

Annual Environmental Report

DRUMABODEN LANDFILL SITE (Waste Licence Ref. W0063-1)

**By
Donegal County Council
For
Environmental Protection Agency**

Reporting Period: January 2009 to December 2009

March 2010

TABLE OF CONTENTS

	<u>Page No.</u>
1.0 Introduction	3
2.0 Waste activities carried out at the facility	4
3.0 Quantity and composition of waste received and disposed of during the reporting period and each previous year.	4
4.0 Summary report on emissions	5
5.0 Summary of results and interpretations of environmental monitoring, including plans and any update of all monitoring locations.	6
6.0 Volume of leachate produced and volume of leachate transported / discharged off site	9
7.0 Reported incidents and complaints summaries	9
8.0 Review of nuisance controls	10
9.0 Management structure of site	10
10.0 Programme for public information	11
11.0 Capping and restoration of the site	11
12.0 Report on development work undertaken during the reporting period and a timescale for those proposed during the coming year.	11

1. INTRODUCTION

1.1 This Annual Environmental Report (AER) has been prepared to meet the requirements of Condition 2.4 of Waste Licence W0063-1 for Drumaboden Landfill and includes the information listed in Schedule A of the Waste Licence. This report provides an environmental review of the site from January 2009 to December 2009.

1.2 Waste Licence Requirements

Donegal County Council ceased operational activity at Drumaboden in April 1999. On the 29th of June 2001 the Environmental Protection Agency granted the Council a Waste Licence (registration number W0063-1) for the orderly closure, capping and restoration of the landfill facility, in accordance with the Third Schedule of the Waste Management Act, 1996. Donegal County Council was only permitted to accept inert waste at the facility for the purpose of restoration and aftercare of the site. The quantity of inert waste to be accepted was limited to 40,000 tonnes. The Licence requires the Council to manage the facility to ensure that activities do not cause environmental pollution and carry out regular environmental monitoring and submit all monitoring results and reports.

1.3 Nature of the Facility

Drumaboden Landfill is an unlined landfill, historically operated on the 'dilute and disperse' principle, whereby leachate generated by rainfall infiltration and the decomposition of the landfilled wastes is allowed to disperse into the surrounding environment. The landfill is situated on blanket bog and is bounded to the north by the River Leannon and to the south by the R249. A peripheral leachate cut-off drain has been provided to intercept seepage of leachate from the landfill mass. The leachate is then pumped from the cut-off drain into a leachate treatment system (puraflo). The facility was fully restored during 2007.

2. WASTE ACTIVITIES CARRIED OUT AT THE FACILITY

2.1 Type of Waste

The licensed disposal activities, in accordance with the Third Schedule of the Waste Management Act, 1996 are restricted to those listed as follows

- **Class 1 Deposit on, in or under land (including landfill):** This activity is limited to the disposal of inert waste only and leachate treatment at the facility.
- **Class 13 Storage prior to submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where the waste concerned is produced:** This activity is limited to leachate collection and storage prior to treatment.

3. QUANTITIES AND COMPOSITION OF WASTE

3.1 Quantities of Waste for Restoration

In accordance with Condition 1 of the waste licence only inert waste shall be accepted for the purposes of remediation, rehabilitation, enhancement and restoration of the facility. The maximum total of inert waste to be disposed of at the site is 40,000 tonnes. The quantities of waste received during previous years at the facility are presented in Table 3.1.

3.2 The total capacity of Drumaboden landfill is 128,000 tonnes and this amount of waste has already been landfilled. The site is closed and no more waste will be accepted.

3.3 Restoration of the landfill was carried out during this period and the quantity of inert material imported is shown in the following table.

Table 3.1 Waste quantities accepted (tonnes)

Waste Types	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009
Total	5596	1515	0	0	0	0	0	0	0	85,716	0	0

4. SUMMARY REPORT OF EMISSIONS

4.1 Introduction

The following is a general description of the results of monitoring for each media type with regard to the extent of emissions. Detailed results of monitoring are presented in Appendix A.

