

## **ATTACHMENT F1 – Treatment, Abatement and Control Systems**

There is an established programme of the environmental monitoring at the application site which complies with requirements of the waste permit issued by Kilkenny County Council. No limit values for environmental emissions arising from the established activities are identified by the existing waste permit. It is expected that such limits will be set by the EPA should it decide to issue a waste license in respect of the application site.

Environmental sampling, monitoring and testing will largely be undertaken by independent external consultants as required. Records of the environmental monitoring and testing will be maintained on site and will be forwarded to the EPA as required under the terms of the waste license.
