

Proposals for development involving alterations or additions to a protected structure or its setting will only be permitted where it can be clearly demonstrated that;

- a) Development will be compatible with and will not detract from the special character of the structure and its setting; and
- b) Development will complement and reflect the design and character of contiguous buildings and the surrounding area; and
- c) Features of architectural or historic interest and the historic form and structural integrity of the structure will be retained.

Proposals for development will not be permitted that compromise the setting of protected structure(s) or result in the material alteration or demolition of the structure(s) except where;

- a) The structure is not capable of repair; and
- b) There is no compatible or viable alternative use for the structure.

PROTECTED STRUCTURES OBJECTIVES:

It is an objective to seek the protection of all structures within the town that are of special architectural, historical, archaeological, artistic, cultural, scientific, social or technical interest. Such structures include but are not exclusive to the Record of Protected Structures hereunder.

Record of Protected Structures List

The Record of Protected Structures list is a list of the structures that constitute the Cobh Town Record of Protected Structures. It is contained in Appendix 1. The location of the structures is indicated on Map 5a-5h of the Plan.

All of the Protected Structures listed in the *Cobh Development Plan* (CTC 2005) should be suitably protected (if necessary) during construction works. CH26 incorporates all of the information as detailed in the Cobh Development Plan.

For inspection purposes only
Consent of copyright owner required for any other use.

5. Constraints Inventory, Predicted Impacts & Suggested Mitigation

The constraints inventory below is tabularised as per the NRA published guidelines on constraints studies for both archaeological and architectural heritage (NRA n.d.; NRA n.d.a). All constraints are also shown on relevant mapping provided in this report.

In addition to the published information of the archaeological and architectural heritage of the study area, the constraints inventory below also includes potential archaeological and cultural heritage sites that were identified during the archaeological walkover. *Unrecorded* or 'new' monuments and structures have also been provided here as recorded during the walkover and the analysis of the aerial photo. High resolution digital aerial photos (orthophotos) were examined for the purpose of this archaeological assessment. Nothing of an archaeological nature was noted on the photo. Much of the green field areas for pipelines were inaccessible at the time of writing and only aerial photos were used. The WWTP site was inspected. The red pipelines (along roads) were wind-screen surveyed and portions walked.

For the purposes of the Constraints assessment and this report, the constraints have been allocated a unique code "CH" in order to clearly identify them in the report and the accompanying mapping. All other pertinent codes are provided in the table (for instance RMP numbers, inventory numbers and Protected Structure numbers) in order to aid any cross-referencing that may be required.

5.1 Archaeological Monuments Constraints Inventory (figs 19-23; Table 5)

The following are the archaeological monuments in the vicinity of the study area, which are likely to be impacted by the proposed development. There is a description of each monument as they appear in the *Archaeological Inventory of County Cork- Volume II: East and South Cork* (Power 1994). Where possible these sites were visited in the field. Due to the scale of the development, only those recorded monuments whose ZAP are predicted to be impacted by the development have been included as CH sites. Other pertinent information has been included in the description where available.

Many of the pipes proposed to be positioned through green field locations and in private property. Aerial photos were consulted and where possible were viewed from roads or gateways. Nothing of an archaeological nature was noted on these. However, there remains the potential for archaeological features to be present at a very low above ground register, which may not manifest on aerial photos. There remains the possibility that subsurface unrecorded archaeological remains may be impacted during the positioning of these pipes. To mitigate against this, it is suggested that **ARCHAEOLOGICAL MONITORING** takes place at all of the green field pipe locations.

The WWTP proposed site was inspected and field walked (see above). Nothing new of an archaeological nature was noted as being extant during the inspection. The proposed site is adjacent to two recorded archaeological monuments (CH9 & CH10). It is suggested that this site, due to its scale of the proposed development that the WWTP site be **ARCHAEOLOGICAL TEST TRENCHED** in advance of any development there. It is also proposed (see below) that a suitable buffer zone around CH9 & CH10 be instated, within which no development should be undertaken (this should include pipe routes)..

