emergencies only.

(ii) Frequency of Discharge of DLRCC/B4/R/001D (days/annum) <3.

(iii) The design criteria for the West Pier Pump Station are attached. The pumped flows are measured by telemetry and the duty pump flow of 800 l/s and the duty assist flow of 1000 l/s are as per the original design. The performance of the long and short sea overflows are the subject of a study currently underway. An initial analysis of the real flows entering the station during a rainfall event show them to be vastly higher than flows the station was designed to cater for. Consequently the frequency of discharge has greatly exceeded the 3 times per annum design figure.

Section F

There has not been a programme of sampling that can identify the impact of storm water overflows on surface waters in the county.

Section G

Dodder Valley Drainage Study

The study is to examine the catchment in DLRCC that feeds into the Dodder Valley Sewer. This catchment includes Dundrum, Clonskeagh, Churchtown and parts of Sandyford. The study will propose improvements to the catchment drainage system that will cater for existing and future development. The following overflows are within this catchment and may be affected; DLRCOCO/B5/001, DLRCOCO/B5/005, DLRCOCO/B5/006, DLRCOCO/B5/010, DLRCOCO/B5/011, DLRCOCO/B5/012, DLRCOCO/B5/013.

The Completion Date
The Projection is approved to planning stage in the Water Services Investment Programme.

The Source of Funding
DOEHLG, water services charges to non domestic customers and planning development contributions.

A description and quantification of the expected improvements with respect to relevant standards and legislation.

Unknown in detail at this stage. Improvements in the carrying capacity of the drainage system should reduce the frequency of overflows in the catchment.

Dun Laoghaire Sewerage Scheme Contract 4D

The study is to examine the the Dun Laoghaire catchment in detail. The study will propose improvements to the catchment drainage system that will cater for existing and future development. The following overflows are within this catchment and may be affected; DLRCOCO/B5/002, DLRCOCO/B5/003, DLRCOCO/B5/004, DLRCOCO/B5/007, DLRCOCO/B5/008, DLRCOCO/B5/009, DLRCOCO/B5/014, DLRCOCO/B5/015, DLRCOCO/B5/016, DLRCOCO/B5/017, DLRCOCO/B5/018, DLRCOCO/B5/019, DLRCOCO/B5/020, DLRCOCO/B5/021, DLRCOCO/B5/022, DLRCOCO/B5/023, DLRCOCO/B5/024, DLRCOCO/B5/025, DLRCOCO/B5/026 DLRCOCO/B5/027.

The Completion Date
The Projection is approved to planning stage in the Water Services Investment Programme.

The Source of Funding
DOEHLG, water services charges to non domestic customers and planning development contributions.

A description and quantification of the expected improvements with respect to relevant standards and legislation.

Unknown in detail at this stage. Improvements in the carrying capacity of the drainage system should reduce the frequency of overflows in the catchment.

The West Pier and Bullock Catchment Studies

These studies were completed in 2005 and had the following recommendations:

It is recommended that the Council proceed with the engineering design and construction of the following catchment improvements

1. The overflow between the manhole outside the Eagle House in Glasthule and Newtownsmith
2. The rehabilitation of the existing sewer in Sandycove Avenue North and the new CSO discharding to the sea behind Sandycove Baths
3. The proposed pilot project to reduce infiltration .

Engineering studies should be advanced in relation to the following:

1 Environmental improvements to the CSO's at Bullock and West Pier Pumping Stations
2 Advection and dispersion modelling of the existing overflows at West Pier and Bullock
3 Additional investigations into flooding at locations throughout the catchment and of exfiltration from the Board of Works culvert adjacent to the Peoples Park.

Coliemore Pump Station

This Pump Station was completed in 2008 and removes a permanent outfall into Coliemore Harbour, Dalkey. Details of the design criteria for the 2 pump stations are given above.

Waste Water Discharge Licence Application Form

Fingal Portion of Ringsend Agglomeration

D0034-01

Response to notice from EPA in accordance with Regulation 18(3)(b) of the Waste Water Discharge (Authorisation) Regulations 2007

Section C – Fingal County Council

Pumping Station Name	No of duty pumps	No of standby pumps	Storage Capacity (m^3)
Santry	1	1	34.6
Turnapin	1	1	
Dubber Cross	1	1	9.46
Portmarnock Strand	1	1	
Portmarnock Bridge	1	1	
Mayne Bridge	1	1	48
Baldoyle Village	1	1(Assist)	
(1 storm pump which pumps to overflow when duty/assist pumps are unable to handle flow)			
Baldoyle Road	1	2(Assist)	
Sutton Park	1	1	4.3
Strand Rd Sutton	1	1	
Burrow Road	1	2(Assist)	
(1 storm pump, 1 standby storm pump which pumps to overflow when duty/assist pumps are unable to handle flow)			
Claremont	1	-	
Techcrete	1	1	
Blanchardstown	1	1	56.5
River Rd Blanch	1	1	
Castlethorn/Riverwood	1	1	

As can be seen from the above table, there are no drawings and no information for some of the pumping stations. There is a program in place which started two years ago to survey the pumping stations and sumps as they are cleaned. This is ongoing.

The majority of the pumping stations are on telemetry and have an Uninterruptable Power Supply (UPS) with battery pack in the event of a power failure. In the event of a power failure, the telemetry (LOGICA) system alarms out. The alarms are picked up by the local inspector or are monitored in Leixlip Water Treatment Works which has a 24 hour presence. Staff are then assigned to the relevant pumping station.

There is no design calculations available for the storm overflows in the Fingal area. These were generally put in by the Area Engineers to relieve a reoccurring flooding problem until such time as the network could be improved. The pumping stations similarly were provided in the past with an overflow as a matter of course with little or no design involved other than level and fall. None of this design detail is available.

No further details on the secondary discharge has become available.

Section E - Fingal County Council

(i) Fingal-SW26: This is the overflow from the Baldoyle Village P.S. There is a major increase in flow to this P.S. during heavy rainfall which overwhelms the pumps. A storm pump is then called in which pumps to the overflow. Under the Dublin Bay Sewerage Scheme Contract 5/2 a new pumping station is to be built here. The Initial Report is with the DoEHLG and the new pumping station is expected to be completed within the next five years.

Fingal-SW43: This is an overflow in the grounds of Superquinn in Sutton. There is a siphon downstream of this point which blocks occasionally. The network is this area is also under pressure, especially during heavy rainfall. Under either of these conditions, the overflow comes into operation. Under Contract 5/1(b) of the Dublin Bay Sewerage Scheme a new pipeline is to be constructed in this area which will see the overflow being terminated. This work is expected to be completed by the end of 2009.

(ii) Monitoring Point 453-40: 315426E, 241106N
Monitoring Point 459-30: 316534E, 244960N
Monitoring Point 459-80: 322098E, 243114N

Section F – Fingal County Council

The overflows in this agglomeration affect the Irish Sea and the following rivers: Mayne, Sluice, Pinkeen, Tolka, Liffey, Santry and some un-named streams and ditches.

Mayne River: Waters were satisfactory for 2006 Dangerous Substances Report, and achieved compliance with the Phosphorus Regs for 2005 & 2006. The EPA Water Quality Report in 2005 states that it remains moderately polluted. However the one overflow to this river is located at the confluence with the sea and any overflow would not affect the sampling carried out for the above reports.

Sluice River. One exceedance for zinc was noted in the Dangerous Substances Report for 2005 and 2006. The river was not sampled under the Phosphorus regulations. The river was not sampled under the EPA Water Quality Report. There are two overflows to this river. Both are very close to the mouth of the river and would not affect the sampling points for the dangerous substances report.

Pinkeen River: One exceedance for zinc was noted in the Dangerous Substances Report for 2005 and 2006. MRP levels were elevated in the period 2005/2006 during sampling for the Phosphorus Report. The Water Quality Report 2005 notes that there were indications of a significant degree of water quality impairment during the survey period but also notes that the stream may run dry at times. There is one overflow from a private P.S., no information is available as to quantities of overflows.

Tolka River: Water quality was found to be satisfactory for the Dangerous Substances parameters for 2005/2006. In the Phosphorus Report for 2005/2006, it was noted that for the stretch of the river in the Fingal area, the station at Mulhuddard retained compliance with the Q value target but the station at Abbotstown, while improving, did not. In the Water Quality Report 2005, it was noted that the stretch of the river in the Fingal area was moderately polluted. There are five overflows into the Tolka. One of these is estimated by the inspector to overflow approximately 8 times a year. The overflows occur due to heavy rainfall. It is felt that the dilution of the sewage and the increased flow in the river when the overflows occur would mean that the effect of the overflows are minimal. Preliminary studies have commenced for the duplication of the 9C sewer which should alleviate the flow to this pump station.

Liffey River: The Liffey River is not sampled by Fingal Co Co under either the Dangerous Substances or the Phosphorus Regulations. In the Water Quality Report by the EPA in 2005, the Liffey in the area bordering Fingal is rated as moderately polluted. As there is only one overflow that discharges to the Liffey and this is estimated to occur once per year, and having regard to the flow in the river, it is felt that the overflow has little or no effect on the water quality in the Liffey.

Santry River: One exceedance for copper was noted in the Dangerous Substances Report for 2005/2006. The Santry was not sampled by Fingal under the Phosphorus Regulations. The EPA Water Quality Report shows improvement in the river since the previous report. There is one overflow, from the Santry P.S., which is estimated to occur approx 4 times a year. This occurs in times of heavy rainfall. It is felt that the the dilution of the sewage and the increased flow in the river at the overflow times means that the effects of the overflow is minimal.

Irish Sea: One exceedance for nickel was noted in the 2005/2006 Dangerous Substances Report. The Bathing Water Quality Report for 2007 shows that Portmarnock and Burrow beach in Sutton failed the EU Guide Limits and Burrow beach also failed the National Limit Value. There are 14 overflows that discharge to the Irish Sea in the Fingal area contributing to the Ringsend agglomeration. The local area inspectors estimate that 7 of these do not overflow in an average year. Baldoyle Village P.S. overflows an estimated 13 occasions a year, in periods of heavy rainfall. There are two overflows in Howth village that are both estimated to overflow on 6 occasions a year, again in periods of heavy rainfall or blockages in the sewers. Contract 5 of the Dublin Bay Sewerage Scheme will alleviate these overflows through the construction of a new pumphouse opposite the entrance to Howth Castle and new sewers from Howth village and through Sutton. These works are expected to be complete by the end of 2009.
It is felt that the main reason for the poor quality in the Sutton beach area is due to the discharge of raw sewage from the Nose of Howth from the Sutton/Howth area, and the discharge into Doldrum Bay of untreated sewage. The works going on at present under Contract 5/1 will capture the vast majority of the discharge from the Nose of Howth and under Contract 5/2 the rest of this discharge and that into Doldrum Bay will be captured and pumped to Ringsend. This Contract is due for completion before 2012.

Section G – Fingal County Council

Section G1: Compliance with Council Directives

Improvement 1: Dublin Bay Sewerage Scheme (Contract 5 Part 1)

At present, untreated sewage from the Howth and Sutton catchments is pumped into the North Dublin Drainage System where it is diverted into a tunnel that discharges off the nose of Howth. To ensure compliance with the EU UWWTD, Contract 5 (Part 1 – Howth & Sutton) will involve the upgrading of the sewerage collection network in the Howth and Sutton catchments and the provision of new pumping stations. These sewers will be connected to the Sutton Pumping Station, where the effluent will be pumped via the new submarine pipeline under Dublin Bay to the Ringsend Wastewater Treatment Plant. It is envisaged that these works will cost €14.28m and be completed by the end of 2009. The funding for the project will come from the DoEHLG's Water Services Investment Programme 2007-2009.

