

ANNUAL ENVIRONMENTAL REPORT

For

BALBANE LANDFILL SITE Co. Donegal

Waste Licence Reference: W0090-1

**By
Donegal County Council
For
Environmental Protection Agency**

Reporting Period:

January to December 2008

March 2008

TABLE OF CONTENTS

	<u>Page No</u>
1.0 Introduction	2
2.0 Reporting period	2
3.0 Waste Activities carried out at the facility	3
4.0 Quantity and Composition of waste received and disposed of during the reporting period and each previous year.	4
5.0 Summary report on emissions, results and interpretation of environmental monitoring.	5
6.0 Volume of leachate produced and volume of leachate transported / discharged off site	7
7.0 Report on development work undertaken during the reporting period, and a timescale for those proposed during the coming year.	7
8.0 Report on restoration of completed cells/phases	7
9.0 Site survey showing existing levels of the facility at the end of the reporting period	7
10.0 Annual water balance calculation and interpretation	8
11.0 Reported incidents and complaints summaries	8
12.0 Review of Nuisance Controls	8
13.0 Report on financial provisions made under this license, management and staffing structure of the facility and a programme for public information.	9
14.0 Report on training of staff	10
15.0 Resources and energy consumption	10
16.0 Report on environmental management programme	10

1 INTRODUCTION

- 1.1 This Annual Environmental Report (AER) has been prepared to meet the requirements of Condition 11.5 of Waste Licence 90-1 for Balbane Landfill Site, and includes the information listed in Schedule F of the Licence.
- 1.2 Balbane Landfill Site is located approximately 6.5 km north of Killybegs, in the townland of Balbane, County Donegal. The landfill covers an area of approximately 2.9 hectares. The landfill site was developed to operate on the dilute and disperse principle whereby leachate generated by rainfall was allowed to disperse into the surrounding environment.
- 1.3 Donegal County Council submitted an application to the Environmental Protection Agency for the continued operation of the landfill site, as required by the Waste Management (Licensing) Regulations 1997. On the 13th of November 2001 the Environmental Protection Agency granted the Council a Waste Licence (registration number 90-1) for the facility, in accordance with the Third Schedule of the Waste Management Act, 1996.

2 REPORT PERIOD

- 2.1 The report period for this Annual Environmental Report (AER) is from January to December 2008. The site closed in January 2004.

3 WASTE ACTIVITIES CARRIED OUT AT THE FACILITY

- 3.1 In accordance with Condition 1 of the waste licence only those waste types and quantities of waste listed in Schedule A shall be disposed of at the facility unless the prior agreement of the Agency has been obtained. The maximum annual tonnage of individual waste types for disposal is listed in Schedule A of the Waste Licence at 7,500 tonnes from the date of grant of licence for municipal waste and 70,000 tonnes of inert material of the purpose of restoration.
- 3.2 The licensed waste disposal activities in accordance with the Third Schedule of the waste Management Act, 1996 are restricted to those listed as follows:
 - **Class 1:** Deposit on, in or under land (including landfill).
This activity is limited to deposition of municipal and inert waste.
 - **Class 4:** Surface impoundment, including placement of liquid or sludge discards into pits, ponds or lagoons. This activity is limited to leachate collection and treatment.
 - **Class 13:** Storage prior to submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where the waste concerned is produced. This activity is limited to leachate collection and storage prior to treatment.
- 3.3 When operational, access to site was controlled by the Site Manager. All persons availing of the site had to report to the site office at the time of entering and leaving the landfill site. Access was restricted to those times when staff were on duty and the site is now secured to prevent unauthorised entry.

4 QUANTITY AND COMPOSITION OF WASTE RECEIVED AND DISPOSED OF DURING THE REPORTING PERIOD AND EACH PREVIOUS YEAR.

- 4.1 A temporary computerised weighbridge was installed at the site in 2002 and this was used to record waste data figures until the facility closed in January 2004. No waste has been received at the site since closure. Annual figures for the period 1998-2008 are shown in Table 4.1.

Table 4.1 Waste Quantities Accepted (tonnes)

Waste Types	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008
Municipal Waste (20 03 01)	3228	3716	4721	4107	5069	2790	187	0	0	0	0
Street Cleanings (20 03 03)						57	3	0	0	0	0

5 SUMMARY REPORT ON EMISSIONS, RESULTS AND INTERPRETATION OF ENVIRONMENTAL MONITORING**5.1 ENVIRONMENTAL MONITORING REQUIREMENTS**

The locations, frequencies and parameters which are required to be monitored at Balbane Landfill Site are specified in Schedule F of the Waste Licence. Details of these are shown on Drawing Nos 5234.40 /107 and 5234.40/06 and are given in Appendix A.

