re: Notice in accordance with Article 14(2)(b)(ii) of the Waste Management (Licensing) Regulations

24th February 2010

W0079-02

Dear Mr Dowling,

I am to refer to the above referenced application for a waste licence relating to a facility at Unit 41, Cookstown Industrial Estate, Tallaght, Dublin 24. Having examined the documentation submitted, I am to advise that the Agency is of the view that the documentation does not comply with Article 12 of the Waste Management (Licensing) Regulations.

You are therefore requested, in accordance with Article 14(2)(b)(ii) of the regulations, to take the steps and supply the information detailed below:

ARTICLE 12 COMPLIANCE REQUIREMENTS

1. In Section B.1 provide the name and address of the lessee(s) of the land, buildings and ancillary plant at the facility. Provide the dimensions of the buildings and the site area.
2. Submit details on the number of staff currently employed and proposed to be employed.
3. In Sections E, F, G, H and I complete all relevant tables in Annex 1 of the waste licence application form. Provide data for all emission points.
4. Provide the total waste tonnage accepted at the facility in 2009. Provide details on the waste types proposed to be accepted at the facility and their approximate quantities (including ferrous metal, non-ferrous metal, wastes from electrical and electronic equipment, spent catalysts, glass waste, etc.).
5. Complete Table H.1 (i) and H.1(ii) regarding waste recovery/disposal for all waste types; include the EWC codes and reuse, recovery and/or disposal routes of each waste type.
6. Provide a copy of the most recent planning permission for the facility including conditions.

7. If waste is proposed to be accepted directly from customers provide details on the waste types to be accepted and the estimated quantities. Provide details of access, acceptance procedures, waste handling, processing and storage.
8. Provide a copy of any waste collection permits currently held by Midland Scrap Metal Limited. Provide details of waste collection including the number of skips and waste vehicles operating from the facility.
9. Provide details of the relationship between the licensee (Greenstar Limited) and the day to day operator (Midland Scrap Metal Limited). Provide a description of the waste management experience of Midland Scrap Metal Limited.
10. Submit numbered fully labeled scaled drawings showing the following:
 - Site layout, buildings and external areas;
 - Internal layout of buildings;
 - Storage areas (internal and external) for raw materials and wastes, including skips;
 - External processing areas for metals;
 - Location of waste accepted from householders;
 - Storage areas for end-of-life vehicles prior to and following depollution;
 - Locations of all fuel and chemical storage areas and location of all bunded areas;
 - Location of spill kits;
 - Amended location of noise sensitive receptors.
11. Provide details of facility security, including whether there is CCTV in place.
12. Provide details of the foul and storm water drainage system on site.
 - Resubmit the drainage map of the site, which clearly indicates foul and surface water drainage, silt traps, interceptors and where drains or channels are no longer in place. Indicate the 'part of the site near the southern boundary' referred to as draining to the surface water system.
 - Propose an alternative location for surface water monitoring (SW-1) as close as possible to the site boundary, indicate its location on the drainage drawing and provide its grid reference.
 - Provide the route from the surface water drainage system to the receiving waters (including a suitably scaled map).
 - Provide an assessment of the impact of emissions on the receiving environment prior to diversion of surface water emissions to sewer.
13. Provide design specifications for any oil separators and silt traps on-site.
14. Noise emissions
 - Give particulars of the source, location, nature, level, and the period or periods during which the noise emissions are made for the current activities.
 - Provide details of noise attenuation and control measures currently employed.
 - Taking into account developments in the vicinity of the site, provide an up to date assessment of the nearest noise sensitive locations (NSLs) to the site, stating their distance from the site boundary. Show the NSLs on a map with their grid references. Assign new reference points where necessary.

- For the current activities (including processing of metals outdoors) carry out an assessment of the impact on the noise sensitive locations. Provide details of mitigation measures where relevant.
15. Provide dust monitoring results for October to December 2009. Provide monitoring results for the emission to sewer for 2009.
16. Supply further details on acceptance and processing of end of life vehicles (ELVs).
- Clarify the source of ELVs;
 - Provide details of ELV storage (location and capacity) prior to and following depollution;
 - Provide details of the storage of the depolluted parts including oil contaminated parts, glass, tyres, batteries, plastic components, and metals.
 - Provide details of the drainage infrastructure in the depollution area. Include provision for spillage collection, decanting and degreasing.
 - Provide details of the management of refrigerants.
 - Provide an estimate of quantities of residual fuel, lubricants, brake fluid, antifreeze, batteries and tyres generated and the destination of each (See Table H.1.)
 - Outline any potential noise impacts due to air bag deployment.
17. For the most recent year available provide the water use (m³/day), oxyacetylene use and other fuels not already provided in the application. Clarify if the use of resources is likely to change for the proposed activities.
18. Provide details of all boilers on site, including thermal input, location, fuel type and use.

Your reply to this notice should include a revised non-technical summary which reflects the information you supply in compliance with the notice, insofar as that information impinges on the non-technical summary.

In the case where any drawings already submitted are subject to revision consequent on this request, a revised drawing should be prepared in each case. It is not sufficient to annotate the original drawing with a textual correction. Where such revised drawings are submitted, provide a list of drawing titles, drawing numbers and revision status, which correlates the revised drawings with the superseded versions.

Please supply the information in the form of a one (1) original plus one (1) copy in hardcopy format within **four weeks** of the date of this notice. In addition please submit two (2) copies of the requested information in electronic searchable PDF format on a CD-ROM to the Agency. Please note that all maps/drawings should not exceed A3 in size.

Please note that the application's register number is **W0079-02**. Please direct all correspondence in relation to this matter to Administration, *Licensing Unit, Office of Climate, Licensing & Resource Use, Environmental Protection Agency, Headquarters, PO Box 3000, Johnstown Castle Estate, County Wexford* quoting the register number.

Yours sincerely,

Marian Doyle
Inspector
Office of Climate, Licensing & Resource Use