This Contract will end the discharge of untreated sewage from the Nose of Howth, (Fingal – S5), and alleviate the overflows from the following sites:- Fingal-SW42, Fingal-SW43, Fingal-SW46, Fingal-SW47, Fingal-SW48 and Fingal-SW49.

Improvement 2: Dublin Bay Sewerage Scheme (Contract 5 Part 2)

This Contract relates to other improvements to the drainage system within the catchment and includes additional works in the Howth, Sutton, Baldoyle and Portmarnock areas. This will effect the discharge of untreated sewage into Doldrum Bay (Fingal-S4). Work is not expected to start before 2009 and should be complete by 2012. The funding will come from the DoEHLG's Water Service Investment Programme 2007-2009 and from development levies on the basis of the Water Pricing Policy.

This Contract will end the discharge of untreated sewage into Doldrum Bay, (Fingal – S4), and alleviate the overflows from the following sites:- Fingal-SW26, Fingal-SW27, Fingal-SW38 and Fingal-SW41.

Improvement 3: Blanchardstown Regional Drainage Scheme.

This Scheme will 1) upgrade the existing network within the contributing catchment; 2) Duplicate the existing 9C trunk sewer and provide offline storage; 3) refurbish the River Liffey siphons and 4) refurbish the existing 9C trunk sewer. This project will be funded by the Water Services Investment Programme and by development levies on the basis of the Water Pricing Policy. The estimated cost of this project is €90m. The planning for this Scheme has commenced and the Scheme is expected to be complete by 2012.

This Scheme will alleviate overflows from the following points:- Fingal-SW51, Fingal-SW54 and Fingal-SW55.

Improvement 4: Santry Pump Station Scheme.

This Scheme will replace the existing pumping station at Santry Close. The existing station is overloaded and discharging untreated sewage to the Santry River at times of high rainfall. The project will be funded by development levies and is estimated to cost €0.45m. The scheme is expected to commence in late 2008 and be complete in 2009.

The scheme will alleviate overflows from discharge point Fingal-SW21.

The improvements listed above will ensure compliance with the Dangerous Substances Directive 2006/11/EC, the Water Framework Directive 2000/60/EC, the Birds Directive 79/409/EEC, the Groundwater Directives 80/68/EEC & 2006/118/EC, the Drinking Water Directives 80/778/EEC, the Urban Waste Water Treatment Directive 91/271/EEC, the Habitats Directive 92/43/EEC, the Environmental Liabilities Directive 2004/35/EC and the Bathing Water Directive 76/160/EEC.

Section G2: Compliance with Water Quality Standards for Phosphorus Regulations (S.I. No 258 of 1998).

Please see Attachment G2 (Phosphorus Regulations 4th Implementation Report Ju;y 2006) in original application. Details of the programme of improvements and their implementation are on pages 10 to 13 of the Report.

The actions listed therein will ensure compliance with Water Quality Standards for Phosphorus Regulations.

Section G3: Impact Mitigation

Improvement 1: Dublin Bay Sewerage Scheme (Contract 5 Part 1)

At present, untreated sewage from the Howth and Sutton catchments is pumped into the North Dublin Drainage System where it is diverted into a tunnel that discharges off the nose of Howth. To ensure compliance with the EU UWWTD, Contract 5 (Part 1 – Howth & Sutton) will involve the upgrading of the sewerage collection network in the Howth and Sutton catchments and the provision of new pumping stations. These sewers will be connected to the Sutton Pumping Station, where the effluent will be pumped via the new submarine pipeline under Dublin Bay to the Ringsend Wastewater Treatment Plant. It is envisaged that these works will cost €14.28m and be completed by the end of 2009. The funding for the project will come from the DoEHLG's Water Services Investment Programme 2007-2009.

This Contract will end the discharge of untreated sewage from the Nose of Howth, (Fingal – S5), and alleviate the overflows from the following sites:- Fingal-SW42, Fingal-SW43, Fingal-SW46, Fingal-SW47, Fingal-SW48 and Fingal-SW49.

Improvement 2: Dublin Bay Sewerage Scheme (Contract 5 Part 2)

This Contract relates to other improvements to the drainage system within the catchment and includes additional works in the Howth, Sutton, Baldoyle and Portmarnock areas. This will effect the discharge of untreated sewage into Doldrum Bay (Fingal-S4). Work is not expected to start before 2009 and should be complete by 2012. The funding will come from the DoEHLG's Water Service Investment Programme 2007-2009 and from development levies on the basis of the Water Pricing Policy.

This Contract will end the discharge of untreated sewage into Doldrum Bay, (Fingal – S4), and alleviate the overflows from the following sites:- Fingal-SW26, Fingal-SW27, Fingal-SW38 and Fingal-SW41.

Improvement 3: Blanchardstown Regional Drainage Scheme.

This Scheme will 1) upgrade the existing network within the contributing catchment; 2) Duplicate the existing 9C trunk sewer and provide offline storage; 3) refurbish the River Liffey siphons and 4) refurbish the existing 9C trunk sewer. This project will be funded by the Water Services Investment Programme and by development levies on the basis of the Water Pricing Policy. The estimated cost of this project is €90m. The planning for this Scheme has commenced and the Scheme is expected to be complete by 2012.

This Scheme will alleviate overflows from the following points:- Fingal-SW51, Fingal-SW54 and Fingal-SW55.

Improvement 4: Santry Pump Station Scheme.

This Scheme will replace the existing pumping station at Santry Close. The existing station is overloaded and discharging untreated sewage to the Santry River at times of high rainfall. The project will be funded by development levies and is expected to cost €0.45m. The scheme is expected to commence in late 2008 and be complete in 2009.

The scheme will alleviate overflows from discharge point Fingal-SW21.

The improvements listed above will ensure compliance with the Dangerous Substances Directive 2006/11/EC, the Water Framework Directive 2000/60/EC, the Birds Directive 79/409/EEC, the Groundwater Directives 80/68/EEC & 2006/118/EC, the Drinking Water Directives 80/778/EEC, the Urban Waste Water Treatment Directive 91/271/EEC, the Habitats Directive 92/43/EEC, the Environmental Liabilities Directive 2004/35/EC and the Bathing Water Directive 76/160/EEC.

Section G4: Storm Water Overflows

Improvement 1: Dublin Bay Sewerage Scheme (Contract 5 Part 1)

At present, untreated sewage from the Howth and Sutton catchments is pumped into the North Dublin Drainage System where it is diverted into a tunnel that discharges off the nose of Howth. To ensure compliance with the EU UWWTD, Contract 5 (Part 1 – Howth & Sutton) will involve the upgrading of the sewerage collection network in the Howth and Sutton catchments and the provision of new pumping stations. These sewers will be connected to the Sutton Pumping Station, where the effluent will be pumped via the new submarine pipeline under Dublin Bay to the Ringsend Wastewater Treatment Plant. It is envisaged that these works will cost €14.28m and be completed by the end of 2009. The funding for the project will come from the DoEHLG's Water Services Investment Programme 2007-2009.

This Contract will end the discharge of untreated sewage from the Nose of Howth, (Fingal – S5), and alleviate the overflows from the following discharge points:- Fingal-SW42, Fingal-SW43, Fingal-SW46, Fingal-SW47, Fingal-SW48 and Fingal-SW49.

Improvement 2: Dublin Bay Sewerage Scheme (Contract 5 Part 2)

This Contract relates to other improvements to the drainage system within the catchment and includes additional works in the Howth, Sutton, Baldoyle and Portmarnock areas. This will effect the discharge of untreated sewage into Doldrum Bay (Fingal-S4). Work is not expected to start before 2009 and should be complete by 2012. The funding will come from the DoEHLG's Water Service Investment Programme 2007-2009 and from development levies on the basis of the Water Pricing Policy.

This Contract will end the discharge of untreated sewage into Doldrum Bay, (Fingal – S4), and alleviate the overflows from the following sites:- Fingal-SW26, Fingal-SW27, Fingal-SW38 and Fingal-SW41.

Improvement 3: Blanchardstown Regional Drainage Scheme.

This Scheme will 1) upgrade the existing network within the contributing catchment; 2) Duplicate the existing 9C trunk sewer and provide offline storage; 3) refurbish the River Liffey siphons and 4) refurbish the existing 9C trunk sewer. This project will be funded by the Water Services Investment Programme and by development levies on the basis of the Water Pricing Policy. The estimated cost of this project is €90m. The planning for this Scheme has commenced and the Scheme is expected to be complete by 2012.

This Scheme will alleviate overflows from the following points:- Fingal-SW51, Fingal-SW54 and Fingal-SW55.

Improvement 4: Santry Pump Station Scheme.

This Scheme will replace the existing pumping station at Santry Close. The existing station is overloaded and discharging untreated sewage to the Santry River at times of high rainfall. The project will be funded by development levies and the estimated cost is €0.45m. The scheme is expected to commence in late 2008 and be complete in 2009.

The scheme will alleviate overflows from discharge point Fingal-SW21.

The improvements listed above will ensure compliance with the Dangerous Substances Directive 2006/11/EC, the Water Framework Directive 2000/60/EC, the Birds Directive 79/409/EEC, the Groundwater Directives 80/68/EEC & 2006/118/EC, the Drinking Water Directives 80/778/EEC, the Urban Waste Water Treatment Directive 91/271/EEC, the Habitats Directive 92/43/EEC, the Environmental Liabilities Directive 2004/35/EC and the Bathing Water Directive 76/160/EEC.

B.10 Capital Investment Programme

The upgrade (Phase 2A & B) which commenced in late 2007 for the Ashbourne /Ratoath / Kilbride conglomeration will reduce the risks of untreated discharges to the Broadmeadow River and also cater for ongoing and future developments in these areas. The total contract value is circa €12M for civil and mechanical / electrical works. This contract will include the provision of an additional storm holding tank at Ashbourne with a storage capacity of 1,920 cubic metres to augment the existing storm tanks (converted from treatment tanks as part of capital works in 2000) which have combined total storage capacity of 850 cubic metres, making a total of 2,770 cubic metres. This phase of works also includes the provision of a new storm tank at Ratoath, with a total storage of 1,700 cubic metres. The Ratoath facility at present has no storm storage.

The main pumping station in Kilbride does not and will not have storm storage. In the event of high levels been reached in the sump at this station a signal is sent to both Ashbourne and Ratoath main pumping stations to shut down the pumps at these stations. There is a small pumping station serving the council housing estate in Kilbride which has sufficient storage for 24 hours in the event of a mechanical or electrical breakdown. This station discharges to header manhole chamber into which the pumping mains from Ashbourne and Ratoath discharge. These combined flows flow to main Kilbride station in a sealed gravity sewer line for a distance of 400 metres approximately.
There is an emergency overflow provided at high level from sump of main station to a small stream that borders the site of the pumping station.

A new 250mm pumping main between Ratoath & Kilbride is also being provided to augment the existing 200mm diameter main that was laid in 2000. The contract also includes the upgrading of all pumps and controls at Kilbride and Ashbourne main pumping stations and the provision of a totally new pumping station station in Ratoath

A sum of € 3.5 M will be allocated for rehabilitation on sewer networks under Phase 2B, making total of €15.5 M. which is scheduled for completion in 2008/9

Phase 2 C by 20015 @ estimate of € 5.5 M will include duplication of pumping mains between Ashbourne and Kilbride and likewise between Kilbride and Mullhuddart. The pumping station at Kilbride would also be upgraded under this phase.