5.2 MONITORING RESULTS

Results of monitoring for the period for surface water, groundwater, leachate and gas are contained in tabular and graphical format in Appendix B.

5.3 GROUNDWATER

- 5.3.1 Results are assessed against the Maximum Admissible Concentrations (MAC's) set out in the EC Quality of Water for Human Consumption Regulations 1988, the EC Drinking Water Regulations 2000 and the EPA Interim Report, Towards Setting Guideline Values for the Protection of Groundwater in Ireland. Groundwater locally flows in a south-easterly direction and GW1 reflects baseline conditions upstream of the site. GW4 & GW2 are downstream but in waste. It should be noted that BH2 is also located within waste is considered to be a leachate well.
- 5.3.2 Results from this period indicate that leachate continues to be released from the waste body into the local groundwater environment.

5.4 SURFACE WATER

- 5.4.1 Surface water results are assessed against the Surface Water Quality Standards (SWQS) as laid out in the EC Quality of Surface Water Intended for the Abstraction of Drinking Water Regulations 1989. S1 is upstream of the site, whilst S4 – S7 inclusive are downstream. S2 and S3 were relocated and relabelled at the request of the EPA.
- 5.4.2 Upstream of the waste body results of analysis shows chloride and nitrite levels to be raised above the MAC. Downstream, levels of ammonia are consistently above MAC close to the landfill and reduce gradually further downstream. Other parameters indicative of leachate are also raised relative to the MAC. Downstream results would indicate that leachate continues to be released from the waste body into the local surface water environment and levels are comparable to those recorded during the last reporting period.

5.5 LEACHATE

5.5.1 Leachate quality varies during the lifetime of a landfill depending on the stage of decomposition of waste. Results from BH1, the leachate well are presented in Appendix B. Some characteristic parameters have been compared with those of 'typical' raw leachate in Table 5.1 below.

Table 5.1 Raw Leachate Concentrations 2008

PARAMETER	Balbane Landfill Site		From 30 samples from UK/Irish landfills accepting domestic waste Results in mg/l		
	Min.Conc	Max.Conc	Min.Conc	Max.Conc	Mean
Ammonia (mg/N)	<0.01	15.39	<0.2	1700	491
BOD	3.1	4.2	4.5	>4800	>834
COD	10	57	<10	33,700	3078
Chloride (mg/l)	25	245	27	3410	1256
Iron (mg/l)	0.612	0.612	0.4	664	54.4
Potassium (mg/l)	18.4	18.4	2.7	1480	491
Sodium (mg/l)	139.3	139.3	12	3000	904
TON (mg/l N)	<0.01	0.1	/	/	/
Conductivity (μ S/cm)	1302	1838	503	19,200	7789
pH (pH units)	6.4	6.5	6.4	8.0	7.2

5.5.2 Table 5.1 compares raw leachate concentrations detected at Balbane with 'typical leachate composition from 30 samples from UK/Irish Landfills accepting mainly domestic waste' (taken from EPA Manual for Landfill Operational Practices). Parameters measured all compare well with typical leachate ranges shown and with the results issued last period.

5.6 PERIMETER GAS MONITORING

The gas monitoring piezometers on the site at Balbane are located within waste, and are not perimeter wells. As such results (as contained in Appendix B) are indicative of methanogenic gas processes that would be occurring under anaerobic conditions.

5.7 DUST MONITORING

As previously agreed with the Agency, monitoring of dust ceased as there are currently no operations being undertaken on the site. When any activity commences, such as restoration works for example, a dust-monitoring programme will be resumed.

5.8 METEOROLOGOCAL MONITORING

Meteorological data is contained in Appendix C.

**6 VOLUME OF LEACHATE PRODUCED AND VOLUME OF LEACHATE TRANSPORTED
DISCHARGED OFF SITE**

- 6.1 A water balance calculation has been undertaken and is presented in Appendix C. It estimates that 9734m³ of leachate will have been generated from this waste body during the period. Due to a lack of collection infrastructure there is not currently any leachate transported off site. Correspondingly it is assumed that all leachate generated disperses into the surrounding environment.

**7 REPORT ON DEVELOPMENT WORK UNDERTAKEN DURING THE REPORTING PERIOD,
AND A TIME SCALE FOR THOSE PROPOSED DURING THE COMING YEAR.**

- 7.1 The landfill is currently scheduled for restoration during 2009.

