**Annual Environmental Report
2007**

Reporting Period

This Report covers the period 1st January 2007 to 31st December 2007

Waste Activities carried out at the facility

1) Licensed waste disposal activities in accordance with the Third Schedule of the Waste Management Act 1996

Class 13: Storage prior to submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where the waste concerned is produced.

Specific wastes applicable are aqueous waste, card/ board / dry wastes

2) Licensed waste recovery activities, in accordance with the Fourth Schedule of the Waste Management Act 1996

Class 13: Storage prior to submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where such waste is produced.

Specific wastes applicable are:

- a) Kerosene
- b) Paint Related Material
- c) Xylene
- d) Oil Filters
- e) Flammable Solid material
- f) Aqueous Degreasers
- g) Misc

Quantity and Composition of waste received, disposed of and recovered

See Annex 1

Annex 1 provides a complete inventory of all waste movements into the transfer station in 2007. Table 1 below summarizes the annual waste inward to the transfer station over the last 5 years (2003-2007). The total annual waste received for 2007 was 477 tonnes. This shows just over a 10% increase compared with the previous year.

Table 1. Inward Waste Movements 2003-2007

Waste Stream	Destination (2005)	2003 (KG)	2004 (KG)	2005 (KG)	2006 (KG)	2007 (KG)
Kerosene	SK UK	270,900	301,200	215,500	170,480	197,654
Mixed Solvents	SK UK	65,679	157,790	*	3,210	*
Xylene	SITA	*	*	34,855	23,991	29,674
Paint Waste	SK UK	*	*	84,360	53,422	57,557
Petroleum Distillates	Recyfuel (Belgium)	*	*	1,910	1,045	3,587
Solid Waste (Flammable)	Recyfuel (Belgium)	*	*	6,304	13,395	20,901
Aqueous Cleaner	SITA	13,000	25,000	28,600	25,120	36,530
Oil Filters	Atlas Oils	102,400	80,250	80,280	136,620	130,900
Total		451,979	564,240	451,809	427,283	476,803

Table 2. Total amount of waste currently being held at the facility

Waste Type	Drum Numbers and Volumes	Total Volume (litres)
Kerosene	BULK	9,000
Paint Thinners	12 x 205L + 3 x 60L + 58 x 25L + 360 l (assorted)	4,470
Petroleum Distillates	2x 205l drums	410
Oil Filters	15 x 160L Bins	2,400
Aqueous Brake Cleaner	4.5 x 1000L + 16 x 25L	4,900
Flammable Solid Waste	6 x 205l + 1 x 120L + 2 x 60L + 1 x 25L	1,535
Xylene	87 x 25l	2,175
Misc		650

Summary Report on Emissions

No significant emissions were made during the reporting period. All waste storage areas are within the roofed and bunded site building and therefore storm water contamination is not likely to occur and any surface contamination through leaks or spillage's may be promptly cleaned up using absorbent materials stocked on site. Details of the most recent environmental monitoring for Air, Noise and Ground water are provided below and in Annexes 2, 3 and 4.

Annual Environmental Monitoring

Air Emission Monitoring:

The results of air monitoring carried out at the facility on the 3rd of December 2007 by TMS Environment Ltd are provided in Annex 2. The survey protocol is also provided here.

Sampling and Analysis Methods

Samples were collected using an adsorption technique. They were analysed off site using Gas Chromatograph Mass Spectroscopy.

Interpretation:

Results show the concentrations of Class A compounds, Class B compounds and Total Organics to be very comfortably within the licence levels. The highest value was 0.35 mg/m³ was well under the 20 mg/Nm³. The table below summarises the Air emission trends for the last 5 years. It shows that this years emissions are at the lower end of the range.

Trends

Parameter	Emission Limit (mg/m ³)	2003 Value (mg/Nm ³)	2004 Value (mg/Nm ³)	2005 Value (mg/Nm ³)	2006 Value (mg/Nm ³)	2007 Value (mg/Nm ³)
<i>Total Class A</i>	2	0.36	0.30	0.3	0.76	<0.35
<i>Total Class B</i>	20	0.36	0.30	0.3	0.76	<0.35
<i>Total Organics as C</i>	50	6.48	4.0	4.0	0.83	<0.32

Noise Monitoring:

Survey Implementation

TMS Environment Ltd personnel conducted the survey on 3rd December 2007. A copy of the report is included as annex 3. The measurement parameters included meteorological measurements and observations of prevailing conditions at the time of the survey. The main noise measurement parameter was the equivalent continuous A-Weighted Sound Pressure Level, Laeq,T. Noise levels at the site boundary locations were measured over 30 minute measurement intervals during the daytime period. A statistical analysis of the measure results was also completed so that the percentile levels, LAN. T, for N = 90% and 10% over the measurement intervals were also recorded. The percentile levels represent the noise level in dB (A) exceeded for N% of the measurement time.

Additionally, a 1/3-octave frequency analysis was also conducted over three minute intervals at each of the noise monitoring locations in order to assess the potential tonal components of ambient noise generated in the vicinity of the site

Conclusions

The recommended EPA level for broadband noise measurement is 55 dB (A). The site was within the limit for points N3 and N4 with levels of 55 dBA in both cases (all $L_{A90,30 \text{ min}}$). Points N1 and N2 exceeded the limit at 71 dBA and 59 dBA respectively. However, as requested by the EPA during our last audit, A noise survey was to be carried out during loading. This figure is directly attributed to this request. Loading is carried out during the morning for a maximum of 2 hours.

Trends:

The requirement to test during loading times has shown a peak in the N1 and N2 readings. Other than this, no discernable, significant changes or trends were observed since the monitoring programme was established.

Groundwater Monitoring:

TMS Environment Ltd, carried out a ground water quality-monitoring programme on behalf of Safety Kleen.

Annex 4 comprises the results of the water sampling carried out on the 3rd of December 2007

Interpretation:

Due to the nature of wastes stored at the facility analysis focused on the potential presence of Volatile Organic Compounds (VOC's). In the main, results show that VOC's were detected in the range of 2 to 250 $\mu\text{g/L}$. The licence set no limits however the reporting requirement is to quote groundwater results in mg/l. In this format our results are between one five hundredth and one quarter of one mg/l. The highest contaminant was for Benzoic acid (0.25 mg/l). Benzoic acid is not a waste product collected by Safety Kleen and is likely to be from an external source. We will monitor this in future.

Trends:

Other than benzoic acid being slightly elevated relative to other V.O.C.s, no discernable trends have become apparent since monitoring began at the site.

Resource and Energy Consumption

Energy utilised is solely electricity, for heating and lighting, and running of office, canteen and plant equipment such as the air compressor. The total usage in 2007 was 20,353, units. This amounted to a 31% reduction over the previous years figure. It was achieved through ambitious environmental targets and by ensuring greater energy awareness amongst staff. A target of 10% had been set. However, a big push on the energy awareness message resulted in this significant over-achievement.

Water consumption is restricted to 'domestic' use from the kitchen and toilet facilities on site, and for the formulation of an aqueous product. Currently both uses are not metered separately.

Development Works carried out during the reporting period and Scheduled Works.

During our last EPA audit, it was observed, that there were three emissions to atmosphere points. The licence only permitted one. The three ducts were joined internally and now the only emission point is as per the licence.