Ashbourne / Ratoath / Kilbride Sewerage Scheme

Existing and Proposed Pumping Capacities

Location	Existing Pumping Capacity	Pumping Capacity Proposed Up to 2015 (Phases 2A&B)	Pumping Capacity Proposed from 2015 Up to 2023 (Phase 2C)
Ashbourne	85 l/s or 7,344 m³/d	90 l/s (2xDWF) or 7,776 m³/d	150 l/s (2.5xDWF) or 12,960 m³/d
Ratoath	32 l/s or 2,765 m³/d	58.5 l/s (2xDWF) or 5,055 m³/d	64 l/s (2xDWF) or 5,530 m³/d
Kilbride	120 l/s or 10,368 m³/d	148.5 l/s or 12,830 m³/d	214 l/s or 18,490 m³/d

Section C – Meath

The pumping stations serving the Ashbourne, Ratoath and Kilbride agglomeration are equipped as follows ;

Kilbride Main Station ; 3 No. pumps configured in a duty / assist / stand – by mode. This station is equipped with a stand – by generator that is housed and muffled. It can maintain pumping capacity in the event of a power outage. This station does not have storm water storage tanks.

Kilbride Housing, Station ; 2 No. pumps to act in a duty / stand – by configuration The pump sump at this station has sufficient capacity for 24 hours storage at 1 DWF.

Ratoath Main Station ; presently is equipped with 2 No. pumps to act in a duty / stand – by configuration. When the new pumping station is completed in late 2008 / early 2009, there will be 3 No. pumps to act in a duty / asssit / stand – by configuration.
The three smaller feeder stations in Ratoath are equipped with 2 No. pumps in each to act in a duty / stand – by configuration. Each of these feeder stations has storm water holding tanks, each with a capacity of approximately 200 cubic metres. This will make a combined total of 2,300 cubic metres storm storage when new main pumping station and storm holding tank is completed. This will give sufficient storage ultimately for 14 hours at 1 DWF

Ashbourne Main Station ; 3 No. pumps to act in a duty / assist / stand – by configuration. This station will have a total storm water storage capacity of 2,800 cubic metres when additional storm holding tank is completed in late 2008 / early 2009. This will give sufficient storage ultimately for 12 hours at 1 DWF
The three smaller feeder stations in Ashbourne are each equipped with 3 No. pumps to act in a duty / assist / stand - by configuration.
Pump station No.1 at Milltown Road does not have a storm holding tank. The capacity of the pump sump at this station has a storage capacity to cater for 18 hours at 1 DWF.
The two other feeder stations, Pump Station No2 at Millennium Park and Pump Station No3 at Castle Street each has storm water storage tanks with a capacity of 400 cubic metres. This will allow sufficient storage for 15 hours at 1 DWF.

All of the pumping stations are equipped with telemetry and in the event of any mal-function that gives rise to a critical alarm condition the relevant Caretaker is notified by text message. The stand – by generator at Kilbride Main Station will automatically take over in the event of a mains power outage at this location.

SECTION I: Joint DECLARATION

Joint Declaration [Note1]

I hereby make application for a waste water discharge licence/revised licence, pursuant to the provisions of the Waste Water Discharge (Authorisation) Regulations, 2007 (S.I. No. 684 of 2007).

I certify that the information given in this application is truthful, accurate and complete.

I give consent to the EPA to copy this application for its own use and to make it available for inspection and copying by the public, both in the form of paper files available for inspection at EPA and local authority offices, and via the EPA's website.

This consent relates to this application itself and to any further information or submission whether provided by me as Applicant, any person acting on the Applicant's behalf, or any other person.

Re: Notice in accordance with Regulation 18(3)(b) of the Waste Water Discharge (Authorisation) Regulations 2007.

Article 16 Compliance Requirements

Section A

To be completed by Dublin City Council

Section B - South Dublin County Council

(1) Section B.5

(i) For SDCCPS07b, the application states that this discharge is to cease in 2008, clarify whether the pumping station is to close or alternative measures proposed and clarify the date of cessation/decommissioning of the discharge.

Response

This overflow relates to the Ballymanagin Pumping Station. It is not intended to close or decommission this pumping station. From Drawing number SDCC PS 07 of the Article 16 Response it can be seen that there are two overflows on the inlet to the Pumping Station. It is intended to decommission one of these (SW22aSouthDublin).

(ii) For SDCCPS10a, clarify the type of discharge (e.g. an emergency discharge from the pump station, a discharge direct from a foul sewer caused by insufficient capacity, a storm water overflow etc.

Response
SDCCPS10a relates to an emergency discharge from the Tay Lane Pumping Station.

(iii) For SDCCSWO03, provide confirmation that this overflow has been decommissioned

Response
Airton Road
The FS that Bimeda discharges to has an overflow to the FS on the opposite side of the road (overflow from FS to FS). This overflow did not prevent sewer overflow at Bimeda. It is believed that this overflow failed to function when the FS to which it was connected surcharged (both FS in surcharge). Drainage Maintenance Division constructed an overflow from Bimeda`s connection to an adjacent stream (Priory Stream). The new Airton Road FS disconnected the original FS to FS overflow and directed it into the new pipeline. **This new scenario needs to be monitored to see if the overflow to stream can be dispensed with**. The reason for the overflow is to prevent wastewater flooding of Bimeda, an industrial premises on Airton Road.

(iv) For SDCCSWO04, 05a, 05b, 08, 11, and 12 provide dates for decommissioning of these overflows/cessation of discharges

Response
SDCCSWO04 – Avonmore Road
Avonmore Est.
The new Avonmore Foul Sewer fully removed the need for this overflow. The decommissioning was undertaken during April 2008 and is complete

SDCCSWO05a & b – Brookfield Cottage
The overflows at Brookfield Cottage are required until such time as the FS on Orchard Lane can be directed into the head of the new Watery Lane FS. This is being investigated in relation to the works programme.

SDCCSWO08 – Castleview Road / Watery Lane
The old main to which this overflow is attached now has a new storm overflow connected to the latest FS which was constructed by Direct Labour Division. Full decommissioning of the overflow should now be feasible however it will be necessary for the Area Drainage Inspector to monitor this during heavy weather to verify for certain that the new situation offers full relief before going ahead with decommissioning.

SDCCSWO11 – Springfield Avenue
The overflow at Springfield Avenue was temporarily sealed in December 2007, however in May 2008, a blockage occurred on the Foul Sewer resulting in an adjacent manhole surcharging. South Dublin County Council is currently looking a retaining this overflow, however, routine flushing of this main together with an improvement in the design of the overflow are being addressed.

SDCCSWO12 – Loretto Terrace
This overflow is currently temporarily sealed with a view to assessing the possibility of decommissioning.

(2) Attachment B.5
Hardcopy drawings / maps have been attached of the stormwater / emergency overflow points associated with the wastewater works.

(3) Section B.10

"B.10 Capital Investment Programme

State whether a programme of works has been prioritised for the development of infrastructure to appropriately collect, convey, treat and discharge waste water from the relevant agglomeration. If a programme of works has been prioritised provide details on funding, (local or national), allocated to the capital project. Provide details on the extent and type of work to be undertaken and the likely timeframes for this work to be completed.

***Attachment B.10** should contain the most recent development programme, including a copy of any approved funding for the project and a timeframe for the completion of the necessary works to take place."*

Attachment included	***Yes***	***No***
Documents from SDCC Infrastructural Project Tracking System. Also refer to GDSDS ***Preamble to Capital Works Programme 2008-2010*** ***Capital Works Programme 2008-2010***	***YES***	

Response
Attachments were included in the previous documentation, however these were submitted under Section G of the Application Form. The South Dublin County Council "3 Year Capital Investment Programme 2007 -2009" and the "SDCC Capital Infrastructural Projects 30/11/07" update have now been included in Section B.10.

The Preamble to Capital Works Programme 2008-2010 and the Capital Works Programme 2008-2010 has now been attached.

The Greater Dublin Strategic Drainage Study has been attached to the overall application by Dublin City Council and is available on the Dublin City Council's website.

Section C – South Dublin County Council

Provide details of the following:

- *Number of duty and standby pumps at each pumping station*
- *The measures taken in the event of power failure*
- *Details of storage capacity at each pump station*
- *Design criteria and construction for each storm water overflow, where applicable*

Response

Table Attached – SDCC Drainage Pump Stations – Mech Details – Section C
Also See Section C file on disk

Section E – South Dublin County Council

(i) Clarify whether all pump stations overflows are operated in emergency circumstances only or under any other circumstances

Response

The majority of pumping stations operated by South Dublin County Council operate only in emergency situations. Emergency overflows are very rare and normally due to catastrophic failure of the pump station. South Dublin County Council has put in place necessary supervision and telemetry alarm systems on all pump stations to ensure early detection of problems, so that such problems can be rectified prior to overflow situations. Supervision is carried out daily and the telemetry alarm signal is sent by phone / sms to the area drainage inspector or a deputy inspector in the event a pump failure of a high level sump alarm being activated. This is done on a 24/7 basis. An emergency crew on-call system is in place which also operates 24/7.

Ballymanagan Pump Station (SDCCPS07), Newcastle Ejector(SDCCPS08) / Newcastle Pump Station(SDCCPS09) and Rathcoole (Tay Lane) Pump Station(SDCCPS10) are occasionally prone to storm overflow situations. This occurs during prolonged heavy rain events and is due to infiltration of surfacewater into the foul sewers feeding the pumping stations. During such heavy rainfall events the capacity of the pumping station is compromised resulting in overflow situations. (In the case of the Newcastle Pumping Station, however, additional storage capacity of c.1125cu.m is available prior to any overflow scenario).

(ii) Provide an explanation for the frequency of discharge at SDCCPS9a and 10a and any mitigation measures proposed

Response
Newcastle Pump Station(SDCCPS09) and Rathcoole (Tay Lane) Pump Station(SDCCPS10) are occasionally prone to storm overflow situations. This occurs during prolonged heavy rain events and is due to infiltration of surfacewater into the foul sewers feeding the pumping stations. During such heavy rainfall events the capacity of the pumping station is compromised resulting in overflow situations. In the case of the Newcastle Pumping Station, however, additional storage capacity of c.1125 cu.m is available prior to any overflow scenario. The stated overflow rate in Annex 1 of <5 days/years relates to overflow from the pumping station into the attenuation holding tank. Overflow from this tank to the adjacent watercourse occurs less often.

(iii) Complete sections E.2 and E.3 for Phosphorous Regulations, Dangerous Substances Regulations and Water Framework Directive monitoring

E.2. Monitoring and Sampling Points

Programmes for environmental monitoring should be submitted as part of the application. These programmes should be provided as Attachment E.2.

Reference should be made to, provision of sampling points and safe means of access, sampling methods, analytical and quality control procedures, including equipment calibration, equipment maintenance and data recording/reporting procedures to be carried out in order to ensure accurate and reliable monitoring.

In determining the sampling programme to be carried out, the variability of the emission and its effect on the receiving environment should be considered.

Details of any accreditation or certification of analysis should be included.

Attachment E.2 *should contain any supporting information.*

Attachment included	**Yes**	**No**
Excel Spreadsheets have been included providing details of sampling points and monitoring locations – South Dublin. The points refer in the main to Phosphorous monitoring, Dangerous Substances monitoring and Water Framework Directive monitoring and not specifically to monitoring of overflow locations. Due to the occasional and intermittent nature of the overflow discharges the discharge locations are not sampled specifically for the purposes of the Wastewater Discharge (Authorisation) Regulations.		