8 REPORT ON RESTORATION OF COMPLETED CELLS / PHASES

- 8.1 The Restoration and Aftercare Plan was submitted to the Agency in October 2004 and approved in November 2004.
- 8.2 Of Donegal County Council's five closed landfill sites Balbane is now scheduled for restoration fourth and next. A request to reprioritise the order of restoration of the last two remaining unrestored closed landfill sites (Churchtown Landfill Site (W0062-1) and Balbane Landfill Site) was submitted to the Agency in December 2008. The current proposed date for restoration of Balbane is 2009.

**9 SITE SURVEY SHOWING EXISTING LEVELS OF THE FACILITY AT THE END OF THE
REPORTING PERIOD**

- 9.1 A topographical survey of the site was last carried out in December 2002. This was included in the 2002 AER.

10 ANNUAL WATER BALANCE CALCULATION AND INTERPRETATION

A water balance calculation has been undertaken and is presented in Appendix C. The calculation for monthly water balance is as follows

$$Lo = [ER(A) + LW + IRCA + ER(I)] - [aW]$$

Where

Lo = leachate produced (m^3)

ER = effective rainfall

A = area of cell (m^3)

LW = liquid waste

IRCA = infiltration through restored areas and capped areas (m)

a = absorptive capacity of waste (m^3/t)

W = weight of waste deposited

I = surface area of lagoons (m^2)

11 REPORTED INCIDENTS AND COMPLAINTS SUMMARIES.

- 11.1 Other than the reporting of on-going emissions exceedances detected in the routine monitoring programme, no incidents occurred during the monitoring period and no complaints were received.

12 REVIEW OF NUISANCE CONTROLS

- 12.1 As the facility is no longer operational, all areas formerly used for the placement of municipal waste have been covered by clay and topsoil. There has been a reduction in the incidence of nuisances resulting from this. However, precautionary measures are employed to ensure the detection and appropriate management of any nuisances that may arise. As part of the Environmental Management System for the site a procedure has been developed to provide for regular inspections of the site as part of the quarterly monitoring programme.

12.2 PEST CONTROL (vermin and flies)

Pest control is undertaken by a contractor on site. ISS lay Rodenticide (Broifacoum) in bait boxes located on site and its effectiveness monitored by checking on a regular basis to assess if bait is taken.

12.3 DUST CONTROL

Dust is principally generated within the site by the trafficking of vehicles along the landfill access. Since the site is now non-operational there is no traffic to generate a dust nuisance. If a problem were identified during the inspection programme then appropriate measures would be taken, but this is considered unlikely. When any activity is occurring on the site in future such as either receipt of restoration materials, and / or restoration works, then more regular inspections (and monitoring of dust levels in line with Licence requirements) will resume. Damping down of dusty areas will accordingly be done as and when necessary.

12.4 LITTER

A litter problem could principally arise from two sources, firstly from illegal dumping, and secondly from exposed areas of waste. Areas of exposure are checked for during the quarterly inspections, and where necessary, the cover is improved. The site is on the regular inspection route of the Litter Warden for the area, and when any problems arise the Warden investigates the incident and clean-up is carried out by the Mobile Litter Unit. If ever necessary litter pickers are deployed inside the landfill.

12.5 BIRDS

In order to prevent birds from scavenging over the landfill, the cover has been improved and seeding carried out across the full surface. Regular inspections check for areas of exposure and monitor for the presence of birds.

12.6 ODOURS

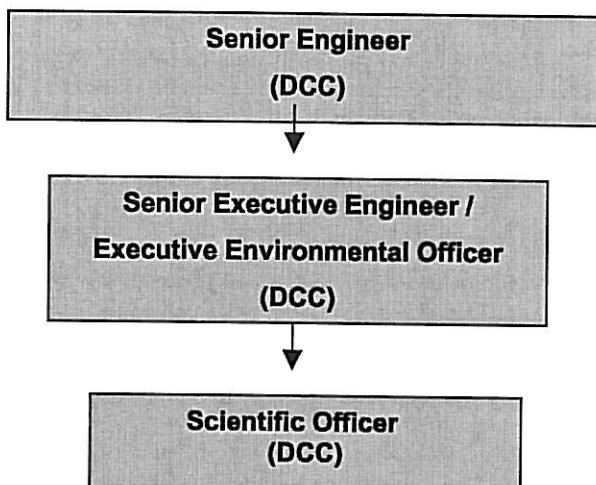

Odours associated with trace aromatics in landfill gases are generally dispersed by prevailing winds.