The recorded archaeological monuments predicted to be impacted by the proposed development are:

Constraint Study Code	Reference Nos	Legal Status	Townland	Monument Type	National Grid Reference	Information Source	Information Detail	Type of Impact Predicted	Suggested Mitigation Measure
CH1 (see CH16 also)	CO087-006-- Inventory 4614	Recorded monument	Rathanker	Ringfort	17590/06740	RMP Inventory	Indicated. In pasture, on south-facing slope. Roughly circular area (35.3m n-s; 32.5m E-W) defined by heavily overgrown earthen bank (H1.85m) SE to SW; low rise elsewhere, with slight depression externally to NW. Break in low rise to NW and E. Possible souterrain (5140) in interior.	Indirect: pipe impacting ZAP of monument	Monitoring of pipeline in vicinity of ZAP for monument
CH2	CO087-013-- Inventory 5193	Recorded monument	Ballywilliam	Holy Well	18127/06719	RMP Inventory	Indicated 'Tubberlaonann' Roadside. Enclosed by rectangular stonewall; roofed with slab. Surrounding area wet; overgrown; no longer in holy use.	Possible inadvertent damage when pipe trench is dug, due to proximity of monument to roadside	Securely fence off during pipe works (remove fencing when project complete). Monitoring of pipeline in vicinity of ZAP for monument
CH3	CO087-024-- Inventory 4973	Recorded monument	Parkgarriff	Ringfort	17599/06616--	RMP Inventory	Indicated. In pasture, on south-facing slope. Shown on 1842 OS map as circular enclosure (diam. c. 40m); as slight curve in NNW-SSE field fence on 1902 and 1934 OS maps. Modern bungalow now occupies site. Field fence (h 1.2m) SW to	None. Monument is no longer extant and obscured by modern construction	Monitoring of pipeline in vicinity of ZAP for monument

Square graveyard, large collection of inscribed headstones, contains ruins of 17 th church. Many headstones have maritime connection. Lusitania mass grave here in SW corner. Site of ancient parish church called Clonmel.	Indirect: pipe impacting ZAP of monument	Monitoring of pipeline in vicinity of ZAP for monument

Table 5. Archaeological constraints inventory of recorded monuments

5.2 Architectural Constraints Inventory (figs 19-23; Table 6)

The following is the list of all known recorded protected structures (RPS) within the study area. (Excepting Cobh Town.) Its elements have been grouped under CH26 see below due to its complexity.) This study's code is provided as well as the RPS county code for the structure. The importance/legal status of the structure is provided along with the name of the address in which the structure is situated. The site type is the classification designated to the structure in the list of Protected Structure in the Cork County Development Plan 2003, (CCC, as varied). The source of the information provided in the table is given, along with the pertinent points of that source in the final column. The National Inventory of Architectural Heritage (NIAH) was contacted. They informed the writer that they have yet to survey the study area and its vicinity and as such have no records for the study area at present (W. Cumming, NIAH pers comm.). It is important to point out that the NIAH's future work may have a bearing on this study. Full details of all sources used are provided in section 7 of this report.

Constraint study code	Reference (RPS County Code)	Address	Location/ Coordinates	Site Type	Source	Importance/ Legal Status	Information Detail	Type of Impact Predicted	Suggested Mitigation Measure

5.3 Further Potential Archaeological & Architectural Constraints (figs 19-23, Table 7)

Some wayside monuments were noted during the inspection of the study area. These are not formally protected. They might be regarded as being of local interest and so it is suggested that they be protected from inadvertent damage during the construction of the development. The potential architectural constraints detailed in the table below have been included here (although they are not recorded structures at present). Potential architectural features were identified from the walkover inspection only. One “new” unrecorded extant archaeological monument was noted during the walkover CH22. While the WWTP site was walked by the writers, the remainder of the green field pipe locations were not accessible at the time of writing (these were accessed on the aerial photos only). No green field pipe location is near an RMP or a PS. However, it is suggested that all these locations, where new pipelines are been constructed in green field areas are **ARCHAEOLOGICALLY MONITORED**.