Environmental Management Programme

The Environmental Management Programme for the reporting period has been previously submitted to the agency. The Transfer Station achieved ISO14001 – 2004 standard. Safety-Kleen Dublin had its most recent external audited in March 2007. A copy of the Environmental Management Programme is attached as Annex 5.

Progress in implementing existing Environmental Objectives and Targets

Install timer switch to maximise energy efficiency in hot water generation	Switch over	Keith Grubb	Completed
Replace PCs with energy efficient CPUs and monitors	Switch over	IT Dept.	Completed
Switch over to recycled ink cartridges	100% change	Keith Grubb	Completed
Mobile Phone Recycling	Recycle All old mobile Phones	Keith Grubb	Completed
Further Reduce Energy Consumption	5% reduction	Keith Grubb	Completed

Environmental Objectives and Targets for 2007

Table 6. Objectives & Targets for 2007

<i>Measure</i>	<i>Target</i>	<i>Driver</i>	<i>Comments</i>	
Review of EMS	Review the Following: Policy , objectives and targets, aspects and impacts and the register of regulations	Glen Evens	Due Date:	Dec 2008
Review vehicle Spill Investigation Procedure	Update procedure	Glen Evans	Due Date:	Dec. 2008

Procedures developed in the reporting period

Crisis Response Programme.

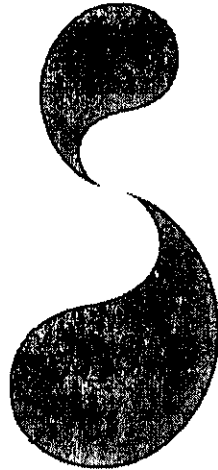

Safety Kleen Ireland has outsourced our crisis response function to Enva Ireland. Annex 6 comprises the services provided.

Reported Incidents and Complaints

There have been no other incidents or complaints within the reporting period.

Staffing Structure/Management

No Changes since the last reporting period.

safetykleen

Report title: Monitoring of emissions to atmosphere at the Safety Kleen Ireland Ltd facility on Airton Road, Tallaght, Dublin 24.

Report by:	Patrick O'Brien	Mary Walsh	 Cormiac Dunne
Approved by:	 Dr. Imelda Shanahan Managing Director		

Terms and conditions

1. Reports shall not be reproduced except in full, without prior approval of TMS Environment Ltd
2. This report relates only to the items tested
3. Complaints should be addressed in writing to the Laboratory Manager

1.0 Scope

This report deals with a survey of emissions to atmosphere from 3 emission sources at the Safety Kleen Ireland Ltd facility on Airton Road Tallaght, Dublin 24.

2.0 Survey protocol

The survey was conducted by TMS Environment Ltd personnel during a visit to the site on 3rd December 2007. Emissions to atmosphere from 3 emission source were monitored. The survey was completed in order to meet the requirements of the company's Waste Licence (Reference no. 99-1). Temperature was measured *in situ* using a thermocouple. The organic substances were analysed by sampling on to activated charcoal adsorption tubes and were analysed by Gas Chromatography-coupled-Mass Spectrometry (GCMS) following solvent desorption in the laboratory. Particulates were collected by isokinetic filtration.

In addition to this, two areas were monitored for organic substances; Solvent Bay and Fugitive point #1. Fugitive point #1 was located between the loading Bay area and Extraction Vent Back Store. All samples were collected over 30 minute sampling intervals. The scope of the survey is summarised in Table 1 together with the sampling and analysis methodologies employed during the project.

3.0 Results

The measurement results are presented in Tables 2 - 5 together with the Waste Licence Emission limits, where applicable.

4.0 Evaluation of results

Emissions to atmosphere are within the Waste Licence Limit Values (Waste Licence Register Number, 99-1) for all parameters measured.

Table 1 Scope of emission survey and sampling and analysis techniques

EMISSION SOURCE	EMISSION PARAMETER	SAMPLING TECHNIQUE	ANALYSIS TECHNIQUE
Extraction Vent Back Store S3	Total Particulates	Isokinetic Filtration	Gravimetry
Extraction Vent Front Store S3	Total Organic Compounds Class A and Class B	Adsorption	GCMS
Clean Room			
Solvent Bay Fugitive Point #1	Total Organic Compounds Class A and Class B	Adsorption	GCMS

1.0 Scope

This report presents the results of an environmental and occupational noise survey which was conducted at Safety Kleen Ireland Ltd. Unit 5, Airton Rd, Tallaght, Dublin 24. TMS Environment Ltd. personnel conducted the survey on the 3rd of December 2007.

The environmental noise survey was conducted in accordance with the requirements of Waste Licence W-0099-01 to assess the existing noise environment at the site. The occupational assessment is compared to legislative requirements of S.I. No. 371 of 2006 Safety, Health and Welfare at Work (Control of Noise at Work) Regulations 2006

2.0 Regional environmental setting

Safety Kleen Ireland Ltd is located in an industrial area off Airton Road in Tallaght, Dublin 24. The site is surrounded by industrial and commercial buildings with Airton Road, Belgard Road and Greenhills Road all in close proximity to the site.

3.0 Existing noise climate

The existing environmental noise climate is mainly influenced by passing and distant traffic noise. Movement of vehicles to and from the surrounding industrial area contribute significantly to the noise levels present.

4.0 Survey Protocol

4.1 Monitoring Locations

The monitoring locations are set out in Schedule F of Waste Licence W-0099-01. A description of the locations is presented below in Table 1 and a sketch map of the locations is presented in Appendix I.

Table 1 Noise monitoring locations at Safety Kleen Ireland Ltd.

Monitoring Location	Description
N1	Inside of building at back wall near emergency exit doors
N2	Outside back of building
N3	In small yard area outside reception
N4	In parking lot area across from Safety Kleen

4.2 Instrumentation and methodology

Noise measurements were made according to the requirements of *ISO 1996: Acoustics - Description and Measurement of Environmental Noise* and in addition, with reference to the 2006 EPA publication, "*Environmental Noise Survey, Guidance Document*". The noise measurements were made using a Bruel and Kjaer integrating sound level meter fitted with 1:1 and 1:3 Octave Band Filters. The instrument was calibrated *in situ* at 94 dB(A) prior to and after use. This instrument is a Type 1 instrument in accordance with IEC 651 regulations. The Time Weighting used was Fast and the Frequency Weighting was A-weighted as per IEC 651. Calibration certificates for the noise meter are presented in Appendix II of this report.

4.3 Survey implementation

The survey was conducted by TMS Environment Ltd personnel on the 3rd of December 2007 during normal operations at the site.

The measurement parameters included observations of prevailing weather conditions at the time of the survey. The main noise measurement parameter was the equivalent continuous A-Weighted Sound Pressure Level, $L_{Aeq, T}$. Noise levels were measured over 30 minute measurement intervals. A statistical analysis of the measurement results was also completed so that the percentile levels, $L_{AN, T}$, for N = 90% and 10% over the measurement intervals were also recorded. The percentile levels represent the noise level in dB(A) exceeded for N% of the measurement time. For all measurements, the microphone of the noise level meter was situated at approximately 1.75m above ground to represent an average persons ear position. A $1/3$ octave frequency analysis was also conducted at each location in order to assess the presence of any tonal component of noise that may be generated by site activities.