13 REPORT ON FINANCIAL PROVISIONS MADE UNDER THIS LICENSE, MANAGEMENT AND STAFFING STRUCTURE OF THE FACILITY AND A PROGRAMME FOR PUBLIC INFORMATION

- 13.1 Donegal County Council being a local authority is able to provide the necessary finances to ensure the proper management, development and restoration of Balbane Landfill Site.
- 13.2 Overall responsibility for the ongoing operations and development of the landfill site is held by the Senior Engineer. The Senior Engineer is assisted by a Senior Executive Engineer and an Executive Environmental Officer assigned to the Environment Section of Donegal County Council.
- 13.3 As part of the Environmental Management System (EMS) for the site, a communication programme (in accordance with Condition 2.8 of waste licence) is provided in Section 2 of the

EMS to ensure that members of the public can obtain information concerning the environmental performance of the facility at all reasonable times.

- 13.4 The Management Structure at Balbane Landfill site is set out below.

14 REPORT ON STAFF TRAINING

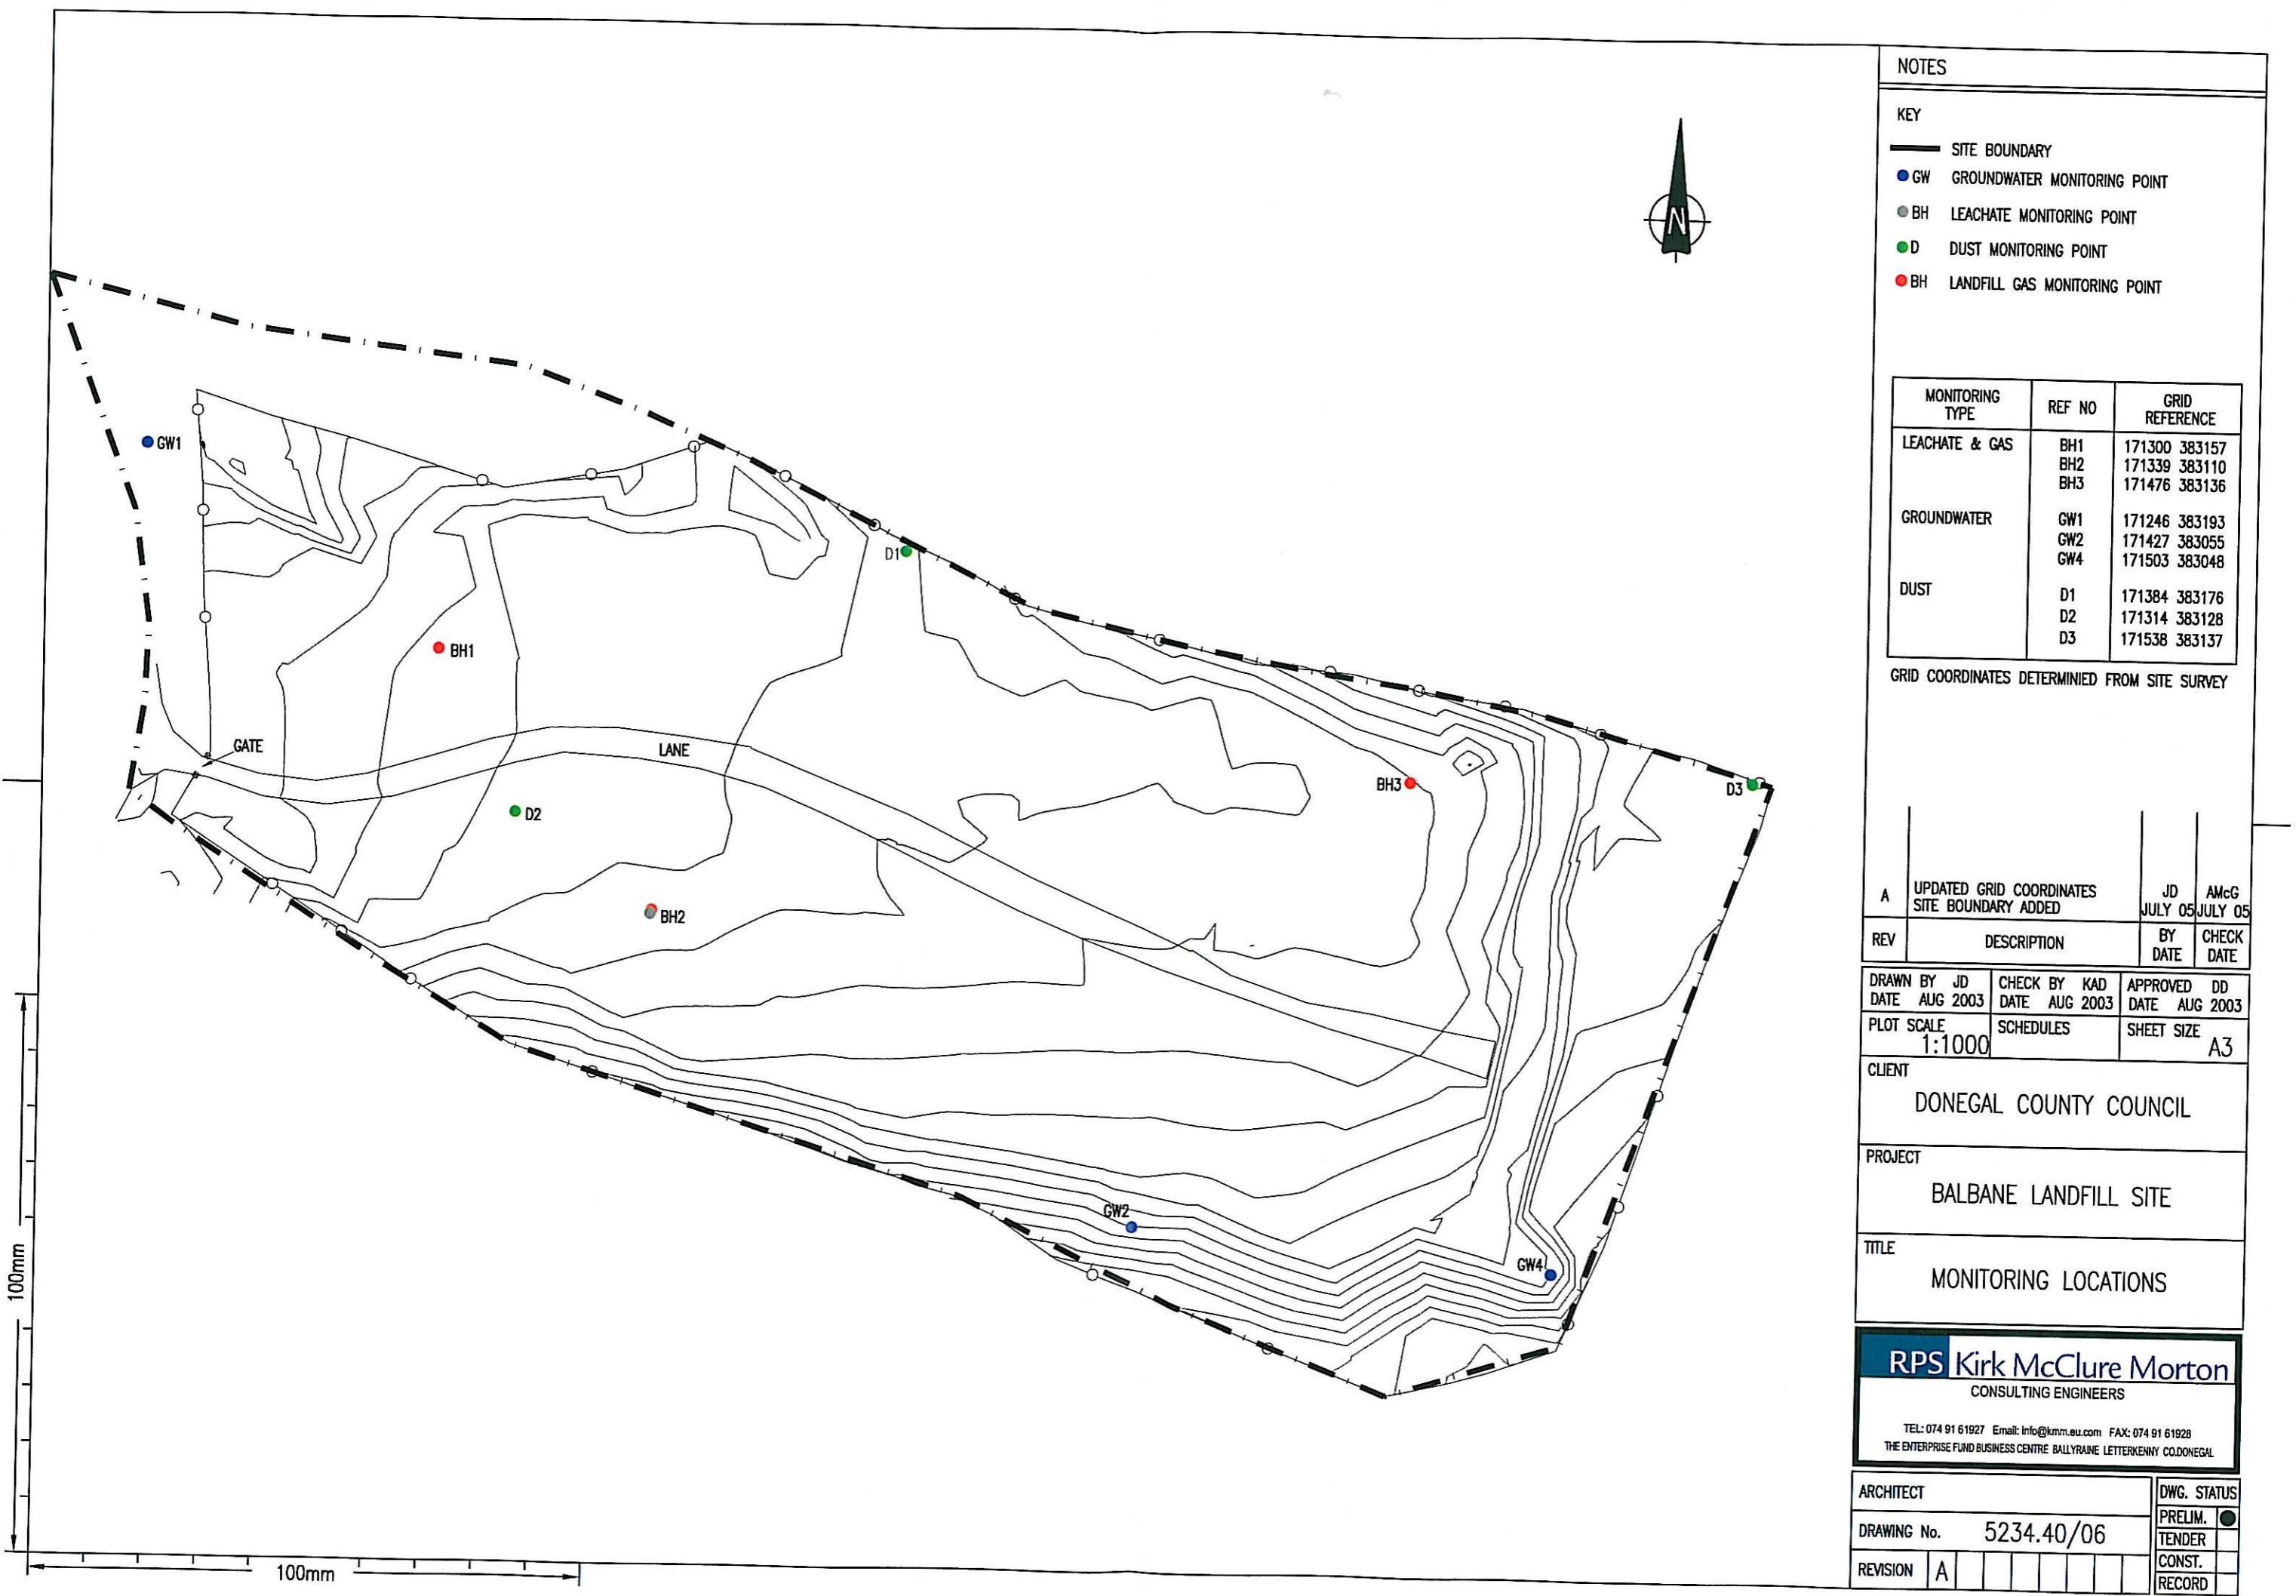

- 14.1 No training has been undertaken as the facility is now closed and there are no operational personnel on the site.