E.3. Tabular data on Monitoring and Sampling Points

Applicants should submit the following information for each monitoring and sampling point:

PT_CD	***PT_TYPE***	***MON_TYPE***	***EASTING***	***NORTHING***	***VERIFIED***
Point Code Provide label ID's assigned in section E of application	*Point Type (e.g., Primary, Secondary, Storm Water Overflow)*	*Monitoring Type M = Monitoring S = Sampling*	*6E-digit GPS Irish National Grid Reference*	*6N-digit GPS Irish National Grid Reference*	*Y = GPS used N = GPS not used*

An individual record (i.e., row) is required for each discharge point. Acceptable file formats include Excel, Access or other upon agreement with the Agency. A standard Excel template can be downloaded from the EPA website at www.epa.ie. This data should be submitted to the Agency on a separate CD-Rom containing sections B.1, B.2, B.3, B.4, B.5, C.1, D.2 and F.2.

Response

Section Table E.3 attached

Section F – South Dublin County Council

Provide an assessment of the impact of storm water overflows in the agglomeration with reference to any available receiving water monitoring data and any other relevant data available. Identify any storm water overflows that may be causing surface water quality problems.

South Dublin has 15No. Storm Water Overflows (F/S to S/W connections), 13No. Pumping Station Emergency Overflows (Additional 1No. Planned), and 1No Siphon Overflow.

The majority of pump station overflows in South Dublin operate only in emergency situations. Emergency overflows are rare and normally due to catastrophic failure of the pump station. South Dublin County Council has put in place necessary supervision and telemetry alarm systems on all pump stations to ensure early detection of problems, so that such problems can be rectified prior to overflow situations. Supervision is carried out daily and the telemetry alarm signal is sent by phone / sms to the area drainage inspector or a deputy inspector in the event a pump failure of a high level sump alarm being activated. As stated in Section E, a small number of pumping stations do overflow on occasion. These pumping station, operate satisfactorily under normal circumstances, however, in prolonged periods of heavy rain they are prone to occasional overflows. Due to the fact that these overflows occur during periods of heavy prolonged rainfall, the affected watercourses are also in peak flow, thus their assimilative capacity is increased.

In relation to the 15No. Storm Water Overflows, South Dublin County Council is in the process of examining the possibility of decommissioning SDCCSWO03(Airton Road), SDCCSWO05(Brookfield Cottage – 1 of 2), SDCCSWO08(Castle View Rd / Watery Lane), SDCCSWO11(Springfield Avenue) and SDCCSWO12 (Loreto Tce). **SDCCSWO04(Avonmore Rd) was permanently decommissioned during April 2008).** In relation to decommissioning these overflows, South Dublin County Council, will in the first place, put temporary seals on them for a period of 12-18 months to assess the feasibility of decommissioning them permanently. In addition, the area drainage inspectors will monitor all overflows on an ongoing basis to assess the frequency of overflows and impacts of overflows on watercourses.

In relation to assessing the impact of storm water overflows in the agglomeration with reference to any available receiving water monitoring data and any other relevant data available, the data from phosphorous monitoring, dangerous substances monitoring and water framework directive monitoring does not provide evidence that storm water overflows in the agglomeration are impacting adversely on water quality.

Section G – South Dublin County Council

Provide a full response to Section G of the Application form. Separate answers for each of Section G.1, G.2, G.3 and G.4 are required. Your response shall give details of the improvements proposed for the South Dublin portion of the Ringsend agglomeration only. Your response shall specifically give details of the following:

- *The improvement planned*
- *The specific discharges it will affect*
- *The completion date*
- *The source of funding, and*
- *A description and quantification of the expected improvements with respect to relevant standards and legislation.*

SECTION G: PROGRAMMES OF IMPROVEMENTS

Advice on completing this section is provided in the accompanying Guidance Note.

G.1 Compliance with Council Directives

Provide details on a programme of improvements to ensure that emissions from the agglomeration or any premises, plant, methods, processes, operating procedures or other factors which affect such emissions will comply with, or will not result in the contravention of; the Dangerous Substances Directive 2006/11/EC, the Water Framework Directive 2000/60/EC, the Birds Directive 79/409/EEC, the Groundwater Directives 80/68/EEC & 2006/118/EC, the Drinking Water Directives 80/778/EEC, the Urban Waste Water Treatment Directive 91/271/EEC, the Habitats Directive 92/43/EEC, the Environmental Liabilities Directive 2004/35/EC and the Bathing Water Directive 76/160/EEC.

Attachment G.1 *should contain the most recent programme of improvements, including a copy of any approved funding for the project and a timeframe for the completion of the necessary works to take place.*

Attachment included	***Yes***	***No***
Preamble to Capital Works Programme 2008-2010		
Capital Works Programme 2008-2010		

Response.

See Attachment on hard file and electronic file for ***Preamble to Capital Works Programme 2008-2010 & Capital Works Programme 2008-2010***. Please refer to Programme 3 for all Drainage Capital projects.

Separate implementation reports are due for completion in June 2008 in accordance with the Dangerous Substances Regulations and Phosphorous Regulations. These reports will be submitted to the EPA by the statutory due date of 22nd June 2008.

South Dublin County Council has not identified specific measures for waste water works in previous measures / implementation reports however, measures have been implemented in the form of routine inspections of waste water works and in particular daily inspection of pumping stations. Telemetry alarm systems have been installed in all pumping stations which alert staff to breakdowns and high sump levels. Pumping Station performance can also be viewed remotely by inspectors via laptops. The telemetry systems have backup systems in the event of power failures.

A Project Management System(PMS) is being rolled out which will improve reporting of pumping station inspections and maintenance. This PMS system is an on-line system which will facilitate better reporting to the EHLG and EPA.

G.2 Compliance with Water Quality Standards for Phosphorus Regulations (S.I. No. 258 of 1998).

Provide details on a programme of improvements, including any water quality management plans or catchment management plans in place, to ensure that improvements of water quality required under the Water Quality Standards for Phosphorous Regulations (S.I. No. 258 of 1998) are being achieved. Provide details of any specific measures adopted for waste water works specified in Phosphorus Measures Implementation reports and the progress to date of those measures. Provide details highlighting any waste water works that have been identified as the principal sources of pollution under the P regulations.

Attachment G.2 *should contain the most recent programme of improvements and any associated documentation requested under Section G.3 of the application.*

Attachment included	***Yes***	***No***
Preamble to Capital Works Programme 2008-2010 ***Capital Works Programme 2008-2010*** ***Phosphorous Report 2006***		

Response

The implementation report under the Water Quality Standards for Phosphorous Regulations (S.I. No. 258 of 1998) is due for completion in June 2008. This reports will be submitted to the EPA by the statutory due date of 22nd June 2008.

Wastewater works in South Dublin County Council have not heretofore been identified as principal sources of pollution under the P Regulations. South Dublin County Council has no primary discharges. In addition, identified overflows do not discharge continuously and act only as emergency or storm overflows. The occasional discharges that do happen, occur when the assimilative capacity in receiving watercourses is at maximum. These overflows do not occur under normal circumstances.

South Dublin County Council has not identified specific measures for waste water works in the previous Phosphorus Measures Implementation reports however, measures have been implemented in the form of routine inspections of waste water works and in particular daily inspection of pumping stations. Telemetry alarm systems have been installed in all pumping stations which alert staff to breakdowns and high sump levels. Pumping Station performance can also be viewed remotely by inspectors via laptops. The telemetry systems have backup systems in the event of power failures.

G.3 Impact Mitigation

Provide details on a programme of improvements to ensure that discharges from the agglomeration will not result in significant environmental pollution.

Attachment G.3 *should contain the most recent programme of improvements, including a copy of any approved funding for the project and a timeframe for the completion of the necessary works to take place.*

Attachment included	***Yes***	***No***

Response

Ongoing routine maintenance by both the Drainage Maintenance Section and Mechanical Section ensures that discharges from the agglomeration do not result in significant environmental pollution. South Dublin County Council operates a 24/7 on-call drainage service whereby chokes and blockages on the system, that cause surgharging of the mains or overflows are dealt with as efficiently as possible. Alarm systems on the pumping stations allow for early detection of problems thus allowing time for both Mechanical and Drainage Crews to act. The move from manual recording of daily inspections and maintenance of pumping stations from diary application to the on-line PMS application will improve the reporting of these facilities and their performance to the EHLG and EPA.

The Capital Works Programme 2008-2010 give details of ongoing works to pump stations, of a capital nature. This includes pumps replacements / improvements and other significant plant additions and or replacements.

G.4 Storm Water Overflow

Provide details on a programme of improvements to ensure that discharges other than the primary and secondary discharges comply with the definition of 'storm water overflow' as per Regulation 3 of the Waste Water Discharge (Authorisation) Regulations, 2007.

***Attachment G.4** should contain the most recent programme of improvements, including a copy of any approved funding for the project and a timeframe for the completion of the necessary works to take place.*

Attachment included	***Yes***	***No***

Storm Water Overflow – means a structure or device on a sewerage system designed and constructed for the purpose of relieving the system of excess flows that arise as a result of rainwater or melting snow in the sewered catchment, the excess flows being discharged to receiving waters.

All wastewater treatment works discharges in South Dublin County Council comply with the definition of "storm water overflow" except those discharges caused as a result of pump station failures(emergency overflows). As stated in B.5 above, a number of storm water overflows are being examined with a view to decommissioning a number of them. Since the application process commenced one overflow has been decommissioned (SDCCSWO04). Another few may potentially be decommissioned, however, they must be monitored prior to a final decision. These overflows are in place to prevent flooding of dwellings and subsequent claims / public health issues, therefore care must be exercised in allowing for any decommissions. The potential to remove some of these overflows presents itself due to various upgrades to the system that have occurred in recent years. The design of all storm water overflow will be examined with a view to improving them where necessary. A programme is not available for this yet, however with less than 20 such overflows it is envisaged this could be done in late 2008 / early 2009.

SECTION A: NON-TECHNICAL SUMMARY

Advice on completing this section is provided in the accompanying Guidance Note.

A non-technical summary of the application is to be included here. The summary should identify all environmental impacts of significance associated with the discharge of waste water associated with the waste water works. This description should also indicate the hours during which the waste water works is supervised or manned and days per week of this supervision.

The following information must be included in the non-technical summary:

A description of:

- the waste water works and the activities carried out therein,
- the sources of emissions from the waste water works,
- the nature and quantities of foreseeable emissions from the waste water works into the receiving aqueous environment as well as identification of significant effects of the emissions on the environment,
- the proposed technology and other techniques for preventing or, where this is not possible, reducing emissions from the waste water works,
- further measures planned to comply with the general principle of the basic obligations of the operator, i.e., that no significant pollution is caused;
- measures planned to monitor emissions into the environment.

Supporting information should form **Attachment Nº A.1**

Non Technical Summary of South Dublin County Council Drainage Department Infrastructure

Drainage Departments

(a) Drainage Maintenance and Operations

The Drainage Maintenance and Operations Section is based at Deansrath Depot, Clondalkin. This Section is responsible for the South Dublin County Council Drainage System which comprises approximately 1,400 km of foul and surface water public sewers.

The drainage system in modern housing estates, comprise two separate systems - a foul drainage system and a surface water system. The foul drainage system is designed to collect wastewater from toilets and also from wash-hand basins, sinks, washing machines and dishwashers. All this effluent is transported via piped systems to the wastewater treatment plant at Ringsend.

The surface water system is designed to channel stormwater (rainwater) to the nearest suitable river. Rivers and streams are natural surface water channels.