Measurements carried out at locations N2, N3, and N4 are representative of environmental noise within the vicinity of Safety Kleen. Location N1 is located inside the building and noise levels monitored typically reflect occupational exposure to noise levels during a normal working day.

With regard to occupational noise the duration of noise is a major factor in determining the likelihood of damage to hearing i.e. the A-weighted noise dose received over a time period. The calculated Daily Personal Noise Exposure ($L_{EP,d}$) at N1 is based on typical exposure durations of the operators. The $L_{EP,d}$ is the 8 hour L_{Aeq} of the person exposed. The L_{Aeq} is the measured continuous equivalent sound level.

The $L_{EP,d}$ expressed as an 8 hour L_{Aeq} value is given as,

$$L_{EP,d} = L_{Aeq} + 10 \log_{10} \text{duration of exposure} / 8 \text{ hour shift}$$

5.0 Survey results

The results for the environmental noise survey are reported in Table 2.

Table 2 Results of Environmental noise survey at Safety Kleen Ireland Ltd. for survey carried out on the 3rd of December 2007

Monitoring Location ^[2]	Time	$L_{Aeq, 30min}$ dB(A)	$L_{A90, 30min}$ dB(A)	$L_{A10, 30min}$ dB(A)
N2	11:50	58	53	59
N3	10:18	55	49	56
N4	10:50	55	51	56

Notes:

- [1] Observed weather conditions at the time of the assessment were dry and sunny with a light breeze.
- [2] Noise monitoring locations are shown in Appendix I.

Table 3 Results recorded at location N1

Monitoring Location ^[2]	Time	L_{Aeq, 30min} dB(A)	L_{Epd}, dB(A)
N1	13:58	71	71

6.0 Evaluation of Results

There are no noise limit values set out in Waste Licence W0099-01 for Safety Kleen Ireland Ltd. However the limit generally set by the EPA in relation to licensed facilities is 55dB(A) during daytime activities.

On review of the results obtained it is evident that noise levels recorded on the 3rd of December 2007 at Safety Kleen Ireland Ltd. range from 55 to 58 dB(A) for locations N2 – N4.

The L_{Aeq} recorded at monitoring location N2 was 58dB(A). This location is situated outside the emergency exit doors located to the back of the plant. On-site observations recorded at the time of the survey indicate that distant traffic noise was a significant noise source at this location with intermittent noise of sirens audible. Humming noise of fans from nearby industrial premises was also present at this location. It was noted during the survey that there was no audible noise emanating from Safety Kleen during the 30-minute survey at this location.

Monitoring location N3 is situated outside the main entrance to Safety Kleen. The L_{Aeq} recorded during the 30-minute survey was 55dB(A). Contributory noise sources present during this survey include: noise of vans / forklift ticking over, moving and reversing inside the Safety Kleen facility. Some movement of barrels within Safety Kleen was also audible. Off site contributory noise sources included noise of activities in adjacent industrial premises and distant and passing traffic noise.

Monitoring location N4 is situated in the car park opposite the Safety Kleen premises. The L_{Aeq} recorded here was 55dB(A). Passing traffic entering and exiting the industrial estate and traffic movement along Airton Rd. were considered to be the main noise source at this location. Observations recorded at the time of the survey indicate that operations within Safety Kleen were not audible during the survey at this location.

On review of the data obtained for the 1/3 Octave Frequency Assessment it is evident that tonal noise was not detected at any of the locations monitored. The resulting graphs from these results are presented in Appendix III.

Monitoring location N1 is situated inside the Safety Kleen facility. The result is therefore compared to the limits set out in S.I. No. 371 of 2006 Safety, Health and Welfare at Work (Control of Noise at Work) Regulations 2006

Article 4 *Exposure Limit Values and Exposure Action Values of S.I. No. 371* describes the following exposure limit values and exposure action values as risk predictors.

- (a) Exposure limit values: $L_{EX,8hr} = 87$ dB(A) and a maximum Peak C-Weighted instantaneous sound pressure level of 140 dB(C), (200Pa).
- (b) Upper exposure action values: $L_{EX,8hr} = 85$ dB(A) and a maximum Peak C-Weighted instantaneous sound pressure level of 137 dB(C), (140Pa).
- (c) Lower exposure action values: $L_{EX,8hr} = 80$ dB(A) and a maximum Peak C-Weighted instantaneous sound pressure level of 135 dB(C), (112Pa).

Article 6 (4) of SI 371, 2006 states if a risk assessment indicates that there are workstations within the place of work where employees are likely to be exposed to noise above 85dB(A), an employer shall -

- (a) display mandatory warning signs, in accordance with the Safety, Health and Welfare at Work (Signs) Regulations 1995 (S.I. No. 132 of 1995), to convey information that-
 - (i) the noise level at that workstation is likely to exceed that upper exposure action value, and
 - (ii) hearing protectors are available and must be worn, and
 - (b) ensure that such workstations are protected by barriers or other suitable means from unauthorised access, where the said measures are technically feasible and where the risk of exposure so justifies such restrictions.
- (5) Subject to Regulation 11, an employer shall ensure that -
- (a) his or her employees are not exposed to noise above the exposure limit value, or
 - (b) if, despite the measures taken to comply with these Regulations, exposure above the exposure limit value is detected he or she shall forthwith -
 - (i) take immediate action to reduce exposure to noise to below the exposure limit value,

The recorded noise level of 71 dB(A) within the Safety Kleen facility does not exceed the lower exposure action value. Therefore there are no recommendations made with regard to the noise levels present.

Type	2260
Serial Number	2217549
Date Received	17 September 2007
Date Callbrated	17 September 2007
Customer	TMS Environment
Address	Dublin 24
Job Reference	106020/1
Accuracy of UUT	Refer to manufacturer's specifications
Test Standards	Solartron 7151 S/N:201910, Advantest R9211B S/N:62020594 B&K 4231 Ser No:2292474

Please Note

An initial Functional test was carried out prior to calibration.

The instrument was allowed to stabilise in the Laboratory environment. A warm-up time of at least ten minutes was allowed before any measurements were taken .

Calibrated with microphone 4189 Ser No 2174750.

The measurements presented in this certificate were obtained using laboratory standards which are traceable to national standards or derived by approved techniques. Relevant standards and specifications are quoted, as appropriate, together with details of any special procedures utilised. The copyright of this certificate is owned by AML. The information detailed herein is provided in good faith. however, AML can accept no responsibility for the consequences of any errors or omissions.

PROCEDURE

The sound level meter was calibrated at a frequency of 1000 Hz with a Bruel and Kjaer 4231 reference sound level calibrator. The Calibration level was set to 93.8 dB.

An equivalent electrical signal which then used to measure the response of the A-weighted/C-weighted/LIN filters, the linearity of the meter attenuator and the accuracy of the signal level indicator.

The additional frequency weightings were checked electrically and were found to conform.

RESULTS

Calibration

Applied	Before Adjustment	After Adjustment
93.8	93.8	93.8

The estimated total uncertainty in the applied voltage is $\pm 0.25\text{mV}$.

SLM Response: Fast

Range: 100

Filter: LIN

The uncertainties quoted in this certificate relate only to the measured values obtained at the time of test and carry no implication regarding the long term stability of the instrument under test.