Constraint study code	Ref. Nos	Address	Location/ Coordinates	Site Type	Source	Importance/ Legal Status	Information Detail	Type of Impact Predicted	Suggested Mitigation Measure
CH20	none	Ringaskiddy	Within study area, 177180/0643 60	Roadside memorial	Fieldwork	none	Memorial for a death near this location.	Direct Impact: May be inadvertently disturbed during construction.	Suitably protected and fenced off (temporarily) during construction works
CH21	none	Ringaskiddy	Within study area, 176970/0646 59	plaque	Fieldwork	none	Cork Harbour Commissioners commemorative plaque erected in 1980 and bearing the inscription 'This plaque acknowledges the assistance of the European Regional Development Fund in the development of the port of Cork. June 1980'. It is a 2.40m high brick structure.	Direct Impact: May be inadvertently disturbed during construction.	Suitably protected and fenced off (temporarily) during construction works

6. Discussion & Overview

It is clear from this study that the landscape that the proposed development is located is rich in cultural heritage elements from the earliest times to the present. Perhaps the most important of those is that of Cobh Town itself CH26. Due to its historic past and its protected structures (which are seen as individual elements) it was decided that in the case of this study it should be seen as a cohesive entity. This ethos is echoed in the town's Development Plan (CTC 2005). Most of the proposed development is underground pipe work, so while it is predicted to be visible when construction is taking place, in the long term, the visual impact should not be permanent. Major pumping stations will have a visual impact, particularly the one proposed for West Beach Cobh. This should be designed sensitively with its central location borne in mind, among all the historic structures. The other stations might also be suitably screened and their construction either/or archaeologically test trenched or monitored. The following is an overview of the results of the study.

Table 8. Summary of Cultural Heritage Constraints

6.2 Other Designations (Fig. 24, Table 9)

This report is primarily concerned with the cultural heritage of the subject site proposed for the scheme. (RMP and PS). However, it is important to note that the study area is variously designated in the County Development Plan 2003. The mapping used dates to April 2006. It was obtained from the Cork County Council website. The other designations of the study area are as follows (correct at the time of writing and not an exhaustive list):

Location in study area	Designation	Code	Cork County Development Plan location (CCC 2006)
R610/N28 (Passage West/ Monkstown/ Ringaskiddy)	Scenic Route	A54	Map 9
R624 (Cobh Road)	Scenic Route	A53	Map 9

Great island, north of Cobh along R624	Scenic Landscape	N/a	Map 9
N and S of Owenboy River, Carrigaline	Scenic Landscape	N/a	Map 15
Owenboy River Estuary	Nature Conservation	PNHA-1990	Map 15
Monkstown Creek	Nature Conservation	PNHA-1979	Map 9
Cuskinny Bay (E of Cobh)	Nature Conservation	PNHA-1987	Map 9
Cork Harbour	Special Protection Area		Section 7.2.8 in <i>Carrigaline Electoral Area Local Area Plan</i> (CCC 2005 and CCC as varied)

Table 9. Other Designations in study area (after CCC 2006 with additions)

Cork County Council also has adopted a county Heritage Plan 2005-2010, (CCC 2005) which has several objectives in relation to heritage in the County. None of the objectives are specific

to the study area, however, these objectives should be borne in mind. It was consulted as part of this study. This Plan is available from www.corkcoco.ie.