The drainage system in some older estates have a single system, 'combined sewerage system', where foul drainage and surface water enter the same pipes and everything is transported through the trunk piped system to the wastewater treatment plant at Ringsend.

South Dublin County Council is also an active participant in the Greater Dublin Strategic Drainage Study (GDSDS). The GDSDS was set up in 2001 to analyse the existing drainage system in the Greater Dublin Area and to make recommendations on future drainage practices. Dublin City Council (DCC) is the Contracting Authority acting on behalf of Fingal, South Dublin, Dun Laoghaire Rathdown, Meath, Kildare and Wicklow County Councils. The GDSDS recommendations (Insert link) were presented in 2005 and have been adopted by South Dublin County Council.

- **Services:**

Drainage Maintenance Section provides the following services:

- Non-emergency drain clearing service, this service is operable during normal working hours. The Council provides clearances of blocked drains at a charge
- Septic Tank cleaning
- Provision of connections to public sewers

- Removal of failed intercepting traps

South Dublin County Council Drainage Maintenance Section carries out cleaning of Rivers/Streams as part of the annual river/stream cleaning programme. This involves removing obstructions, vegetation from the channel of the watercourse to provide for free flow, most particularly in times of heavy rainfall.

(b) Drainage Design and Planning

The Drainage Design Section is responsible for the design of major drainage schemes to facilitate the development of land for housing, industrial and commercial uses in the County area.

The section liaises with the Department of the Environment, Heritage and Local Government (DoEHLG) and the adjoining Local Authorities in the delivery of the new drainage infrastructure.

The major drainage schemes are part funded by the DoELG either by way of capital grants or through Serviced Land Initiative. The balance of funding is collected by the Council through Development Levies on planning permissions.

The section advises the Council on Planning Matters including:

- The drawing up the Development Plan.
- Identification of Future Infrastructural Capital Requirements- as in the Draft Assessment of Needs 2007-2012.
- The preparation of the Drainage Reports for Planning Applications and reports for Compliance and Appeals.
- Preplanning discussions on Major developments in conjunction with other departments.
- The preparation of the Development Contribution Scheme.
- The section also provides a counter service for investigation of the available infrastructure for individual developments.
- The section represents the Council on the Regional Strategy Studies for the development of Water and Drainage infrastructure.
- The section is responsible for record keeping for Surface Water and Drainage infrastructure.

(c) The Mechanical Section

Drainage Pumping Stations.

The Mechanical Section is responsible for the mechanical / electrical maintenance of all Drainage Pumping Stations within the county. Such maintenance may include the repair

of Pumps, Penstocks, Shut-Off Valves, Gas Detection and Reflux valves. The Mechanical Section also has in input into the design of new pumping stations, specifying requirements on health & safety grounds, plus new CIRA and SDCC Mechanical Section Pumping Station standards, e.g. EX rated lighting, Control Rooms, Lift Gantry's, Valve Actuators, Motor Inverters, Technocover style access covers.

Stations/Siphon Chambers.

Types: Drywell, Submersible (with Control Room), Submersible (with Kiosk).

There are presently 21 Drainage Pumping Stations within the county;

Existing Drainage Pumping Stations	Type
Ard Mor	Submersible-Control Room
Ballmanagin Pumping Station	Submersible-Control Room
Belgard Fire Station Pumping Station	Submersible-Control Room
Dangan Park Pumping Station	Submersible-Kiosk
Esker Pumping Station	Drywell
Grangecastle Pumping Station	Drywell
Johnstown (Palmerstown) Pumping Station	Drywell
Kings Hospital Pumping Station	Submersible-Control Room
Kishogue Pumping Station	Submersible-Control Room
Lucan Low Level Pumping Station	Drywell
Lucan Spa Pumping Station	Submersible-Control Room
Lynch's Lane Pumping Station	Submersible-Control Room
Newcastle Ejector Pumping Station	Submersible-Control Room
Newcastle Pumping Station	Drywell
Perrystown/Kimmage Storm Tank	Submersible-Kiosk
Quarryvale Pumping Station	Drywell
Rathcoole (Tay Lane) Pumping Station	Submersible-Control Room
Spawell Pumping Station	Submersible-Kiosk
St. Brigid's Cottages Pumping Station	Submersible-Control Room
Whitehall Pumping Station	Submersible-Control Room
College Green	Submersible-Control Room

With a further 3 proposed at

Future Drainage Pumping Stations	Type
Garter Lane (Saggart) Pumping Station	Submersible-Kiosk
Peamount Pumping Station	Drywell
Tobermaclugg	Drywell

There are also 5No. siphon chambers (4No. are on the Dodder Valley Sewer Line – 2No. of which are in the Dun Laoighaire Rathdown County Council jurisdiction - Belfield and Milltown. These are owned by SDCC but maintained by agreement by DLRDCC).

The siphon chamber at the Liffey in Lucan has a muncher unit which "chops up" all rags, cloths etc before entering the siphon.

The Saggart flowmeter is located on the site of the old Saggart Sewerage Treatment Works, and is merely flow monitoring purposes on that sewer main.

Other:	
Belfield (UCD) Siphon Chamber	*Dodder Valley Line (DLR)*
Kilvere (Tempelogue) Siphon Chamber	Dodder Valley Line
Milltown Siphon Chamber	*Dodder Valley Line (DLR)*
Owendoher Siphon Chamber	Dodder Valley Line
St. Ed's (Lucan)	Muncher Unit at Liffey Siphon
Saggart Flowmeter Chamber	Flowmeter Chamber

Standards.

- *PLC (Programmable Logical Controller) control in conjunction with SCADA (System Control and Data Acquisition) HMI (Human Machine Interface).*
- Control Room (Not applicable to Submersible Kiosk Type Stations)
- Ex-Rated Lighting.
- *Actuators on all valves (above Ø100mm) and penstocks.*
- *Flap Type Reflux Valves.*
- *Fixed Wall Gas Detection (Drywell stations only).*
- Air Extraction (Drywell stations only).
- *Magmaster Type Flowmeters.*
- *Pressure Transducers.*
- *Lift Gantry.*
- *Technocover Type Access Covers.*
- *Motor Inverters.*
- *Odour Control Unit.*
- *Standby Generator.*

Problems.

- *Pump Clogging.*
- *Reflux Valve jamming.*
- *Gasket Leaks.*
- *Gas Sensors.*
- *Pump Electrics – Inverters, Soft Starters, Power Factor Correction, Motor Diagnostics Unit, Relays, Timers, Buss Bars, Contactors, etc.*

"Storm Water Overflow" means a structure or device on a sewerage system designed and constructed for the purpose of relieving the system of excess flows that arise as a result of

rain water or melting snow in the sewered catchment, the excess flow being discharged to receiving waters.

South Dublin County Council sewerage network has a total of 28 Overflows. 13 of these are associated with Pumping Stations and other infrastructure and strictly speaking are not for the purposes of relieving the system of excess stormwater flows, but rather are emergency overflows that would become active only in the event of a catastrophic failure of the pumping station.

Pumping stations are inspected on a daily basis by Drainage Inspectors. In addition, each pumping station has been set up with sump level alarms, linked by telemetry to both head office and to Deansrath / Ballymount Depots. The telemetry system can be viewed via web-based link and controlled likewise. Pump trends can show if a pump is likely to choke / fail and measures can be put in place with immediate effect. In the event a failure does occur, both Drainage Crews and Mechanical Crews are on 24 hour emergency call-out.

As a result of daily inspections and telemetry, overflows from Pumping Stations rare. In most cases, overflows would occur less than once per year.

The other 15 overflows are generally for relieving the system of excess flows where surcharging due to a lack of capacity in the main causes a risk of flooding to properties and thus create public health issues. Where an overflow is not in place for reasons of excess stormwater flows, it is in place where a foul main chronically blocks due to deficiencies in the infrastructure.

Pumping Stations, Siphons and Overflow Points

Monitoring:

(a) River Monitoring

Dangerous Substances Monitoring

- 17 Monitoring Locations

  Liffey(3), Griffeen(3), Camac(3), Brittas(2), Dodder(3), Owendoher(2) & Poddle(1)

- 100% Compliance (2007)
- DCC laboratory
- Next Report to EPA due in June 2008

Phosphorous Monitoring

- 17 Monitoring Locations:

  Liffey(1), Griffeen(3), Camac(3), Brittas(2), Dodder(5), Owendoher(3)

- 100% Compliance (2007)
- DCC laboratory
- Next Report to EPA due in June 2008

Water Framework Directive Monitoring

- The WFD river monitoring programme is continuing with:
  - Quarterly monitoring of:
    - 1No. Surveillance Site (EPA)
    - 18No. Operational Sites
      - Brittas(1), Camac(3), Dodder(4), Liffey(4), Owendoher(3) & Poddle(1)
      - Glenasmole(2)
      - Consultation with DCC / Fingal and KCC

(b) Transboundary Monitoring

SDCC Main Trunk Sewerage Systems

Flow Monitor Catchment Areas (relevant to SDCC)
(refer to map in file "PermanentFlowMonitorCatchmentsforBilling_075412001MI.pdf")

NAME	Area(hectares)		Location	Sewer	Pipe
FM03	95		Chapelizod	SDCC	375
FM04	22	Straw'beds	Chapelizod	SDCC & FCC	450
FM06	118		Irishtown	City centre sewer	2500
FM08	2775		Ringsend	Grand Canal Tunnel	2600
FM09	5080		Ringsend	Flows 6 pumps MLPS	N/A
FM10	2101	DVS	Clonskeagh	SDCC and DLRDCC	1500
FM11	2435	9B	Naas Rd	9B Sewer	1350
FM12	49		Kimmage	SDCC	300
FM13	2032	DVS	Rathfarnham	SDCC	1500

(a) The 9B Trunk Sewer Catchment - FM11

The 9B truck sewer serves the towns of:

- Lucan, Ronanstown, Cherry orchard and Clondalkin
- Fox and Geese, Bluebell and Walkinstown
- Newcastle, Rathcoole and Saggart

The area in the Liffey Valley catchment is served by five significant pumping stations. All flows are delivered to the 9B Truck sewer. The exceptions are the combined flows from Lucan old village plus any spill flows from the overflow at Lucan low level pumping station which are passed through a siphon under the River Liffey to the Strawberry Beds Sewer which drains to the City Centre catchment.. Flows from Lucan, Quarryvale and Cherry Orchard in the Liffey Catchment are pumped to a high level sewer serving Clondalkin and the remainder of the area, which lies in the Camac Catchment.

The West of Clondalkin gravitates to the 9B Trunk Sewer. Ballymount Ind Est and Kingswood connect to into the truck main at Naas Rd. Cherry Orchard and Park West discharge into the 9B Truck sewer network. Camac Valley Truck Sewer has its head at the Old Saggart WwTW (serving Rathcoole, Newcastle and Saggart) and this discharges to the 9B. Citywest discharges to the 9B trunk sewer at Clondalkin via its own truck sewer. The 9B truck sewer from Clondalkin follows the valley of the River Camac as far as Blackhorse Bridge and then along Davitt Road and Dolphin Road to the Head of the Grand Canal Truck Sewer at Herberton Bridge.

Flow Measurement
DCC Flowmeter (FM11) at Naas Road.

SDCC Input

Flow Monitor Catchment FM11 - 2435 hectares of development lands.

(b) Main Lift Pumping Station FM09

There are three major trunk sewer which connect to the MLPS. The Rathmines and Pembroke (R&P) High Level, City Centre, Grand Canal Trunk Sewer. Also East Road Pump Station.