The uncertainties are for a confidence probability of not less than 95%.

1.0 Scope

This report deals with the collection and analysis of a groundwater sample obtained at the Safety Kleen site at Airton Road, Dublin 24.

2.0 Methodology

TMS Environment Ltd. personnel took a sample from monitoring location MW 98-1 on the 03rd of December 2007. The sample was taken and transported in accordance with the TMS Environment Ltd. procedures relating to the collection of groundwater samples.

The sample was analysed in accordance with the procedures in Standard Methods for the Examination of Water and Wastewater, 20th Edition, 1998, and the methods of analysis are included in the laboratory test report presented in Appendix I.

3.0 Results

The measurement results are presented in the attached Laboratory Test Report. All parameters analysed were found to be below the limit of detection.

1. ENVIRONMENTAL PHILOSOPHY

SAFETYKLEEN ENVIRONMENTAL PHILOSOPHY

Safetykleen is an organisation committed to providing environmental security and protection to our customers in both the private and public sectors, to our employees, and to the communities in which we operate.

Each Safetykleen employee will ensure that high standards of health, safety and environmental protection are enforced and observed at all times.

We will work closely with regulatory agencies and industry associations to develop and comply with sound environmental protection policies. We will act quickly to implement new environmental protection initiatives and will maintain a standard that surpasses our legal responsibilities.

We will recycle, reuse and recover resources as an alternative to disposal wherever technically feasible and economically viable.

We will routinely conduct environmental audits of our operations and will act promptly to respond to any deficiencies we may find.

Our Board of Directors and Executive Management will monitor each operating unit and will ensure that these principles are maintained.

Hyman K Bielsky, Chairman of the Board

2. ENVIRONMENTAL MANAGEMENT MANUAL DISTRIBUTION LIST

A controlled, electronic copy of Environmental Policy and Procedures is available in the electronic Q.A. database and the following list shows some of the functional users who have access.

Chief Executive Officer

Northern European Director

Country Operating Manager

National Sales Manager

Regional Sales Managers

Area Sales Managers

UK Marketing Manager

Financial Controller

UK Operations Manager

Environmental Officer and D.G.S.A.

Transport Manager

Dinnington Recycle Centre Manager

Dinnington Distribution Centre Manager

Works Chemist

Technical Operations Manager

Safety Officers

Branch Maintenance and Development Manager

Branch Managers

Facility Administrators

Quality Assurance Manager

3. AMENDMENT RECORD

This Environmental Management Manual acts as the central reference index and guide to all of the environmental aspects and impacts of the company's business. It therefore requires continual revision and updating as the company's environmental management systems and procedures develop. A controlled, electronic copy of this manual is available on the Q.A. Manuals database to all authorised users.

All amendments to the controlled Environmental Management Manual, including changes of issue and revision status are listed in the accompanying Amendment Record table. The Certification Body (SGS UNITED KINGDOM LTD) is notified of all changes at each external audit and a single copy of each obsolete issue is retained in the company's documentation archive.

ISSUE	REVISION	AMENDMENTS	DATE	APPROVED
1	0	First draft	01/2000	ESC
2	1	General Revision	04/2000	ESC
2	2	Changes to responsible persons list	06/2002	Operations dept. meeting
2	3	Revision to 14001:2004	08/2005	Operations dept. meeting
2	4	Revision to 14001:2004	09/2005	Operations dept. meeting

4. ENVIRONMENTAL MANAGEMENT MANUAL

a) Introduction

This document describes the company's **Environmental Management System** and summarises the procedures and practices which have been implemented to ensure that the system complies with the requirements of the international environmental management standard ISO 14001:2004.

b) Contents

The numbering sequence in this manual follows the numbering of the clauses and sub-clauses in section 4 of the environmental standard ISO 14001:2004:

Section	Title	Page No.
4.1	General Requirements	
4.2	Environmental Policy	
4.3	Planning	
4.3.1	Environmental Aspects	
4.3.2	Legal And Other Requirements	
4.3.3	Objectives, Targets, And Programme(s)	
4.4	Implementation And Operation	
4.4.1	Resources, Roles, Responsibility And Authority	
4.4.2	Competence, Training, And Awareness	
4.4.3	Communication	
4.4.4	Documentation	
4.4.5	Control Of Documents	
4.4.6	Operational Control	
4.4.7	Emergency Preparedness And Response	
4.5	Checking	
4.5.1	Monitoring And Measurement	
4.5.2	Evaluation And Compliance	
4.5.3	Nonconformity, Corrective Action, And Preventative Action	
4.5.4	Control Of Records	
4.5.5	Internal Audit	
4.6	Management Review	
Appendix 1	List of Environmental Control Procedures (integrated into Quality Procedures).	
Appendix 2	List of Environmental Control Procedures (integrated into Branch Working Instructions).	
Appendix 3	Correspondence between ISO 14001:2004 and ISO 9001:2000.	

4.1 GENERAL REQUIREMENTS

The Company's Environmental Management System (EMS) is organised into the following components:

- a) Operations Department Meetings
- b) Environmental Management Manual
- c) Procedures and Work Instructions
- d) Registers (Environmental Aspects, Regulations and Approved Suppliers)

a) Operations Department Meetings

Meetings:

These are held at least quarterly, or more frequently if the situation demands. Branches channel ideas or suggestions for improvement through their Safety Committee meetings. Sub-Committees may be arranged at any time if required for particular purposes.

Typical Membership:

Operations Manager (Chairman)	Fleet Distribution Manager
Branch Distribution manager	Distribution Centre Manager, Dinnington
Branch Safety Officer	Environmental Officer and DGSA
Facility Services Manager	Quality Assurance Manager
Recycle Centre Manager, Dinnington	Dinnington Site Environmental & Safety Officer

Purpose:

- To ensure that the Environmental Management System (EMS) has been implemented to meet the requirements of **ISO 14001:2004** and continues to operate effectively.
- To ensure that the **environmental policy (4.2)** is understood, implemented and maintained at all levels throughout the company.
- To assess the magnitude and significance of all **environmental impacts (4.3.1)** arising from the company's activities.
- To ensure that all legal and other environmental regulatory requirements (4.3.2) are met.
- To set clear environmental objectives, targets, and programmes (4.3.3) and monitor progress against them.
- To discuss and implement improvements to the environmental performance of the Company and to reduce any undesirable impacts the company's activities may have on the environment.
- To keep abreast of relevant developments in environmental science and technology and keep senior management informed.
- Minutes of the meetings, and any resulting action points, are recorded and distributed to the membership and all users of the QA System.

b) Environmental Management Manual

This document serves the following purposes:

- It describes the Environmental Management System operated at all the Company's UK and Ireland Operating Centres.
- It serves as a link and cross-reference between the requirements of ISO 14001:2004 and the environmental documentation in use by the company, i.e. register of environmental aspects, register of regulations, procedures and work instructions.
- It serves as a link and cross-reference to the Company's Quality Management System, certified to ISO 9001:2000, which co-ordinates both quality control and environmental control procedures within a single, integrated procedures section in the electronic QA System.

c) Procedures and Work Instructions

Procedures and Work Instructions dealing with environmental matters are integrated into the ISO 9001 quality system. The complete list of environmental control procedures is to be found in section 500 of the company's electronic QA, see Appendix I. Many of the basic quality control procedures in section 400 of the procedures section have also been amended to take account of any environmental aspects for particular activities reproduced in Appendix 2.

