Subject: Waste Licence Application W0263-01 Irish Packaging Recycling Ltd

Suzanne,

I refer to your request for clarification on the information included in the Article 14 Submission. This is set out herein:

Proposed Drainage Measures;

MSW will only be off loaded and processed in the building shown on Figure 1, which was included in the Article 14 response submitted on 28th August 2009 and a copy of which is attached for your information. Given the nature of the wastes, it will be necessary on occasion to wash down the floor where the wastes are processed and stored.

At present there are no internal floor drains. It is proposed to install a collection drain in the floor along the internal walls of the building. The drain will connect to a 22m³ storage tank in which the washwater will be stored pending removal off site for treatment in a wastewater treatment plant. A schematic showing the proposed position of the floor drain is attached (Figure A).

The installation of the drains and the storage tank is considered to be categorised as Specified Engineering Works. The proposed layout and design of the drains; location and construction details of the storage tank, and details of the wastewater treatment plant(s) that will be used will be submitted to the Agency for approval before any works are carried out. MSW will not be accepted at the facility until the drainage system, which has been approved by the Agency, has been installed.

Waste Accepted in 2009

Details of the wastes accepted at the facility from 2006 to August 2009 were included in the Article 14 Response. Below is a revised table showing the wastes accepted to 30th November 2009.

Table 1 – Tonnage Accepted at the facility

Year	Tonnage Accepted
2006	c. 119,000

2007 (Jan – Aug)	78,000
2007 (during takeover)	44,624.50
2008	100,577.43
2009 (to 30 th November)	61,038

MSW On-Site Retention Time:

The majority of the MSW will be transferred off-site on the day it is accepted. It is likely that some MSW will have to be stored overnight, depending on the time it arrives at the facility and the operational hours of the end destination facilities. However, such wastes will normally be transferred in the early part of the working day, so the overwhelming majority of the MSW will be consigned from the site within 24 hours of acceptance.

There may be occasions, such as bank holidays, where all of the MSW cannot be consigned within 24 hours as the end destinations may not be open, for example residual waste landfills. In such instances priority will be given to consigning the MSW as early as possible on the day following the bank holiday.

I trust the above addresses all your queries, but if you need any further information please let me know.

Regards,

Jim O'Callaghan

Green Line = 5 foot "Push-wall" to be constructed within the existing building.

Red Dotted Line = Drainage system to collect floor washdown/contaminated run-off water will be diverted to 22,000 Litre holding tank. This will then be transported off-site to a licenced waste water treatment plant