SDCC Input

- The 9B flows into the head of the Grand Canal Truck Sewer – FM11 - 2345 hectares (Flowmeter FM11 at Bluebell)
- SDCC flows into the High Level Rathmines and Pembroke occur during storm events. Kimmage Catchment (FM12 - 49 hectares) drains to Grand Canal Trunk Sewer. (Flowmeter FM12 at Kimmage KCR)
- Strawberry Beds Sewer flows into the City Centre FM04 - 22 hectares (Flowmeter FM04 at Chapelizod)
- Palmerstown Catchment flows into City Centre FM03 – 95 hectares. (Flowmeter FM03 at Palmerstown) (300mm foul sewer)
- FM08 – 340 Hectares

(c) Dodder Valley Sewer (FM13)

The Dodder Valley Sewer SDCC Catchment drains the suburbs of Jobstown, Tallaght, Oldbawn, Firhouse, Greenhils, Kilnamanagh, Ballyboden and Rathfarnham.. The sewer has a diameter of 825mm in the upper reaches and a downstream diameter of 1500mm

SDCC input

Flow Monitor Catchment FM13 – 2032 hectares of development lands.
Small proportion of FM10 may also be SDCC – (FM10 - 2101 hectares less FM13 – 2032 hectares = 69 hectares)

Flow Measurement

Flowmeter FM13 at Rathfarnham (SDCC boundary) and further downstream FM10 at DLRDCC / DCC boundary.

(d) Transboundary Flows

South Dublin County Council is charged by Dublin City Council for conveyance, reception and treatment of all effluent from the county. The charge is based on quantity and quality of effluent (i.e. volume and BOD). Currently there are 12 transboundary points being sampled for BOD content (SD01 to SD12).

Dublin City Council has flowmeters installed at:

- **FM03 – Lucan Rd**
- **FM04 – Belgrove lawn**
- **FM08 – Walkinstown/Templeogue (This meter is at Irishtown)**

- **FM11 – Naas Rd**
- **FM12 - Kimmage Road/Ravensdale Park**
- **FM13 – Dodder Valley**

Measures Ongoing & Planned

- The pumping stations are inspected on a daily basis by Drainage Inspectors however the individual storm water overflows are checked less often. It is intended to include for all Overflows (Emergency / Stormwater) in the 2008 Inspection plan under RMCEI.
- It may be possible to decommission some of the overflows as foul sewer duplications have since been carried out. A review will be completed in 2008 to identify Stormwater overflows for decommissioning.
- It is intended to install flowmeters at strategic points of the system to investigate infiltration of surfacewater / groundwater into the system which impacts significantly on capacity
- It is intended to commence a Fats,Oils and Grease (FOG) programme of licensing food service establishments. FOG is one of the main reasons for sewer blockages.
- It is intended to carry out an awareness campaign regarding proper use of the drainage system.
- A program of significant works has been included in Section G. In addition to this, South Dublin employs a Direct Labour crew who carry out works across the county such as fouls sewer duplications, new works, improvement works etc. Their program of works has also been included in Section G.
- The telemetry and scada monitoring and alarm systems and constantly being improved and upgraded.

Section B - South Dublin County Council

(1) Section B.5

(i) For SDCCPS07b, the application states that this discharge is to cease in 2008, clarify whether the pumping station is to close or alternative measures proposed and clarify the date of cessation/decommissioning of the discharge.

Response

This overflow relates to the Ballymanagin Pumping Station. It is not intended to close or decommission this pumping station. From Drawing number SDCC PS 07 of the Article 16 Response it can be seen that there are two overflows on the inlet to the Pumping Station. It is intended to decommission one of these (SW22aSouthDublin).

(ii) For SDCCPS10a, clarify the type of discharge (e.g. an emergency discharge from the pump station, a discharge direct from a foul sewer caused by insufficient capacity, a storm water overflow etc.

Response

SDCCPS10a relates to an emergency discharge from the Tay Lane Pumping Station.

(iii) For SDCCSWO03, provide confirmation that this overflow has been decommissioned

Response

Airton Road

The FS that Bimeda discharges to has an overflow to the FS on the opposite side of the road (overflow from FS to FS). This overflow did not prevent sewer overflow at Bimeda. It is believed that this overflow failed to function when the FS to which it was connected surcharged (both FS in surcharge). Drainage Maintenance Division constructed an overflow from Bimeda`s connection to an adjacent stream (Priory Stream). The new Airton Road FS disconnected the original FS to FS overflow and directed it into the new pipeline. **This new scenario needs to be monitored to see if the overflow to stream can be dispensed with**. The reason for the overflow is to prevent wastewater flooding of Bimeda, an industrial premises on Airton Road.

(iv) For SDCCSWO04, 05a, 05b, 08, 11, and 12 provide dates for decommissioning of these overflows/cessation of discharges

Response

SDCCSWO04 – Avonmore Road

Avonmore Est.

The new Avonmore Foul Sewer fully removed the need for this overflow. The decommissioning was undertaken during April 2008 and is complete

SDCCSWO05a & b – Brookfield Cottage

The overflows at Brookfield Cottage are required until such time as the FS on Orchard Lane can be directed into the head of the new Watery Lane FS. This is being investigated in relation to the works programme.

SDCCSWO08 – Castleview Road / Watery Lane

The old main to which this overflow is attached now has a new storm overflow connected to the latest FS which was constructed by Direct Labour Division. Full decommissioning of the overflow should now be feasible however it will be necessary for the Area Drainage Inspector to monitor this during heavy weather to verify for certain that the new situation offers full relief before going ahead with decommissioning.

SDCCSWO11 – Springfield Avenue
The overflow at Springfield Avenue was temporarily sealed in December 2007, however in May 2008, a blockage occurred on the Foul Sewer resulting in an adjacent manhole surcharging. South Dublin County Council is currently looking a retaining this overflow, however, routine flushing of this main together with an improvement in the design of the overflow are being addressed.

SDCCSWO12 – Loretto Terrace
This overflow is currently temporarily sealed with a view to assessing the possibility of decommissioning.

(2) Attachment B.5
Hardcopy drawings / maps have been attached of the stormwater / emergency overflow points associated with the wastewater works.

(3) Section B.10

"B.10 Capital Investment Programme
State whether a programme of works has been prioritised for the development of infrastructure to appropriately collect, convey, treat and discharge waste water from the relevant agglomeration. If a programme of works has been prioritised provide details on funding, (local or national), allocated to the capital project. Provide details on the extent and type of work to be undertaken and the likely timeframes for this work to be completed.

Attachment B.10 *should contain the most recent development programme, including a copy of any approved funding for the project and a timeframe for the completion of the necessary works to take place."*

Attachment included	***Yes***	***No***
Documents from SDCC Infrastructural Project Tracking System. Also refer to GDSDS ***Preamble to Capital Works Programme 2008-2010*** ***Capital Works Programme 2008-2010***	***YES***	

Response
Attachments were included in the previous documentation, however these were submitted under Section G of the Application Form. The South Dublin County Council "3 Year Capital Investment Programme 2007 -2009" and the "SDCC Capital Infrastructural Projects 30/11/07" update have now been included in Section B.10.

The Preamble to Capital Works Programme 2008-2010 and the Capital Works Programme 2008-2010 has now been attached.

The Greater Dublin Strategic Drainage Study has been attached to the overall application by Dublin City Council and is available on the Dublin City Council's website.

SECTION B: GENERAL

Advice on completing this section is provided in the accompanying Guidance Note.

B.1 Applicant's Details*

Name and Address for Correspondence

Only application documentation submitted by the applicant and by the nominated person will be deemed to have come from the applicant.

Provide a drawing detailing the agglomeration to which the licence application relates. It should have the boundary of the agglomeration to which the licence application relates clearly marked in red ink.

Name:**	N/A – Dublin City Council to complete
Address:	
Tel:	
Fax:	
e-mail:	

*This should be the name of the water services authority in whose ownership or control the waste water works is vested.

**Where an application is being submitted on behalf of more than one water services authority the details provided in Section B.1 shall be that of the lead water services authority.

Name*:	N/A – Dublin City Council to complete
Address:	
Tel:	
Fax:	
e-mail:	

*This should be the name of person nominated by the water services authority for the purposes of the application.

Co-Applicant's Details

Name*:	South Dublin County Council
Address:	County Hall, The Square, Tallaght, Dublin 24
Tel:	(01) 414 9000
Fax:	(01) 414 9101
e-mail:	cccounter@sdublincoco.ie

*This should be the name of a water services authority, other than the lead authority, where multiple authorities are the subject of a waste water discharge (authorisation) licence application.

Design, Build & Operate Contractor Details

Name*:	N/A – Dublin City Council to complete
Address:	
Tel:	
Fax:	
e-mail:	

*Where a design, build & operate contract is in place for the waste water works, or any part thereof, the details of the contractor should be provided.

Attachment B.1 should contain appropriately scaled drawings / maps (≤A3) of the agglomeration served by the waste water works showing the boundary clearly marked in red ink. These drawings / maps should also be provided as geo-referenced digital drawing files (e.g., ESRI Shapefile, MapInfo Tab, AutoCAD or other upon agreement) in Irish National Grid Projection. These drawings should be provided to the Agency on a separate CD-Rom containing sections B.2, B.3, B.4, B.5, C.1, D.2, E.3 and F.2.

Attachment included	**Yes**	**No**

B.2 Location of Associated Waste Water Treatment Plant(s)

Give the location of the waste water treatment plant associated with the waste water works, if such a plant or plants exists.

Name*:	N/A – Dublin City Council to complete
Address:	
Grid ref (6E, 6N)	
Level of Treatment	
Primary Telephone:	
Fax:	
e-mail:	

***This should be the name of the person responsible for the supervision of the waste water treatment plant.

Attachment B.2 should contain appropriately scaled drawings / maps (≤A3) of the site boundary and overall site plan, including labelled discharge, monitoring and sampling points. These drawings / maps should also be provided as geo-referenced digital drawing files (e.g., ESRI Shapefile, MapInfo Tab, AutoCAD or other upon agreement) in Irish National Grid Projection. These drawings should be provided to the Agency on a separate CD-Rom containing sections B.1, B.3, B.4, B.5, C.1, D.2, E.3 and F.2.

Attachment included	**Yes**	**No**

B.3 Location of Primary Discharge Point

Give the location of the primary discharge point, as defined in the Waste Water Discharge (Authorisation) Regulation, associated with the waste water works.

Type of Discharge	E.g. Diffuser, Lunar Valve, Non-return flap valve etc.
Unique Point Code	N/A – Dublin City Council to complete
Location	
Grid ref (6E, 6N)	

Attachment B.3 should contain appropriately scaled drawings / maps (≤A3) of the discharge point, including labelled monitoring and sampling points associated with the discharge point. These drawings / maps should also be provided as geo-referenced digital drawing files (e.g. ESRI Shapefile, MapInfo Tab, AutoCAD or other upon agreement) in Irish National Grid Projection. This data should be provided to the Agency on a separate CD-Rom containing the drawings and tabular data requested in sections B.1, B.2, B.4, B.5, C.1, D.2, E.3 and F.2.

Attachment included	Yes	No

B.4 Location of Secondary Discharge Point(s)

Give the location of **all** secondary discharge point(s) associated with the waste water works. Please refer to Guidance Note for information on Secondary discharge points.