Due to flooding problems throughout the second part of the year surface water sampling locations were inaccessible. This was communicated to the EPA.

4.2 Groundwater

The two upstream wells are GW1 & GW5. GW1 again shows signs of contamination whereas GW5 is virtually clear of contamination. Downstream both wells (GW6 & 7) show signs of low-level contamination from parameters that would be indicative of leachate. Overall levels are similar in scale to those reported during the last period indicating that contamination from the waste body is entering the immediate groundwater environment. NB - all groundwater wells are located close to the waste body.

4.3 Surface Water

The only instances of surface water quality above MAC are upstream of the facility. The River Leannon has good assimilative capacity and this combined with the Puraflo system treating leachate on the site suggests that generally the landfill is not having a negative impact on the surface water environment in terms of leachate emissions. Results are a slight improvement of those of the last reporting period.

4.4 Leachate

Leachate is collected via a cut-off channel and pumped into a Puraflo treatment system. The Puraflo system (which is marketed in Ireland by Bord na Mona) is a package system containing peat media that filters the leachate. Leachate is monitored at the intake and discharge points and the results are contained in Tables 5.1 & 5.2, & Appendix A. The results show that the discharge effluent exceeded parameter limits for ammonia at the start of the period but was back within limits by the end of the period (ELV as stated in the Waste Licence). Maintenance works are currently underway on the puraflo system and it is hoped that performance will improve further.

4.5 Landfill Gas

Passive gas vents allow landfill gas to disperse to the atmosphere at Drumaboden. In addition to the vents, gas monitoring wells have been installed both within waste in the body of the landfill (LG1,2,3&5), and as peripheral wells on the road verge outside the landfill (LG6,7&8). The wells within waste show levels of methane from 0.1% to 51.1%; and CO₂ from 0.6% to 43.1%. The peripheral wells show exceedances for both methane (at LG7) and CO₂ (at LG6 & LG7).

4.6 Dust

Dust monitoring was not undertaken at the site prior to restoration due to the absence of operational activity. Monitoring plans were in place as required during the restoration contract. This monitoring programme was not deployed. Since restoration dust levels are inspected during monitoring and a management system can be deployed if required.

5. RESULTS & INTERPRETATIONS OF MONITORING INCLUDING PLANS & UPDATES OF MONITORING LOCATIONS.**5.1 Monitoring Locations, Parameters and Frequencies**

Monitoring locations are shown on drawing numbers 5234.60/103 & /06. Also contained on these drawings are the location coordinates for each monitoring point (where available). The required parameters to be monitored and frequencies are listed in Schedule D5 of the Waste Licence. All results from the monitoring programme are contained in Appendix A together with graphical representations of key parameters.

5.2. Groundwater

Groundwater is monitored at locations GW1, GW5, GW6, GW7 (refer to drg. no. 5234.60/06). GW1 and GW5 are representative of groundwater upstream of the landfill and GW6 and GW7 are representative of downstream conditions, although all wells are close to the waste body. Wells labelled GW2, GW3 and GW4 are located within waste and are only used to monitor groundwater / leachate levels.

Results from monitoring of these wells are contained in graphical and tabular format. These results have been compared to EC Quality of Water Intended for Human Consumption Regulations, 1988, the European communities (Drinking Water) Regulations, 2000 and the EPA Interim Report, Towards Setting Guidelines Values for the Protection of Groundwater in Ireland. The majority of the parameters measured were below the MAC's.

At all locations except GW1, ammoniacal nitrogen was found to be in excess of recommended limits, with the highest levels present in GW7 with 7.31mg/l recorded.

Levels in excess of recommended limits were also recorded for chloride, iron, manganese, barium and nutrients upstream both upstream and downstream.

