Subject: RE: EPA query on Powerstown landfill

I would estimate that the figure is 383,000 cubic metres.

Pat, thats great. Thanks for that. However, I forgot to stipulate that we needed the figures in cubic meters. Could you do qucik conversion for me based on your knowledge of waste types there and an estimate of waste density?

Apologies for that. A figure by the end of play today would be great.

Thanks again.

Michael.

We do not have an exact record of when the cells were filled but based on an examination of the AER files available I would estimate the following:

The original licence was issued in March 2000 and since that time a total of 179,000 tonnes were landfilled in cells 9-13. To date a total of 105,000 tonnes have been filled in cells 15-16 out of a total of 240,000.

Therefore a total of 419,000 tonnes will be filled from the time of authorisation (March 2000) to the closure of the landfill.

Subject: EPA query on Powerstown landfill

Hello Pat,

I am following up on a query that was sent to Carlow County Council by way of a notice under Article 16(3)(a)(i) of the Waste Management licensing regulations. A reply to our original query was received from Ms Fiona O'Neill on the 11/08/09.

We are seeking a figure for the total amount waste that will be deposited at Powerstown landfill from the time that authorisation first began (which includes deposition since time of receipt of first licence) to the estimated closure of the landfill. A number of figures were supplied by Fiona in her response and I am seeking some clarification on them to ensure that I understand them fully.

I would appreciate it if you could contact me at the number below. As time is somewhat critical on the matter, I would very much appreciate it if you could contact me as soon as possible.

Many thanks,

Michael.