Type of Discharge	E.g. Diffuser, Lunar Valve, Non-return flap valve etc.
Unique Point Code	N/A – Dublin City Council to complete
Location	
Grid ref (6E, 6N)	

Attachment B.4 should contain appropriately scaled drawings / maps (≤A3) of the discharge point(s), including labelled monitoring and sampling points associated with the discharge point(s). These drawings / maps should also be provided as geo-referenced digital drawing files (e.g. ESRI Shapefile, MapInfo Tab, AutoCAD or other upon agreement) in Irish National Grid Projection. This data should be provided to the Agency on a separate CD-Rom containing sections B.1, B.2, B.3, B.5, C.1, D.2, E.3 and F.2.

Attachment included	Yes	No

B.5 Location of Storm Water Overflow Point(s)

Give the location of **all** storm water overflow point(s) associated with the waste water works.

Type of Discharge	Lucan Spa Pumping Station overflow
Unique Point Code	SDCCPS01a
Location	Lucan
Grid ref (6E, 6N)	302512E 235037N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	Lucan Low Level, Pumping station overflow
Unique Point Code	SDCCPS02a
Location	Lucan Village
Grid ref (6E, 6N)	303292E 235043N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	Esker Pumping station overflow
Unique Point Code	SDCCPS03a
Location	Esker, Lucan
Grid ref (6E, 6N)	304039E 234487N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	Quarryvale Pumping Station overflow
Unique Point Code	SDCCPS04a
Location	Quarryvale
Grid ref (6E, 6N)	311558E 228031N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	Johnstown Pumping Station overflow

Unique Point Code	SDCCPS05a
Location	Johnstown, Palmerstown
Grid ref (6E, 6N)	308661E 234297N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	Grangecastle Pumping station overflow
Unique Point Code	SDCCPS06a
Location	Grangecastle Business Park
Grid ref (6E, 6N)	303147E 232089N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	Overflow from Ballymanagan Pumping Station. 9” overflow from MH at side of 70 James Connolly Park.
Unique Point Code	SDCCPS07a
Location	Station Road, Clondalkin
Grid ref (6E, 6N)	306989E 232309N
Monitoring / Sample Points associated with discharge point	N/A – There are no monitoring points associated with the discharge point. The Camac River is sampled in accordance with the Phosphorous and DS regs and WFD downstream of location. Area Inspector periodically check overflow.

Type of Discharge	Ballymanagan Pumping Station overflow
Unique Point Code	SDCCPS07b

Location	8 Ballymanagan, Clondalkin
Grid ref (6E, 6N)	306930E 232203N
Monitoring / Sample Points associated with discharge point	N/A – 2nd overflow from Ballymanagan Pumping Station. There are no monitoring points associated with the discharge point. The Camac River is sampled in accordance with the Phosphorous and DS regs and WFD downstream of location. Area Inspector periodically check overflow. **To be closed in 2008**

Type of Discharge	Peamount / Newcastle Ejector. Emergency overflow for Ejector Station
Unique Point Code	SDCCPS08a
Location	Newcastle
Grid ref (6E, 6N)	
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	Newcastle Pumping Station.
Unique Point Code	SDCCPS09a
Location	Newcastle
Grid ref (6E, 6N)	
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	F/S overflow to surface water stream from Tay Lane, Rathcoole, Pumping Station. Emergency overflow for pumping station.
Unique Point Code	SDCCPS10a
Location	Tay lane Rathcoole
Grid ref (6E, 6N)	301903E 226888N

Monitoring / Sample Points associated with discharge point	N/A -

Type of Discharge	Overflow from Whitehall Pumping Station
Unique Point Code	SDCCPS11a
Location	Grosnover Court
Grid ref (6E, 6N)	312356E 229592N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	Siphon overflow
Unique Point Code	SDCCSN01
Location	Liffey @ St Edmondbury, Lucan
Grid ref (6E, 6N)	303827E 235698N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	F/S overflow to attenuation tank. If attenuation tank fills there is an overflow to Poddle
Unique Point Code	SDCCSWO01
Location	Whitehall Road (Perrystown Overflow)
Grid ref (6E, 6N)	312769E 230249N
Monitoring / Sample Points associated	N/A

with discharge point	

Type of Discharge	F/S to S/W overflow to prevent flooding of a dwelling as a result of main blockages and / or surcharging heavy rain events. Occassional overflow.
Unique Point Code	SDCCSWO02
Location	TreePark Road, Tamarisk, Kilnamanagh
Grid ref (6E, 6N)	309736E 229573N
Monitoring / Sample Points associated with discharge point	N/A – The overflow is checked periodically by the Area Drainage Inspector. In addition residents will report any overflow occurances.

Type of Discharge	F/S to S/W overflow to prevent flooding of commercial premises as a result of main blockages and / or surcharging heavy rain events. Occasional overflow. 6" Overflow to Tymon Stream tributary
Unique Point Code	SDCCSWO03
Location	Bimeda, Airton Road
Grid ref (6E, 6N)	309247E 228263N
Monitoring / Sample Points associated with discharge point	N/A – The Commissioning of the new 600mm Foul Sewer Duplication along Airton Road will allow for the decommissioning of this overflow – Jan 2008

Type of Discharge	F/S to S/W overflow to Dodder to prevent flooding as a result of main blockages and / or surcharging from heavy rain events.
Unique Point Code	SDCCSWO04
Location	Avonmore Rd / Avonmore Park
Grid ref	

(6E, 6N)	310482E 227249N
Monitoring / Sample Points associated with discharge point	N/A – With the construction of the Avonmore Road Foul Sewer Duplication in 2006 this overflow will be decommissioned in 2008.

Type of Discharge	F/S to S/W overflow to Camac to prevent flooding as a result of main blockages and / or surcharging during heavy rain events. Occassional overflow
Unique Point Code	SDCCSWO05 a & b
Location	Brookfield Cottage, Orchard Lane
Grid ref (6E, 6N)	307101E 231587N
Monitoring / Sample Points associated with discharge point	N/A – This overflow could be closed pending works being carried out re Watery Lane Foul Sewer and Park Developments.

Type of Discharge	F/S overflow to Camac from MH in commercial property. Emergency overflow activites only if main sewer chokes. Rarely activates.
Unique Point Code	SDCCSWO06
Location	Harris Trucks, Naas Rd
Grid ref (6E, 6N)	310016E 231782N
Monitoring / Sample Points associated with discharge point	N/A - The overflow is checked periodically by the Area Drainage Inspector.

Type of Discharge	F/S overflow to surface water system to prevent flooding of house. Capacity restrictions in main sewer due to possible infiltration. 225mm overflow.
Unique Point Code	SDCCSWO07
Location	107 St Peters Road, Walkinstown

Grid ref (6E, 6N)	311402E 230544N
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	F/S overflow to Camac. (Decommissioned?)
Unique Point Code	SDCCSWO08
Location	2 Castle View Rd, Clondalkin / Watery Lane
Grid ref (6E, 6N)	307320E 231706N
Monitoring / Sample Points associated with discharge point	N/A – Inspector to confirm that this overflow has been decommissioned

Type of Discharge	F/S overflow to surface water system to prevent flooding of house. Capacity restrictions in main sewer due to possible infiltration.
Unique Point Code	SDCCSWO09
Location	Aylmer Road
Grid ref (6E, 6N)	
Monitoring / Sample Points associated with discharge point	N/A

Type of Discharge	F/S overflow into Poddle
Unique Point Code	SDCCSWO10
Location	Kimmage Road West
Grid ref (6E, 6N)	313333E 230418N
Monitoring / Sample	N/A

Points associated with discharge point	

Type of Discharge	F/S overflow to Dodder.
Unique Point Code	SDCCSWO11
Location	Springfield Avenue
Grid ref (6E, 6N)	313724E 228908N
Monitoring / Sample Points associated with discharge point	N/A – This overflow could be decommissioned pending monitoring

Type of Discharge	Overflow from F/S into S/W system. Baffle wall in F/S - MH with overflow into surface water.
Unique Point Code	SDCCSWO12
Location	Loreto Terrace / Grange Road
Grid ref (6E, 6N)	314672E 228460N
Monitoring / Sample Points associated with discharge point	N/A – Rarely activated and could be decommissioned pending monitoring

Type of Discharge	F/S overflow to S/W to prevent flooding of a house. 150mm overflow
Unique Point Code	SDCCSWO13
Location	Oldcourt Manor
Grid ref (6E, 6N)	310134E 226024N
Monitoring / Sample Points associated	N/A

with discharge point	

Type of Discharge	Storm Overflow chamber on the 375mm foul sewer main at the Shell Filling Stations on the N4 beside Stewards Hospital, Palmerstown. The storm drain flows through Stewards Hospital to the River Liffey
Unique Point Code	SDCCSWO14
Location	Adj Shell, Palmerstown, N4
Grid ref (6E, 6N)	308818E 234951N
Monitoring / Sample Points associated with discharge point	N/A

Attachment B.5 should contain appropriately scaled drawings / maps (≤A3) of storm water overflow point(s) associated with the waste water works, including labelled monitoring and sampling points associated with the discharge point(s). These drawings / maps should also be provided as geo-referenced digital drawing files (e.g. ESRI Shapefile, MapInfo Tab, AutoCAD or other upon agreement) in Irish National Grid Projection. This data should be provided to the Agency on a separate CD-Rom containing sections B.1, B.2, B.3, B.4, C.1, D.2, E.3 and F.2.

Attachment included	**Yes**	**No**

B.6 Planning Authority

Give the name of the planning authority, or authorities, in whose functional area the discharge or discharges take place or are proposed to take place.

Name:	N/A – Dublin City Council to complete
Address:	
Tel:	
Fax:	

e-mail:

Planning Permission relating to the waste water works which is the subject of this application:- (tick as appropriate)

has been obtained		***is being processed***	
is not yet applied for		***is not required***	

Local Authority Planning File Reference Nº:	

Attachment B.6 should contain ***the most recent*** planning permission, including a copy of ***all*** conditions, and where an EIS was required, copies of any such EIS and any certification associated with the EIS, should also be enclosed. Where planning permission is not required for the development, provide reasons, relevant correspondence, *etc.*

Attachment included	**Yes**	**No**

B.7 Other Authorities

B.7 (i) Shannon Free Airport Development Company (SFADCo.) area

The applicant should tick the appropriate box below to identify whether the discharge or discharges are located within the Shannon Free Airport Development Company (SFADCo.) area.

Attachment B.7(i) should contain details of any or all discharges located within the SFADCo. area.

Within the SFADCo Area N/A	**Yes**	**No**

B.7 (ii) Health Services Executive Region

The applicant should indicate the **Health Services Executive Region** where the discharge or discharges are or will be located.

Name:	N/A – Dublin City Council to complete
Address:	
Tel:	
Fax:	

e-mail:	

B.7 (iii) Other Relevant Local Authorities

Regulation 13 of the Waste Water Discharge (Authorisation) Regulations, 2007 requires all applicants, not being the local authority in whose functional area the relevant waste water discharge or discharges, to which the relevant application relates, takes place or is to take place, to notify the relevant local authority of the said application.

Name:	N/A – Dublin City Council to complete
Address:	
Tel:	
Fax:	
e-mail:	

Relevant Authority Notified	**Yes**	**No**

Attachment B.7(iii) should contain a copy of the notice issued to the relevant local authority.

Attachment included	**Yes**	**No**

B.8 Notices and Advertisements

Regulations 10 and 11 of the Waste Water Discharge (Authorisation) Regulations, 2007 require all applicants to advertise the application in a newspaper and by way of a site notice. See *Guidance Note.*

Attachment B.8 should contain a copy of the site notice and an appropriately scaled drawing (≤A3) showing its location. **The original application must include the original page of the newspaper in which the advertisement was placed**. The relevant page of the newspaper containing the advertisement should be included with the original and two copies of the application.