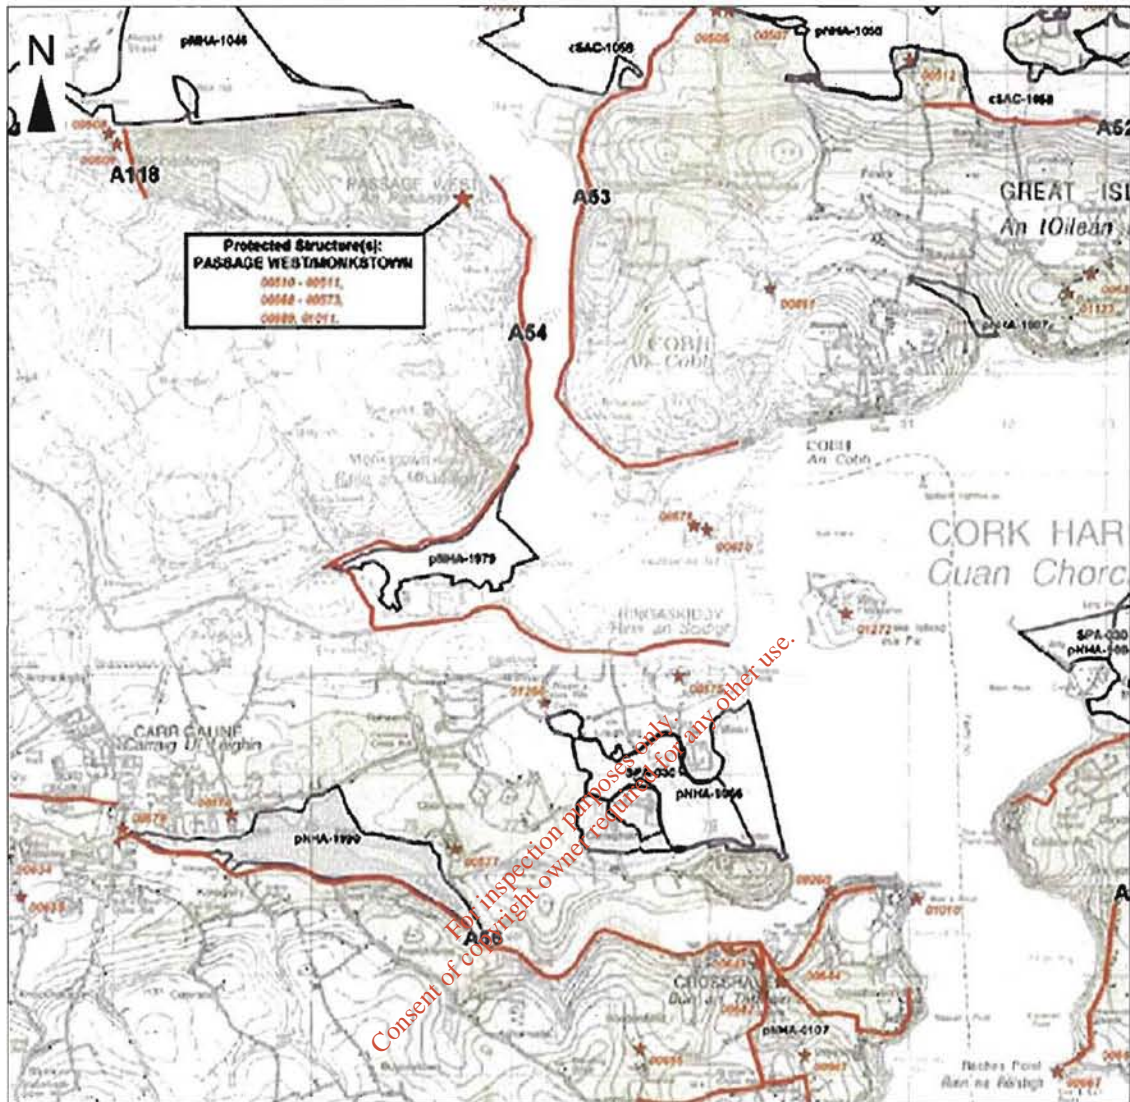

Figure 24. Other designations in study area (after CCC 2006 with additions)

7. Conclusions & Suggested Mitigation Summary

Twenty-seven cultural heritage constraints have been identified as part of this study. Some are archaeological monuments, protected structures or both. One new archaeological monument, a limekiln was noted during the study. The town of Cobh was allocated a cultural heritage number due to its importance within the study area. The cultural heritage features highlight the importance of this locality from prehistory to the present day. Specific mitigation measures have been suggested in section 5 of this report. Underwater/intertidal areas (marked in blue) have been considered separately in the ADCO report in section 10. Further general mitigation measures are provided below.