These procedures, and their accompanying work instructions, support the Environmental Management Manual and the registers by providing a description of the work practices required to maintain compliance with ISO 14001:2004.

d) Registers

The **Register of Environmental Aspects (4.3.1)** records all significant environmental impacts arising from the company's activities and provides the basis for setting **improvement Objectives, Targets, and Programmes (4.3.3)**.

The **Register of Environmental And Other Regulations (4.3.2)** records all applicable legislation and regulations that the company is required to comply with. It also includes relevant health & safety, transport - as well as environmental legislation.

A **Register of Approved Suppliers** is kept by relevant department managers who record all of the company's suppliers of goods and services as required by the ISO 9001 quality system. Part of the evaluation and approval procedure is concerned with suppliers' environmental performance.

4.2 ENVIRONMENTAL POLICY

Safetykleen is the market leader for the provision of parts cleaning, spraygun cleaning and waste services. The machines offered as part of the service to the customer includes the supply of either water based chemistry or solvents, depending upon the application and the concerns of the customer.

The foundation of the machine service is the closed-loop system whereby customers receive the cleaning equipment with the cleaning fluid and used waste fluid is collected from the customer's process and either recycled or disposed of responsibly.

The Company's policy of recycling solvents for re-use has a key impact on reducing the dependence on fossil fuels and its resultant effect on the environment. The marketing strategy of providing recycled solvents has wide customer acceptance and is a key differentiating factor in the Company's sales proposition.

Waste services offer a unique national service for the identification, carriage, and onward disposal of waste materials for the small and medium sized producer, where disposal always follows the accepted "Waste Hierarchy" and "Best Practice" principles whenever practicable.

All the operating units within the organisation subscribe to this policy, which is determined by the Senior Management Group, in accordance with the general principles stated in the Safetykleen Environmental Philosophy.

The current policy is as follows:

- a) Safetykleen will manage its activities in ways that reduce their environmental impact to a practicable minimum.
- b) The company is committed to the continual improvement of its environmental performance and the prevention of pollution, and intends to achieve this by setting clear environmental objectives and regularly monitoring progress against them.
- c) In order to regulate the environmental performance of the company, Safetykleen will operate a management system meeting the requirements of ISO 14001:2004.

Safetykleen will:

- Ensure that this policy is understood, implemented and maintained at all levels throughout the company.
- Ensure that its employees are aware of the potential environmental impacts of their activities and the environmental benefits of improved performance.
- Provide public access on request to information on the company's environmental performance.
- Design new buildings and develop sites in ways that will blend as sympathetically as possible with the surroundings.
- Conserve and protect the environment by operating in a socially responsible manner according to the highest standards of environmental management available and the application of strict quality assurance and health and safety disciplines.

- Comply with all existing regulatory legislation, consents and codes issued at European, national and local levels, and be aware of pending developments in anticipation of future, more stringent, regulatory requirements.
- Design, operate and maintain all plant and equipment to the highest practicable standard and improve working practices as and when new technology becomes available, wherever practicable.
- Set objectives and targets for continual improvement, including the prevention of pollution, as defined in the company's Register of Environmental Aspects.
- Aim for maximum process efficiency so as to minimise consumption of energy and water and minimise the quantity of unrecoverable process waste requiring disposal into landfill.
- Provide appropriate environmental training for all employees and promote and encourage the pursuit of environmental excellence not only within the company itself, but also throughout its suppliers and customers.
- Carry out regular environmental audits of all aspects of the company's business, both to ensure effective implementation of environmental policy and to lessen the risk of operational failures that might lead to environmental damage.
- Adopt the least environmentally damaging transport strategy wherever practicable for the company's own vehicles, and encourage outside haulage contractors to do the same.
- Deal only with reputable, registered and licenced waste carriers who have been vetted by the company and whose premises, transfer stations, disposal facilities, and operations are subject to regular inspection and auditing.
- Provide advice to customers on the correct handling, treatment, segregation, and storage of waste oils, solvents, and process residues prior to collection by the company.

This policy is displayed at all Company sites and is available via the company's website or as a printed copy on request by any interested party.

Safetykleen's registration is to the following scope:

1. The supply, waste removal, recycling and replenishment of solvents, which are used in machines provided for the degreasing and cleaning of component parts and equipment.
2. The design, construction, and supply of machines and related equipment intended to be used for automated or manual cleaning processes using liquids.
3. The supply of ancillary products (such as absorbent socks) for liquid spill cleanup and subsequent collection and disposal of associated wastes.

Signed: 
Steve Brain, C.E.O.....

Date: 1st September, 2005

4.3 PLANNING

4.3.1 Environmental Aspects

The company has compiled a separate **Register of Environmental Aspects**, which is used as the basis for setting its environmental objectives, targets and programmes. The document also includes the Company's procedures for identifying environmental impacts and evaluating their significance, and the procedures for the actual compilation and maintenance of the Register, ensuring that the information is kept up to date.

4.3.2 Legal And Other Requirements

The company has compiled a separate **Register of Environmental Regulations**. The procedures for identifying applicable primary statute legislation and enacting regulations are housed within the document itself, together with the procedures for the actual compilation and maintenance of the Register to ensure that the information is kept up to date. The **Register of Environmental Regulations** also lists other requirements relevant to the Company's business, such as the IPC process authorisation and waste contractor documentation, and is used in the assessment of environmental impacts.

4.3.3 Objectives, Targets, and Programme(s)

a) List of Environmental Objectives

The environmental objectives of Safetykleen are selected and managed according to **procedure QP10.I**. The current objectives are listed in the Environmental Management Manual

b) Environmental Targets

For each objective various targets have been set against which progress can be measured. The methodology for setting the targets is described in the **environmental procedure EP12**. The actual targets themselves are set out in the Environmental Management Manual

c) Environmental Improvement Programme

The current environmental management improvement programme, with assigned responsibilities and initial target completion dates, is fully described in the **environmental procedure EP12**. Continuing Progress with this programme, including any re-setting of target completion dates and objectives, is reviewed and minuted during Operations Department meetings.

4.4 IMPLEMENTATION AND OPERATION

4.4.1 Resources, Roles, Responsibility, And Authority

The Company's organisation for Quality, Health and Safety, and the Environment, together with management roles, responsibilities and authorities are comprehensively described in the company's **Quality Assurance Manual and Health and Safety Policy**. These responsibilities have been extended for certain individuals to cover the requirements of the EMS.

The following describes the **additional responsibilities of personnel under the EMS**:

The **Country Operating Manager** is responsible for:

- a) Ensuring the achievement of the company's financial objectives whilst maintaining a reasonable level of environmental spend.
- b) The company's environmental policy and reputation for environmental probity.
- c) Ensuring that all aspects of environmental protection throughout the company are properly addressed.
- d) Providing an annual overview of environmental performance for all company stakeholders and employees.
- e) Convening the management review of the EMS;

The **Quality Assurance Manager** is responsible for:

- a) Implementing the EMS and ensuring that all environmental control procedures are being adhered to.
- b) Compiling and maintaining all EMS documentation, i.e. manual, procedures, registers and environmental performance records.
- c) Co-ordinating all environmental audit programmes and controlling the activities of pollution monitoring staff, particularly the taking of effluent samples and their analysis consent parameters, as and when required.
- d) Resolving environmental problems and implementing long-term preventive measures.
- e) Evaluating the environmental credentials of all suppliers and sub-contractors.
- f) Co-ordinating the activities of the Operation Department meetings and authorising any changes to environmental objectives and targets recommended by the meeting and/or the Management Review body.
- g) Compiling all environmental data and performance records for inclusion in the company's **Register of Environmental Aspects**.
- h) Approving the issue of the **Register of Environmental Aspects** and the **Register of Environmental Regulations**.
- i) The co-ordination of all environmental training activities, including internal and external courses.