Attachment included N/A – Dublin City Council to complete	**Yes**	**No**

B.9 (i) Population Equivalent of Agglomeration

TABLE B.9.1 POPULATION EQUIVALENT OF AGGLOMERATION

The population equivalent (p.e.) of the agglomeration to be, or being, served by the waste water works should be provided and the period in which the population equivalent data was compiled should be indicated.

Population Equivalent	
Data Compiled (Year)	
Method	

B.9 (ii) FEES

State the relevant Class of waste water discharge as per Column 1 of the Second Schedule, and the appropriate fee as per Columns 2 or 3 of the Third Schedule of the Waste Water Discharges (Authorisation) Regulations 2007, S.I. No. 684 of 2007.

Class of waste water discharge	Fee (in €)

Appropriate Fee Included N/A – Dublin City Council to complete	Yes	No

B.10 Capital Investment Programme

State whether a programme of works has been prioritised for the development of infrastructure to appropriately collect, convey, treat and discharge waste water from the relevant agglomeration. If a programme of works has been prioritised provide details on funding, (local or national), allocated to the capital project. Provide details on the extent and type of work to be undertaken and the likely timeframes for this work to be completed.

Attachment B.10 should contain the most recent development programme, including a copy of any approved funding for the project and a timeframe for the completion of the necessary works to take place.

Attachment included	Yes	No
Documents from SDCC Infrastructural Project Tracking System. Also refer to GDSDS	**YES**	

B.11 Significant Correspondence

Provide a summary of any correspondence resulting from a Section 63 notice issued by the Agency in relation to the waste water works under the Environmental Protection Agency Acts, 1992 and 2003, as amended by Section 13 of Protection of the Environment Act, 2003.

Attachment B.11 should contain a summary of any relevant correspondence issued in relation to a Section 63 notice.

Attachment included N/A – Dublin City Council to complete	**Yes**	**No**

B.12 Foreshore Act Licences.

Provide a copy of the most recent Foreshore Act licence issued in relation to discharges from the waste water works issued under the Foreshore Act 1933.

Attachment B.12 should contain the most recent licence issued under the Forsehore Act 1933, including a copy of ***all*** conditions attached to the licence and any monitoring returns for the previous 12-month period, if applicable.

Attachment included N/A – Dublin City Council to complete	**Yes**	**No**

Three Year Capital Programme 2008 – 2010

Programme Group 3 – Water Supply & Drainage

The three-year capital programme provides for an expenditure of **€113.2m** which consists of **€49.4m** for water schemes and **€63.8m** for wastewater and surface water schemes. The schemes are funded from a combination of grants from the DEHLG, development levies, water pricing and in some cases funding from other agencies. In the case of schemes which rely on funding from the DEHLG approvals are required at various stages of the projects and this may affect the programme. The schemes include the following:-

Boherboy Water Supply Scheme

This scheme involves the construction of two new reservoirs at Saggart and at Kiltalown with capacities of 24 and 17.5 megalitres respectively. A new pumping station at Saggart will pump water to a new high level reservoir at Kiltalown. The scheme will also upgrade and expand the existing pipe network in the areas of Newcastle, Rathcoole, Saggart, Brownsbarn, Citywest, the southern parts of Tallaght and areas of Ballycragh, Oldbawn, Knocklyon, Ballyboden and Ballycullen. The scheme will enhance the water supply to existing users and facilitate future development. **Timescale: 2008 – 2010. Estimated Cost for the same period - €28.0million.**

Dodder Valley Foul Sewer Improvement Scheme

This scheme involves investigation and remediation of the existing sewer network with removal of storm water infiltration. This work will free up capacity in the existing sewer network to provide for new development. The scheme also involves the provision of new branch sewers and overflow tank to relieve existing network problems. The existing and future areas connected to the scheme are as far west as Jobstown and parts of Fortunestown and stretches to Ballycullen and Rathfarnham. **Timescale: 2008 – 2010. Estimated Cost for the same period- €9 million**

Greater Dublin Drainage (Contract 9B) Improvement Scheme

This scheme involves investigation, remediation and upgrading of the existing sewer network with removal of storm water infiltration. New storm tank at Ballymount with overflow to surface water segment of Grand Canal tunnel. The existing and future areas connected to the Scheme are Lucan including Adamstown, Liffey Valley, Quarryvale, Clondalkin, Ballymount, Grange Castle, Saggart, Newcastle, Rathcoole and Greenogue. **Timescale: 2008– 2010. Estimated Cost for the same period - €16 million**

Saggart/Rathcoole & Newcastle Drainage Collection Improvement Scheme

This scheme involves the investigation remediation and upgrading of the foul and surface water infrastructure in these three towns in order to provide for existing and future development. A new gravity main will be provide at Tay Lane to

connect Rathcoole to the new trunk sewer at the decommissioned treatment works at Saggart. A new pumping station will be provided at Peamount. **Timescale: 2008 – 2010.**
Estimated Cost for the same period - €11million

Tobermaclugg Rising Mains and Foul Sewer
This scheme consists of the provision of twin rising mains and a gravity sewer to connect to the 9B foul sewer at Balgaddy. The scheme is developer led with 60% of the cost being funded by the developer. The cost below is 40% of the total cost which is being funded by the DEHLG under the SLI scheme. The scheme will convey sewage from most of the Adamstown SDZ lands. **Timescale: Work has commenced on the rising mains and gravity sewer as part of roads contracts. Estimated Cost for the period 2008-2010**
€4 million.

Tobermaclugg Wastewater Pumping Station
This scheme is developer led by Chartridge Ltd and will serve most of the Adamstown SDZ lands. The scheme is developer led with 60% of the cost being funded by the developer. The cost below is 40% of the total cost which is being funded by the DEHLG under the SLI scheme.
Timescale: 2008 – 2010 Estimated cost for the period: €6.6million

Tobbermaclugg Stream Improvement Scheme
This scheme involves upgrading the river channel from the Adamstown SDZ lands to the River Liffey to alleviate existing flooding problems and to provide an adequate outfall for surface water from the Adamstown lands. The scheme is developer led with 60% of the cost being funded by the developer. The cost below is 40% of the total cost which is being funded by the DEHLG under the SLI scheme.
Timescale: 2008 – 2010. Estimated cost for period - €3.45million

Robinhood Stream Improvement Scheme
The scheme involves improvements to the stream channel from Robinhood Industrial Estate to the Camac River. This scheme is unlikely to receive DEHLG funding and will have to be funded from other sources.
Timescale: 2008 – 2010. Estimated cost for period - €776,300

Whitehall Road Flood Alleviation Scheme
The scheme involves removing some of the surface water from the existing combined sewer and reducing flows in the Poddle River by expanding the attenuation lakes at Tymon Park. This scheme is unlikely to attract DEHLG funding and will have to be funded from other sources.
Timescale: 2008 – 2010. Estimated cost €676,300

Lucan/Palmerston Water Supply Scheme

Construction commenced in October 2002 and the scheme was substantially completed in December 2004. All outstanding works completed. The final accounts will be submitted to the DEHLG in the near future for their approval. **Projected Expenditure 2008-2010: €300,000**.

Non Domestic Metering Project

The statutory Water Pricing Policy framework requires the universal metering of non domestic customers and the full recovering of the cost of providing water and waste water services to non domestic customers. The project commenced in 2006 and expenditure for 2006 to end of 2007 was €5.1million. **Timescale: Contract in progress, completion June 2008 Estimated Cost for Project €7.1million- Expenditure in 2008 €2.83m**

Road Works Schemes

These schemes involve the construction of strategic watermains along new roadways as proposed in the Council's Roads Programme for 2008-2010. These mains will offer security of supply, create strategic linkages across the County and will improve flows within the distribution network.

Timescale 2008-2010 Estimated Cost for same period – €9.27million

Dublin Region Mains Rehabilitation Project

The Mains Rehabilitation phase of the Greater Dublin Region Strategic Water Study Report commenced early 2006. The project involves the replacement of pipes with a high burst frequency, based on an agreed assessment methodology. Under the increased funding arrangements for Water Conservation Programmes (circular L6/05), 90% funding is available for this work. The Council has received approval from the Regional Steering Group and intends to carry out rehabilitation, to a number of areas prone to general and seasonal bursts, on a phased basis over the next two years.

Timescale: 2008-2009

Estimated cost for the same period - €4.57million

Water Conservation Programme

The National Water Conservation funding programme provides 90% grants to local authorities to implement and maintain effective water conservation measures. The Council has so far carried out works on additional district metering and pressure control management amounting to €175,000 in accordance with this programme.

Timescale: End 2008

Estimated cost for same period - €0.482million

Water Maintenance

The Capital Programme includes a number of small schemes throughout the County to upgrade the Council's watermains. Works carried out to upgrade and improve the watermain network during 2007 amounted to approximately €1m.

Timescale: 2008 – 2010
Estimated cost: €3.97million

Drainage Maintenance and Mechanical Works

The Capital Programme provides for certain works to upgrade the Council's infrastructure costing approximately **€7.38million over the years 2008-2010**.
Also provided for is the refurbishment of a number of pumping stations and replacement of pumps at an estimated cost of **€4.94 million over the years 2008-2010**.

Draft Agreement expected end of November 2007.

Draft Agreement between SDCC and Chartridge being finalised by McCann Fizgerald and expected to be ready by 31/10/07

Construction commenced on-site late August 2007

Agreement between Council and Chartridge drawn up and signing expected in next three weeks.

Received qualified approval from DEHLG on 6th June 2007.

Awaiting DEHLG approval of Tender Report submitted on 27th April, 2007.

John O'Connor has accepted position of Tobermaclugg SRE

My Projects:

SECTION C: INFRASTRUCTURE & OPERATION

Advice on completing this section is provided in the accompanying Guidance Note.

C.1 Operational Information Requirements

Provide a description of the plant, process and design capacity for the areas of the waste water works where discharges occur, to include a copy of such plans, drawings or maps, (site plans and location maps, process flow diagrams), and such other particulars, reports and supporting documentation as are necessary to describe all aspects of the area of the waste water works discharging to the aquatic environment. Maps and drawings must be no larger than A3 size.

Attachment C.1 should contain supporting documentation with regard to the plant and process capacity, systems, storm water overflows, emergency overflows, etc., including flow diagrams of each with any relevant additional information. These drawings / maps should also be provided as geo-referenced digital drawing files (e.g. ESRI Shapefile, MapInfo Tab, AutoCAD or other upon agreement) in Irish National Grid Projection. This data should be provided to the Agency on a separate CD-Rom containing sections B.1, B.2, B.3, B.4, B.5, D.2, E.3 and F.2.

Attachment included MAPDRAIN SCHEMATICS	Yes	No

C.2 Outfall Design and Construction

Provide details on the primary discharge point & secondary discharge points and storm overflows to include reference, location, design criteria and construction detail.

Attachment C.2 should contain any supporting documentation on the design and construction of any and all discharge outfalls, including stormwater overflows, from the waste water works.

Attachment included	Yes	No

Section C – South Dublin County Council

Provide details of the following:

- *Number of duty and standby pumps at each pumping station*
- *The measures taken in the event of power failure*
- *Details of storage capacity at each pump station*
- *Design criteria and construction for each storm water overflow, where applicable*

Response

Table Attached – SDCC Drainage Pump Stations – Mech Details – Section C
Also See Section C file on disk

Pumping Station Details

Pump Stn No.	Code	Location	Pumps	Duty/Standby?	Type of Discharge	Discharge No.	Sump capacity	Power Failure Measures	Planned Improvements and Completion Date.	Reasons for overflow	Description