7.1 Predicted Impacts

7.1.1. "Do-Nothing" Scenario

If nothing is done at the locations described in this report then the extant and possible sub-surface cultural heritage features including archaeology, will remain as they are at present.

7.1.2 "Worst Case" Scenario

If no cultural mitigation measures are put in place it is predicted that it is possible that cultural heritage features including archaeology and artefacts, which may lie sub-surface may be destroyed or damaged without a suitable record being made.

7.1.3 Predicted Impact Scenario

Indirect impacts are predicted for a number of CH sites along the route. This means that the ZAP for a number of recorded sites is predicted to be impacted by the current route of the pipeline. ZAP are indicative zones around a monument only. Visual impact in relation to

pipelines is predicted not to be permanent as they are to be buried. Pumping stations and WWTP are predicted to have permanent visual impacts on a number of CH sites. Suitable screening is suggested in these cases. Specific impact information is detailed for each CH site in tables 5-7 above (column headed "Type of Impact Predicted" in each case) and so is not repeated here. A summary is provided in Table 10.

7.1.4 Predicted Residual Impacts

It is anticipated that in the event of the mitigation measures as detailed in this report being implemented in accordance with the requirements of the National Monuments Section (NMS) and the National Museum of Ireland (NMI) there will be no residual impacts arising from the proposed development.

*For inspection purposes only.
Consent of copyright owner required for any other use.*

7.2 Suggested Mitigation

As detailed above, some indirect impacts are predicted on the cultural heritage of the area. In order to mitigate the predicted impacts, mitigation has been suggested. Each CH site has specific mitigation suggested in tables 5-7 (column headed “Suggested Mitigation Measure”) and so has not been repeated here. Pre-construction archaeological testing has been suggested particularly for the WWTP site and the pumping stations, with varying levels of archaeological monitoring throughout the scheme. Suitable screening is suggested for pumping stations and WWTP to alleviate any negative visual impacts that might occur. The suggested mitigation measures in this report are those which have been used previously on similar projects. However, it is important to note that these mitigation measures are suggestions and that it is the remit of the NMS of the DoEHLG in consultation with the NMI that recommends and ratifies any archaeological mitigation required. As such, those bodies may recommend measures that have not been included here. Table 10 provides a summary of the suggested mitigation for the project.

General predicted impact Summary	Mitigation measure Summary
Predicted impacts on specific CH sites 1-27 detailed in section 5	Refer to section 5 for suggested specific measure
Impact of green field pipe routes on unrecorded subsurface archaeology or cultural heritage	Field walking of ALL green field areas when accessible. Archaeological test trenching and/or monitoring of pipe routes
Impact of WWTP	Archaeological testing in advance of construction
Impact of pipe routes where it cuts boundaries such as barony/townland boundaries	Archaeological test trenching of locations where this occurs
Impact of pipe routes within zones for CH sites	Archaeological monitoring of these locations
Impact of pipe routes along roads outside zones for CH sites	Archaeological Inspections of works at these locations
Impact of major pumping station locations: Monkstown, Raffeen/Strawhill, West Beach and Carrigaloe	Archaeological testing and/or monitoring of these locations
Visual Impact of pipeline routes	Suitable screening during construction especially in CH26
Visual Impact of major pumping stations	Suitable screening to minimise visual impact on cultural heritage. In particular, sensitive design of West Beach pumping station in line with provisions of Cobh Development Plan (CTC 2005), due to its highly visible location with the cultural heritage town of Cobh.
Predicted Impacts on underwater and intertidal zones (as indicated by blue lines on mapping)	Refer to specific measures as set out in ADCO report section 10 of this report.
Scale of proposed development	Due to scale of proposed development it is suggested that a Project Archaeologist be appointed to the project to oversee and manage its cultural heritage dimension during construction by liaising directly with main contractor (as has been done in similar projects previously)

Table 10. Mitigation Summary

7.3 Non-Technical Summary

7.3.1 Scope of Study

This is a desk based and fieldwork study to assess the potential impact of the proposed development on the potential archaeological and cultural heritage significance of the site. Aegis Archaeology Limited undertook the terrestrial dimension of the study and ADCO Limited was contracted to undertake the underwater and intertidal dimension.