The Quality Assurance Manager is the Company's **Environmental Management Representative** in fulfilment of the **ISO 14001** requirement, as set out in **section 4.4.1.** and therefore has the following additional responsibilities:

- j) To ensure that environmental management system requirements are established, implemented and maintained in accordance with the **ISO 14001:2004** standard.
- k) To report on the performance of the EMS to top management for review and possible improvement of the EMS.

The **Environmental Officer and D.G.S.A.** is responsible for:

- a) Investigations into the development of cleaner, more efficient technologies and less environmentally damaging products, better utilisation of raw materials, energy/water saving measures and better effluent control in close collaboration with the RC/DC Managers.
- b) Providing technical expertise to assist in the resolution of environmental problems.
- c) Keeping the company abreast of all technical and "best practice" developments in environmental management and control.
- d) Ensuring that the design, development and validation of new processes and products and takes account of their environmental implications.
- e) Negotiating with regional suppliers on all aspects of water supply and wastewater treatment.
- f) Resolving all nuisance or other environmental complaints.
- g) Collecting data on the company's environmental impacts and informing the Quality Assurance Manager of the findings.
- h) Collecting information on environmental statutes and regulations and briefing the Technical Operations Manager as required.
- i) Carrying out modifications to plant and equipment arising from internal audits, Operations Department meeting recommendations or the requirements of process line management.
- j) Implementing environmental improvements in all office-based activities, such as the development of recycling schemes for all office materials in general and a lowering of paper consumption in particular.

The Dinnington RC/DC Managers and the various Regional Managers, Area Sales Managers, Branch Managers and Facility Administrators are responsible in their own individual areas for:

- a) Ensuring that environmental issues are taken into account in the formulation of production strategies and plans.
- b) Ensuring that all operational staff properly understand the environmental implication of all materials handling and storage activities.
- c) The provision of effective environmental protection equipment and/or procedures throughout the factory and other facilities.
- d) Protecting site installation and drainage systems in emergencies, particularly in the event of leaks or spillages.
- e) All aspects of waste management including supervising the disposal of all wastes, keeping dossiers on all registered waste carriers and licensed waste disposal facilities for the company's wastes, and ensuring compliance with the Duty of Care requirements of the Environmental Protection Act 1990 (in the case of SKI, Waste Management Act, 1996) and other regulations, such as the Hazardous Waste (England and Wales) Regulations 2005.
- f) Developing in collaboration with other departmental managers, appropriate systems and procedures for the re-use and/or recycling of packaging waste.

The site **Safety Officers** are responsible for:

- a) Co-ordinating all health & safety activities, including COSHH and contingency planning for fires, accidents and other emergencies, such as spillages and other environmental incidents.
- b) The maintenance of safety training records, with the assistance of the Quality Assurance Manager.

The **Sales and Marketing Managers** are responsible for:

- a) Ensuring that environmental issues are properly addressed in the formulation and implementation of the company's sales and marketing plans.
- b) Ensuring that all sales and marketing staff are well briefed in the environmental issues referred to in the company's **Environmental Policy**.
- c) Ensuring that all staff dealing with customer services, enquiries and complaints have an awareness of environmental issues and can respond authoritatively to environmental queries.

The **Transport Managers** are responsible for:

- a) Ensuring that all Company transport requirements are met.
- b) Ensuring that environmental issues are taken into account whenever the Company's transport strategies are planned.
- c) Providing data on transport usage as a key indicator of the Company's environmental performance.
- d) Evaluating the environmental credentials and approving all transport contractors used by the company.

The **Facility Services Manager** is responsible for:

- a) Maintaining the site plans and identifying, in consultation with the Quality Assurance Manager, the Environmental Officer and D.G.S.A., Safety Officers, and Facility Administrators, all areas of environmental risk.
- b) Co-ordinating the activities of all maintenance personnel.

Other Managers, Supervisors and Personnel

All Company employees are required to have an awareness of the possible environmental consequences of their actions, and are encouraged to report any adverse conditions and suggest improvements. The Company has assigned the following resources and personnel for ensuring the effective implementation of specific parts of the EMS:

Operations Department Meetings:

- The ISO 14001:2004 Environmental Management System.
- Policy Making, Target Setting; Improvement Programmes.
- Corrective/Preventive Actions.

Quality Assurance Manager:

- Environmental Audits.
- Environmental Monitoring.
- Environmental Documentation/Document Control

Recycle Centre Manager

- PPC Process Authorisation

Trained Auditors

- Environmental audits

RC Safety and Environmental Officer / Laboratory Staff

- Environmental monitoring

Environmental documents and records available for performance verification purposes are:

- The Register of Environmental Aspects.
- The Register of Environmental Regulations.
- The Register of Approved Suppliers (part of the ISO 9001 Quality System).
- The Procedures Section of the QA System.
- Company records, log books, and correspondence

Other resources, including outside consultants, new specialised equipment and an appropriate budget, are made available, wherever practicable, on the request of the Operations Department meeting.

4.4.2 Competence, Training, And Awareness

Training needs, particularly for persons performing environmental control tasks, are identified by line managers at appraisal, and subsequently implemented by line management, in conjunction with the Quality Assurance Manager.

The company provides essential environmental training and instruction for its employees in all relevant functions and at all levels by means of:

- Distribution of the environmental policy statement.
- Initial environmental awareness sessions as part of the company's preparations for ISO 14001 registration.
- Regular company training topics, coordinated by the Quality Assurance Manager.
- Involvement of as many staff members as possible in environmental procedural compliance auditing.
- External environmental training courses.

Through the above media the company ensures that employees are aware of:

- The necessity for complying with all of the EMS requirements, including the environmental policy and procedures.
- The potential for significant environmental impact in their activities and the overriding need to improve personal performance.
- Their precise roles and responsibilities within the EMS, including their contributions to emergency preparedness and rapid response.
- The possible environmental consequences of not adhering to specified operating procedures.

No employee is permitted to carry out any activity, which has the potential to cause significant environmental harm unless he/she has the appropriate level of education, training and/or experience, and can also demonstrate adequate competence during procedural audits. Certain staffs are required to have certificates of technical competence (COTCs) issued by WAMITAB and are required to provide cover, as required by individual

site working plans. DGSA qualified personnel are required in both UK and Republic of Ireland.

4.4.3 Communication

All environmental matters, including those that come within the scope of the EMS, are communicated internally via the Environmental Officer and D.G.S.A. and the channels listed in 4.4.2. External communications with relevant interested parties, including responses to enquiries or complaints, are handled by local site management, in conjunction with either the Technical Operations Manager or the Environmental Officer and D.G.S.A.