5.3 Surface Water

Surface water is monitored at locations SW1, SW2, SW4, SW5 & SW6. SW1 is located upstream of the landfill, with SW2, SW4, SW5 & SW6 being downstream. Condition 9 and Schedule D of the licence requires the licensee to monitor surface water at six locations in the

vicinity of the site on a quarterly and annual basis. Monitoring point S3 as indicated in the licence is no longer monitored as the Puraflo treatment system does not discharge at this point.

These results have been compared to EC (Quality of Surface Water Intended for the Abstraction of Drinking Water) Regulations, 1989. The majority of the parameters have been below the recommended limits (Surface Water Quality Standards, (SWQS)) for A1 category surface water.

Ammoniacal Nitrogen levels were all below MAC.

The only instance of exceedance of MAC was at the upstream location SW1 where COD and BOD were in excess of the limits.

Due to flooding problems throughout the second part of the year surface water sampling locations were inaccessible. This was communicated to the EPA.

5.4 Leachate

Leachate quality can vary during the lifetime of a landfill site depending on the phase of decomposition of the waste. Leachate results and graphs for the reporting period are presented in Appendix A and some of the characteristic parameters of the leachate are listed in Table 5.1 below. Table 5.2 illustrates the maximum and minimum concentrations for both Raw and Treated Leachate.

Table 5.1: Raw Leachate Concentrations 2009

PARAMETER	Drumaboden Landfill Site		From 30 samples from UK/Irish landfills accepting domestic waste Results in mg/l		
	Min.Conc	Max.Conc	Min.Conc	Max.Conc	Mean
Ammonia (mg/N)	17.91	55.75	<0.2	1700	491
BOD	0.30	4.10	4.5	>4800	>834
COD	22	66	<10	33,700	3078
Chloride (mg/l)	71	89	27	3410	1256
Iron (mg/l)	-	<0.000019	0.4	664	54.4
Potassium (mg/l)	-	27.60	2.7	1480	491
TON (mg/l N)	<0.01	5.15	/	/	/
Conductivity (mS/cm)	885	2019	503	19,200	7789
pH	6.59	8.05	6.4	8	7.2

Table 5.2: Leachate Concentrations Comparison 2009

PARAMETER	Raw Leachate		Treated Leachate	
	Min.Conc	Max.Conc	Min.Conc	Max.Conc
Ammonia (mg/N)	17.91	55.75	16.27	44.50
BOD (mg/l)	0.3	4.10	<0.01	4.50
COD (mg/l)	22	66	14	96
Chloride (mg/l)	71	89	92	95
TON (mg/l N)	<0.01	5.15	0.38	8.40
Conductivity (mS/cm)	885	2019	913	1976
pH	6.59	8.05	6.98	8.02

Raw leachate parameters have been compared to "Typical Leachate Composition of 30 Samples from UK/Irish Landfills accepting mainly Domestic Waste" (Landfill Operational Practices). All parameters are consistent with typical leachate composition.

Treated leachate levels were in excess of the ELV for this facility in the early months of the reporting period, but are back within this limit by the end of the reporting period. Maintenance of the treatment plant is currently being carried out and it is hoped that performance of the plant will improve further after these works.

5.5 Landfill Gas

Gas is monitored at locations LG1 to LG8 inclusive. LG4 has since been lost (covered over). Wells LG1, LG2, LG3 & LG5 are located in waste. Wells LG6, LG7 and LG8 are peripheral gas wells and these wells were replaced during this reporting period.

All wells within waste are actively producing landfill gas. Gas monitoring on the mature waste body is indicative of methanogenic gas processes that would be occurring under anaerobic conditions. Maximum and minimum levels recorded for each piezometer are shown below in Table 5.3.

In peripheral wells there were exceedances of both the methane (max 25.4% at LG6) and carbon dioxide (max 15.1% at LG6) trigger levels (1.0% v/v & 1.5% v/v respectively).