7.3.2 Method of Study

The site was visited on three occasions by two qualified archaeologists and recorded in the proper fashion (as per published guidelines in the compilation of EIS). A desk based study was undertaken which consulted all immediately available material relating to the site, including review of archaeological works, National Museum files, archaeological information held and published by the Archaeological Survey of Ireland, Cork County Development Plans, national Inventory of Architectural Heritage was contacted, though this body has yet to undertake fieldwork at this location (their future work may have a bearing on this project presently), local histories, mapping and aerial photos.

An underwater and intertidal archaeological survey of two pipeline impact corridors was undertaken. Systematic visual inspection of the sub-tidal seabed and intertidal/ foreshore areas surrounding the proposed impacts did not reveal any material or features of archaeological significance. The work was carried out under licence from the DEHLG.

7.3.3 Existing Environment

The environment at present is a mixture of landscapes which include roadways in urban centres, roadways in countryside, green field locations, intertidal and underwater locations. For the purposes of the study the area was subdivided into five areas which were assessed in turn. They are: Passage West, Monkstown, Raffeen/Strawhill; Carrigaline; Shanbally (WWTP); Ringaskiddy and Cobh and environs. The underwater and intertidal dimension was undertaken by ADCO and is detailed in their report (section 10 of this report).

Twenty-seven cultural heritage constraints have been identified as part of this study. Some are archaeological monuments, protected structures or both. One new archaeological monument, a limekiln was noted during the study. The town of Cobh was allocated a cultural heritage number due to its importance within the study area. The cultural heritage features highlight the importance of this locality from prehistory to the present day.

The underwater assessment was undertaken along the works corridor identified for the proposed marine pipeline, crossing between Monkstown and Cobh (River Lee Estuary), and the inter-tidal survey was carried out across the route of the proposed foreshore pipeline at Carrigaline (north side of Owenboy River).

7.3.4 Impacts of the Proposed Development

The landscape is rich in cultural heritage elements from the earliest times to the present. Perhaps the most important of those is that of Cobh Town itself. Due to its historic past and its protected structures (which are seen as individual elements) it was decided that in the case of this study it should be seen as a cohesive entity. It is important to note that the National Inventory of Architectural Heritage have yet to undertake fieldwork in this area and it is likely that their work will produce further protected structures, which may have a bearing on this project. This "entity" ethos is echoed in the town's Development Plan. Most of the proposed development is underground pipe work, so while it is predicted to be visible when construction is taking place, in the long term, the visual impact should not be permanent.

Major pumping stations will have a visual impact, particularly the one proposed for West Beach Cobh. This should be designed sensitively with its central location borne in mind, among all the historic structures. The other stations might also be suitably screened and their construction either/or archaeologically test trenched or monitored.

A number of archaeological sites are located in the region however no archaeological sites are predicted to be directly impacted by the proposed development site. The WWTP site has a ring-fort monument located northeast of the site, with a possible second, further eastwards. The buffer zones around these sites should be respected and pipe work should be outside these areas.

There are no documented occurrences of any archaeologically significant items or sites on the proposed development site. However, it is possible that features and artefacts of interest may be unearthed during the construction works. The loss of such artefacts would be a significant impact.

It is anticipated that in the event of the mitigation measures as detailed in this report being implemented in accordance with the requirements of the National Monuments Section (NMS) and the National Museum of Ireland (NMI) there will be no residual impacts arising from the proposed development.