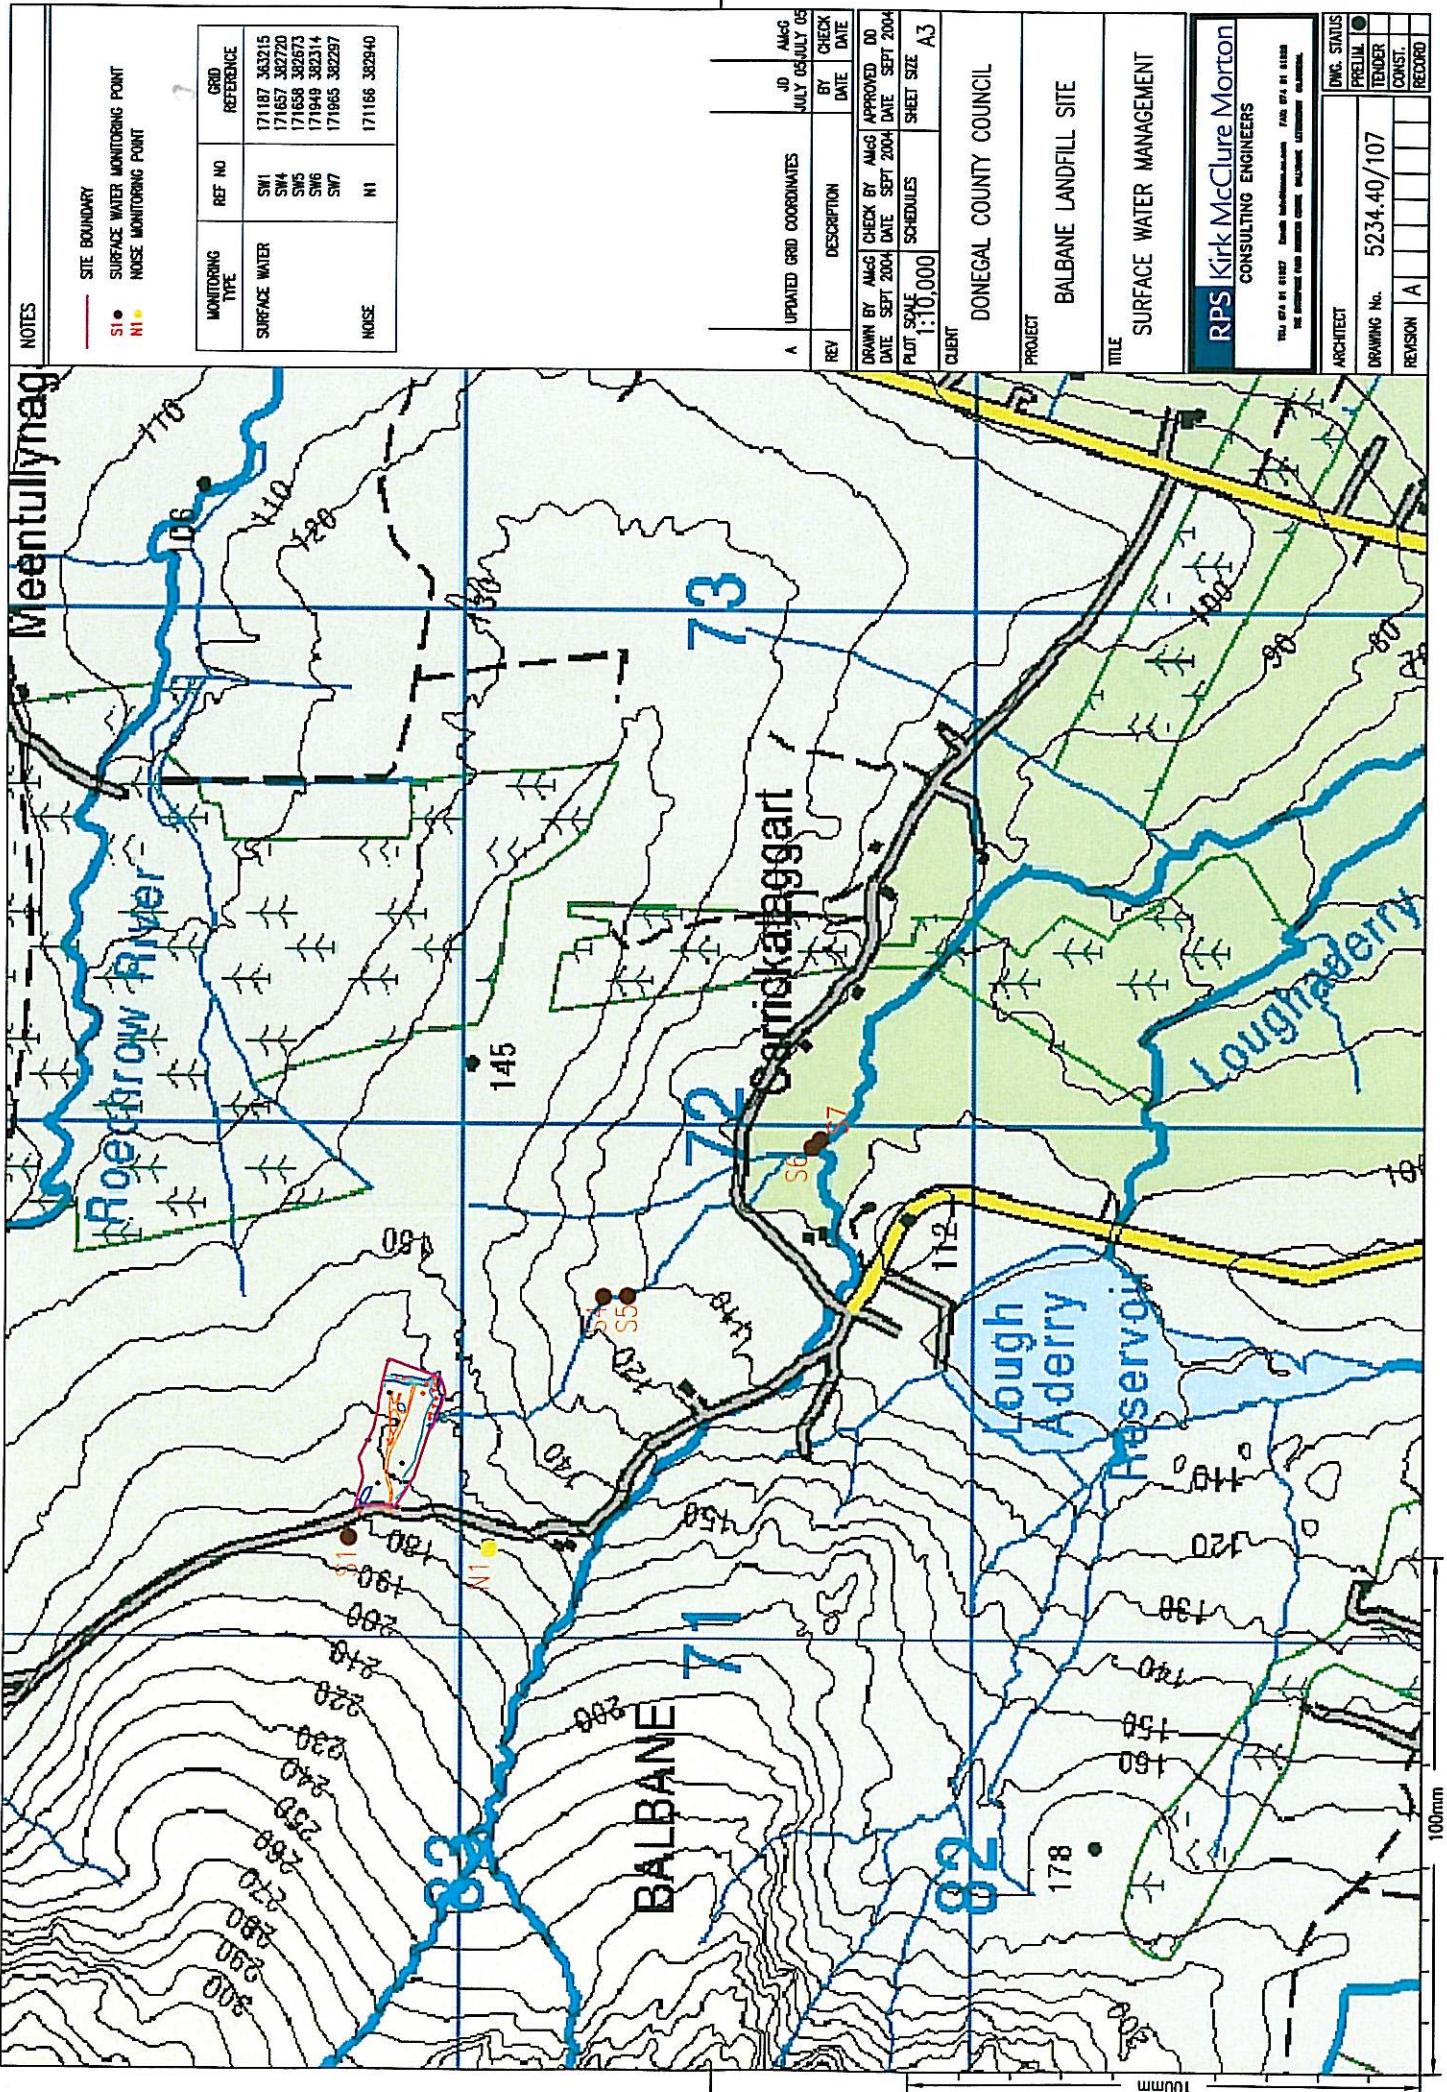

15 RESOURCES AND ENERGY CONSUMPTION SUMMARY

- 15.1 No energy was consumed on the site during the reporting period.

16 REPORT ON ENVIRONMENTAL MANAGEMENT PROGRAMME

- 16.1 An Environmental Management Programme (EMP) was revised in 2004 to take into consideration the closure of the site and was submitted in to the Agency in December 2004 for its agreement. A public communication programme has been initiated in accordance with Condition 2 of the Waste Licence to ensure that information concerning the environmental performance is available at reasonable times. The public may view environmental records at the Donegal County Council headquarters. Details regarding this are contained in Section 2 of the Environmental Management System Manual.