The Environmental Officer and D.G.S.A. keeps a dossier of enquiries and complaints, including a record of decisions reached and keeps the Operations Department meeting informed of progress towards resolving complaints.

4.4.4 Documentation

The Company has a fully documented EMS, as summarised in section 4.1, **General Requirements**. The Environmental Management Manual is the central "signpost" document for the entire EMS, and provides an initial access point for the following:

- **Procedures**, issued as a separate section in the electronic QA System, which combines both quality control and environmental control procedures and working instructions.
- Register of environmental aspects, issued as a separate section.
- Register of environmental regulations, issued as a separate section.
- **Register of approved suppliers**, issued as a separate section.
- **List of environmental performance records**.

These related documents are fully cross-referenced in appropriate sections of this manual.

4.4.5 Control Of Documents

a) Manual

This manual is controlled and issued as follows:

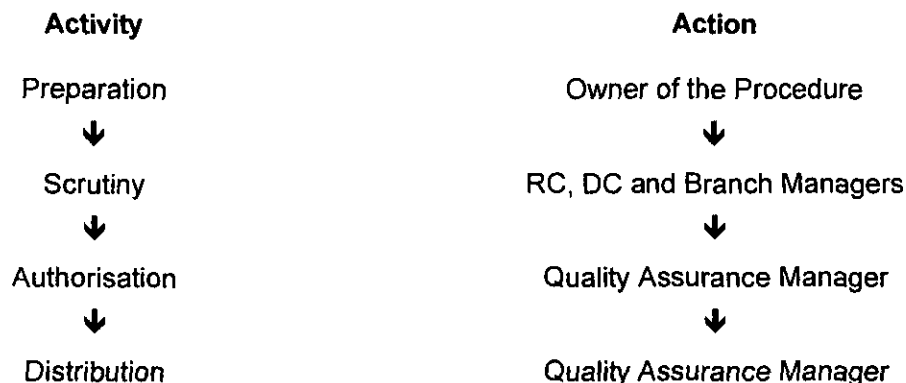

The full sequence is described in **procedure QP5**.

b) **Registers**

The **Register of Environmental Regulations**, the **Register of Environmental Aspects** and the **Register of Approved Suppliers** are controlled and issued in the following sequence according to **procedure QP5**:

c) **Procedures And Working Instructions**

The supporting **procedures and working instructions** are controlled and issued in the following sequence according to **procedure QP5**:

d) **Documents of External Origin**

- a) Company facilities receive documents, such as letters, audit or visit reports, enforcement notices, permits, etc. from official bodies such as the Environment Agency, Health and Safety Executive, Medical Practitioners. These documents are controlled by the local department managers concerned using the following procedure:

- i) Take the appropriate action required by the document. This may include sending copies to other departments or senior managers; for instance, medical reports to Human Resources Department, or permits to the Operations Department.
- ii) Control the document by securely filing locally.

- b) General regulatory or commercial documents and certificates, which are sent to the Q.A. department, can be issued to the electronic QA system for access through the Company's intranet.

4.4.6 Operational Control

a) General

- a) The Operations Department Meeting ensures that all significant environmental impacts are identified and entered in the **Register of Environmental Aspects**.
- b) The Quality Assurance Manager, in consultation with the RC and DC Managers and Branch Managers, ensures that detailed quality procedures and work instructions are provided for all areas of environmental sensitivity requiring close operational control for their protection.
- c) The Environmental Officer and D.G.S.A., in consultation with the RC/DC/Branch Managers, defines the level of operational control, verification, measurement and testing required by the Company after due consultation with the local authority, water company and Environment Agency, and any relevant national or EU regulations.

b) Control

The following is a list of all activities, which, in the Company's judgement, require close operational control:

- a) Disposal and control of effluent from process activities are described in **environmental procedures EP1 and EP11**.
- b) All spillages inside factory buildings are contained using absorbent materials, collected, and disposed of appropriately to prevent spillages into the drains. "Outside" surface water drains on the Dinnington site and some branches are routed to central interceptors or tanks, and all staff are required to comply with spillage procedures described in **procedures EP1, EP2, and some BWI's that relate to Surface Drainage Protection**, to protect the sites' drainage systems.
- c) Waste disposal and Duty Of Care is controlled in accordance with **procedure EP6**, ensuring that the company meets the 'Duty of Care' requirements (Part II) of the **Environmental Protection Act, 1990** and the **Hazardous Waste Regulations, 2005**. (Waste Management Act 1996 in the case of the Republic of Ireland). 'Waste' in this context means wastes remaining from the company's own processes which require disposal.
- d) Particular attention is paid to the protection of the ground, groundwaters and surface waters during delivery and storage of bulk liquids, such as waste oils and solvents collected from the Company's customers. Handling of such liquids is controlled according to **procedures EP1, EP2, and EP3**.
- e) Emissions of VOC are controlled as part of the company's IPC (or future PPC) Process Authorisation for which **procedures EP4** applies. Management of VOC emissions is also specified in the SK Dublin branch's waste licence conditions.
- f) Fire prevention is paramount as the Company handles very large quantities of flammable liquids. As the products are so easily combustible, the main prevention measures are strict adherence to fire prevention procedures as described in **procedure EP2**.

- g) The management of the site including maintenance of the Site Plan and environmental control procedures for the storm drains is described in **procedure EP1**.
- h) The monitoring of energy usage and the conservation measures in place are described in **procedure EP7**.
- i) Control of goods vehicles and the control of fuel storage and usage are described in **procedures QP7g, EP1, EP2, and EP7**.
- j) All suppliers and outside contractors engaged in activities that could have an impact on the environment, e.g. off-loading oils and chemicals, are only permitted to do so under the supervision of Company staff. The environmental credentials of all approved suppliers and sub-contractors are vetted according to **procedure QP6 and QP7g**.
- k) Control of nuisance complaints that could develop into statutory nuisance problems for the Company are dealt with according to **procedure EP9**.

4.4.7 Emergency Preparedness And Response

The company has a separate **Health & Safety Management System** that is designed to ensure full compliance with all applicable health and safety legislation and enacting regulations (see the **Register of Environmental Regulations**). This system also deals with the environmental implications of accidents and emergencies; all procedures are reviewed, and if necessary revised, each time an accident, incident or emergency occurs.

The control of fires and general emergencies is described in **procedure EP2** and the documents "**Dinnington Site Emergency Plan**" and "**Crisis Management Manuals**".

4.5 CHECKING

4.5.1 Monitoring And Measurement

The company has allocated the resources of its Quality Control and Production departments to the inspection, monitoring and measurement, where appropriate, of all its environmentally sensitive aspects. The procedures employed for process and service inspection, monitoring and measurement are described in **procedures QP7, and EP5**.

Laboratory staff sample process effluent at intervals determined by the RC and DC Managers in the event of threatened or actual breaches to consent limits. The effluent sampling and analysis methods are described in **procedure EP11**.

All environmental monitoring equipment is calibrated and maintained according to **procedures QP7, and EP5**. Full calibration records are kept by the **RC/DC Managers**.

The procedure for maintaining the company's **Register of Environmental Regulations** to ensure on-going compliance with environmental legislation and regulations is described in the Register itself.

Monitoring of the company's overall environmental performance against selected indicators is carried out by means of the regular Operations Department meetings and Management Review meetings.