7.3.5 Conclusions and Suggested Mitigation

The subject site is within an area rich in cultural heritage and archaeology. Ground disturbance works associated with the construction of the proposed development may have an impact on the western portion of the enclosure, adjacent to the site boundary of the WWTP site. In order to be proactive, Archaeological testing works are suggested at the WWTP site and pumping stations locations in order to undertake some archaeological works at pre-construction stage. Pipe locations along roads may reveal features of archaeological interest. As such, monitoring by a fully qualified archaeologist is recommended, to reduce potential impacts.

It is recommended that archaeological monitoring of riverbed/ seabed disturbances during construction be undertaken, with the proviso to resolve fully any archaeological material observed at that point. Archaeological Monitoring of the proposed foreshore pipeline is not deemed necessary.

Several methods of archaeological mitigation have been suggested here, as has been used in similar projects. It is the remit of the National Monuments Section of the Dept of the Environment, Heritage and Local Government, to legally recommend any one or a combination of these mitigation measures and perhaps to make recommendations that have not been suggested above (sometimes through the local authority).

SUMMARY

The Archaeological Diving Company Ltd. was appointed by Aegis Archaeology Ltd, on behalf of Mott Macdonald Pettit (consulting engineers for Cork County Council), to undertake an underwater and intertidal archaeological survey of two pipeline impact corridors as part of the Environmental Impact Assessment for the proposed Cork Harbour Lower Drainage Scheme: the underwater assessment was undertaken along the works corridor identified for the proposed marine pipeline, crossing between Monkstown and Cobh (River Lee Estuary), and the inter-tidal survey was carried out across the route of the proposed foreshore pipeline at Carrigaline (north side of Owenduff River).

Systematic visual inspection of the sub-tidal seabed and intertidal/ foreshore areas surrounding the proposed impacts did not reveal any material or features of archaeological significance. The work was carried out under licence from the DoEHLG, 07D0030 and 07R0135, on 24th and 25th September 2007. It is recommended that archaeological monitoring of riverbed/ seabed disturbances during construction be undertaken, with the proviso to resolve fully any archaeological material observed at that point. Archaeological Monitoring of the proposed foreshore pipeline is not deemed necessary.

1.0 INTRODUCTION

The Archaeological Diving Company Ltd (ADCO) was appointed by Aegis archaeology Ltd., on behalf of Mott MacDonald Pettit (consulting engineers for Cork County Council) to undertake a non-disturbance archaeological assessment of two proposed pipeline impact areas as part of the Cork Harbour Lower Drainage Scheme (Figure 1). The assessment was commissioned as part of the Environmental Impact Assessment to be undertaken prior to the drainage scheme commencing. ADCO carried out an underwater dive assessment, including metal-detection survey, across the River Lee at Monkstown (c.390m wide crossing-point) and field-walking of the intertidal section of the proposed pipeline route (c.2.4km long corridor, Owenduff River near Carrigaline).

The archaeological surveys sought to identify and record the location, nature and dimensions of any archaeological features, fabric or artefacts that may be impacted by the proposed development. Assessment was concentrated within the immediate impact areas, although a sizeable buffer zone was incorporated into each assessment; significantly extending the survey area either side of the proposed seabed/ foreshore impacts.

The assessment was carried out on 24th and 25th September 2007 by a team of three maritime archaeologists, under licence from DoEHLG, licences: 07D0030, 07R0135.

The following report addresses the known and potential archaeological environment; assesses the actual and proposed impacts on that environment from the works programme; and makes recommendations to resolve any further archaeological requirements during/ following the works programme.

2.0 PROPOSED DEVELOPMENT¹

It is proposed to construct a new Waste Water Treatment Plant and Sludge Treatment Centre on a greenfield site, located east of Carrigaline, and to expand/ upgrade the existing waste-water drainage network. The proposed development will facilitate storm water run-off and sewage collection from the population centres of

¹ The following relates to project information provided by Mott MacDonald Pettit Ltd. and does not relate to specific engineering details; only an indicative project design has been provided for the purposes of assessing the potential impacts arising from the project.