4.5.2 Evaluation of Compliance

All environmentally sensitive areas within the company are subject to regular internal auditing, as described in section 4.5.4 and procedure QP11.

Third party audits, such as Duty-Of-Care and Haulers, that require a professional judgement, are carried out by the Company's appointed D.G.S.A. on suppliers and sub-contractors, according to procedures QP6, QP7 and QP11.

4.5.3 Nonconformity, Corrective Action, And Preventive Action

In the event of an operational incident, compliance issue, or audit non-conformance, the Quality Assurance Manager raises a Corrective Action Report (see procedures QP9 and QP11) and initiates the following action:

- a) If the non-conformance, etc is serious, line management are required immediately to take counter measures, and an extraordinary meeting of the Operations Department is convened. If the non-compliance is not serious, it is held over for discussion at the next Operations Department meeting.
- b) At the Operations Department meetings, the following actions are required:
 - i) Ensure restoration of conformance or compliance as quickly as possible following an internal audit.
 - ii) Investigate the cause of the non-conformance.
 - iii) Initiate corrective action.
 - iv) Review procedures and institute longer-term preventive measures.
 - v) Establish, report and correct any adverse environmental impacts arising from operational incidents as quickly as possible. If preventive action requires implementation over an extended period, it is listed as an improvement objective in procedure EP12.

4.5.4 Environmental Management Records

Environmental performance records are maintained in electronic (diskette) form and on paper. The environmental records kept by the company are as follows:

Manual Section	Type of Record	Held by	Minimum Retention Period
4.1	Minutes of Environmental Steering Committee meetings	Quality Assurance Manager	10 yrs
4.2	Environmental Policy	Quality Assurance Manager	10 yrs
4.3	Register of Environmental Aspects	Quality Assurance Manager	10 yrs
4.3	Register of Environmental Regulations	Quality Assurance Manager	10 yrs
4.3	Environmental objectives and targets	Quality Assurance Manager	10 yrs
4.3	Environmental management programme	Quality Assurance Manager	10 yrs
4.4	Consents to discharge trade effluent to sewer	Safety and Environmental Department	20 yrs
4.4	Materials handling/storage records	RC/DC/Branch Managers	3 yrs
4.4	COSHH records	Safety and Environmental Department	3 yrs
4.4	Purchasing records	Accounts Department	3 yrs
4.4	Site plans and drawings	Site Engineer	20 yrs
4.4	Waste disposal records	RC/DC/Branch Managers	10 yrs
4.4	Dossiers of waste contractor registrations	Safety and Environmental Department	10 yrs
4.4	Transport records	Transport Manager	3 yrs
4.5	Environmental management manual	Quality Assurance Manager	10 yrs
4.5	Quality procedures	Quality Assurance Manager	10 yrs
4.5	Training records	Training Manager	2 yrs*
4.5	Standard specifications (e.g. ISO 9001, ISO 14001)	Quality Assurance Manager	10 yrs
4.5	Test and analytical methods	Quality Assurance Manager	10 yrs
4.5	VOC emission records monthly report	Safety and Environmental Department	3 yrs
4.5	Incident reports	Safety and Environmental Department	3 yrs
4.5	Environmental management system audit programmes	Quality Assurance Manager	10 yrs
4.5	Non-conformance reports	Quality Assurance Manager	3 yrs
4.5	Corrective/preventive action reports	Quality Assurance Manager	3 yrs
4.6	Third-party surveillance audit reports	Quality Assurance Manager	3 yrs
4.6	Minutes of environmental management reviews	Quality Assurance Manager	3 yrs
			3 yrs

*Training records are retained for a period of two years beyond termination of employment.

4.5.5 Internal Audit

General

The Company has established a procedure **QP11** for carrying out audits of both the quality and the environmental management systems. Audits are systematically carried out not only to ensure continued compliance with the requirements of the management systems, but also to identify any unreported areas of environmental risk.

The audit programme for the EMS is maintained and managed as an integral part of the ISO9001: 2000 quality system.

Audit Programme

The audit programme sets out the audit activities, which reflect the clauses of ISO 14001:2004, and their frequencies. Audit activities are prioritised, such that the more important topics and clauses dealing with areas of particular environmental sensitivity are audited more frequently than the rest.

The audit programme may be modified in the light of changing priorities set by the Operations Department meeting.

4.6 MANAGEMENT REVIEW

Reviews of the effectiveness of the EMS by top management are routinely held at least once a year to coincide with the **Quality and Health and Safety Senior Management** reviews, but additional reviews might be held if the need arises. Review meetings are chaired by the Country Operating Manager, and minuted to ensure that any issues raised are actioned.

The agenda for the Management Review might be wide-ranging, but will always include the following items:

- a) Results of internal audits and evaluations of compliance with legal requirements and other requirements to which the organisation subscribes; including nonconformities and the status of corrective and preventive actions, and revisions to the audit programme.
- b) Communications from external interested parties, including complaints and incident reports.
- c) The environmental performance of the organisation including:
 - i) The continuing suitability of the environmental policy and the extent to which its associated objectives and targets have been met
 - ii) Any revisions to the environmental improvement programme, and the effectiveness of operational controls.
 - iii) Review of green issues and marketing pressures.
 - iv) Review of operational changes and their environmental implications.
 - v) Review of training needs.
- d) Follow-up actions from the previous management review.
- e) Changing circumstances, including developments in legal and other requirements, and amendments, if necessary, to the Register of Environmental Regulations and the Register of Environmental Aspects.
- f) Recommendations for further environmental improvement

The review is also used to determine whether the anticipated benefits from implementing the ISO 14001 system are working through. These benefits may include:

- Reduction in energy, water consumption, and waste.
- Fewer accidents, incidents and other emergencies.
- Fewer complaints, claims, prosecutions, fines and other liabilities.
- Avoidance of personal liabilities.
- Better corporate image and marketing capability.
- Better quality of products and services.
- Improved staff morale and better community relations.

Minutes of the review meeting are distributed to all those with EMS responsibilities (4.4.1) and the originals are retained by the Quality Assurance Manager.

OIL SPILL PROCEDURE TO FOLLOW:

FAO: Keith

COMPANY: Safety Kleen
Unit 5, Ailton Road
Tallaght
Dublin 24

22nd May 2007

In the event of an oil spillage on your client's premises, Enva provide a 24-hour, 7 day a week Spill Response Service throughout the Republic of Ireland, designed to minimise the environmental impact of an oil related accident/incident.

In the event that an oil spill occurs on your client's property/site, you should advise your client to call 057 8678650 or 1850 504 504, which will divert to the Team Leader of the Spill Crew that are assigned to that particular week, with the following details:

- The type of oil spillage and the quantity (approx.)
- Where the spill is – is it contained or can it flow freely into a water supply/drains etc.
- The full address of where the spill occurred and a contact name and number on site

The 24-hour Emergency Spill Response Unit includes:

- Van & trailer unit containing a high level of emergency equipment, including booms, ecosorb etc.

Emergency spill equipment maintained by Enva includes:

- Oil Skimmer units
- Interceptors
- Fast Tanks
- Air pumps/hydrostatic pump
- Intrinsically safe torches/radios
- A range of containment/absorbent booms
- Mobile generators/welders/lighting