Table 5.3: Range of gas concentrations from wells in waste

PIEZOMETER	Methane (CH₄)		Carbon Dioxide (CO₂)	
	Min.Conc	%	Min.Conc	%
LG1	12.9		51.1	
LG2	0.1		0.7	
LG3	0.1		0.7	
LG4	0.4		0.7	
LG5	0.2		33.4	

5.6 Dust

Dust monitoring was not undertaken at the site prior to restoration due to the absence of operational activity. Monitoring plans were in place if required during the restoration contract. This monitoring programme was not deployed. Dust levels are inspected during monitoring and if required a dust management programme will be deployed.

6. VOLUME OF LEACHATE PRODUCED AND VOLUME DISCHARGED

As previously stated a leachate cut off channel has been installed along part of the western site boundary to intercept seepage of leachate from the landfill mass. The raw leachate is treated through the "Puraflo" peat filtration bed. A water balance calculation has been undertaken and is shown in Appendix B. This indicates that the estimated volume of leachate being generated at the site for the reporting period is 4745m³.

7. REPORTED INCIDENTS AND COMPLAINTS SUMMARIES

- 7.1 Donegal County Council reports on an on-going basis all instances where either surface waters or groundwaters are found to contain in excess of 0.2mg/l ammonia, or where perimeter gas wells are found to contain greater than either 1% methane or 1.5% carbon dioxide. These are reported as incidents twice per year when the results become available.
- 7.2 Apart from the on-going emissions exceedances reporting referred to above, no incidents have been reported to the Environmental Protection Agency during this reporting period.
- 7.3 No complaints where received during this reporting period.

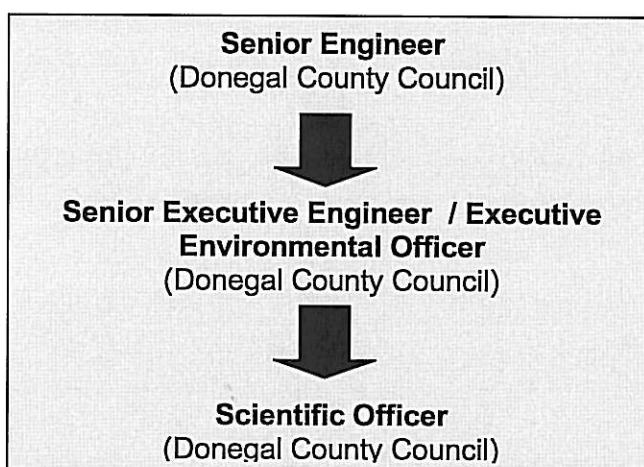

8. REVIEW OF NUISANCE CONTROLS

The facility is no longer operational and all areas formerly used for the placement of municipal waste have been fully restored. Accordingly no incidence of nuisance has been recorded during the reporting period. The appropriate control systems (as outlined in the EMS) will be deployed should any sign of nuisance, in the form of vermin, litter, odour, dust or birds, be detected in the course of the regular site inspections.

9. MANAGEMENT STRUCTURE OF SITE

9.1 Management Structure

The management of the landfill site is as follows.

9.2 Management Responsibility

Senior Engineer: Overall responsibility for the management of the site and maintenance of the waste licence. Delegation of authority and responsibility to ensure the effective management of the facility.

Senior Executive Engineer: Responsible for the ongoing management of the facility as directed by the Senior Engineer.

Executive Environmental Officer: Responsible for overall compliance with EPA Licence.

Scientific Officers: Carry out environmental inspections, monitoring, analysis and reporting in accordance with licence requirements.

10. PROGRAMME FOR PUBLIC INFORMATION

A public communication programme has been included in the EMS in accordance with Condition 2 of the Waste Licence to ensure that information concerning the environmental performance is available at reasonable times. The public may view environmental records at the Environment Section in Donegal County Council Headquarters in Lifford. Details regarding this are contained in Section 2 of the Environmental Management System Manual.

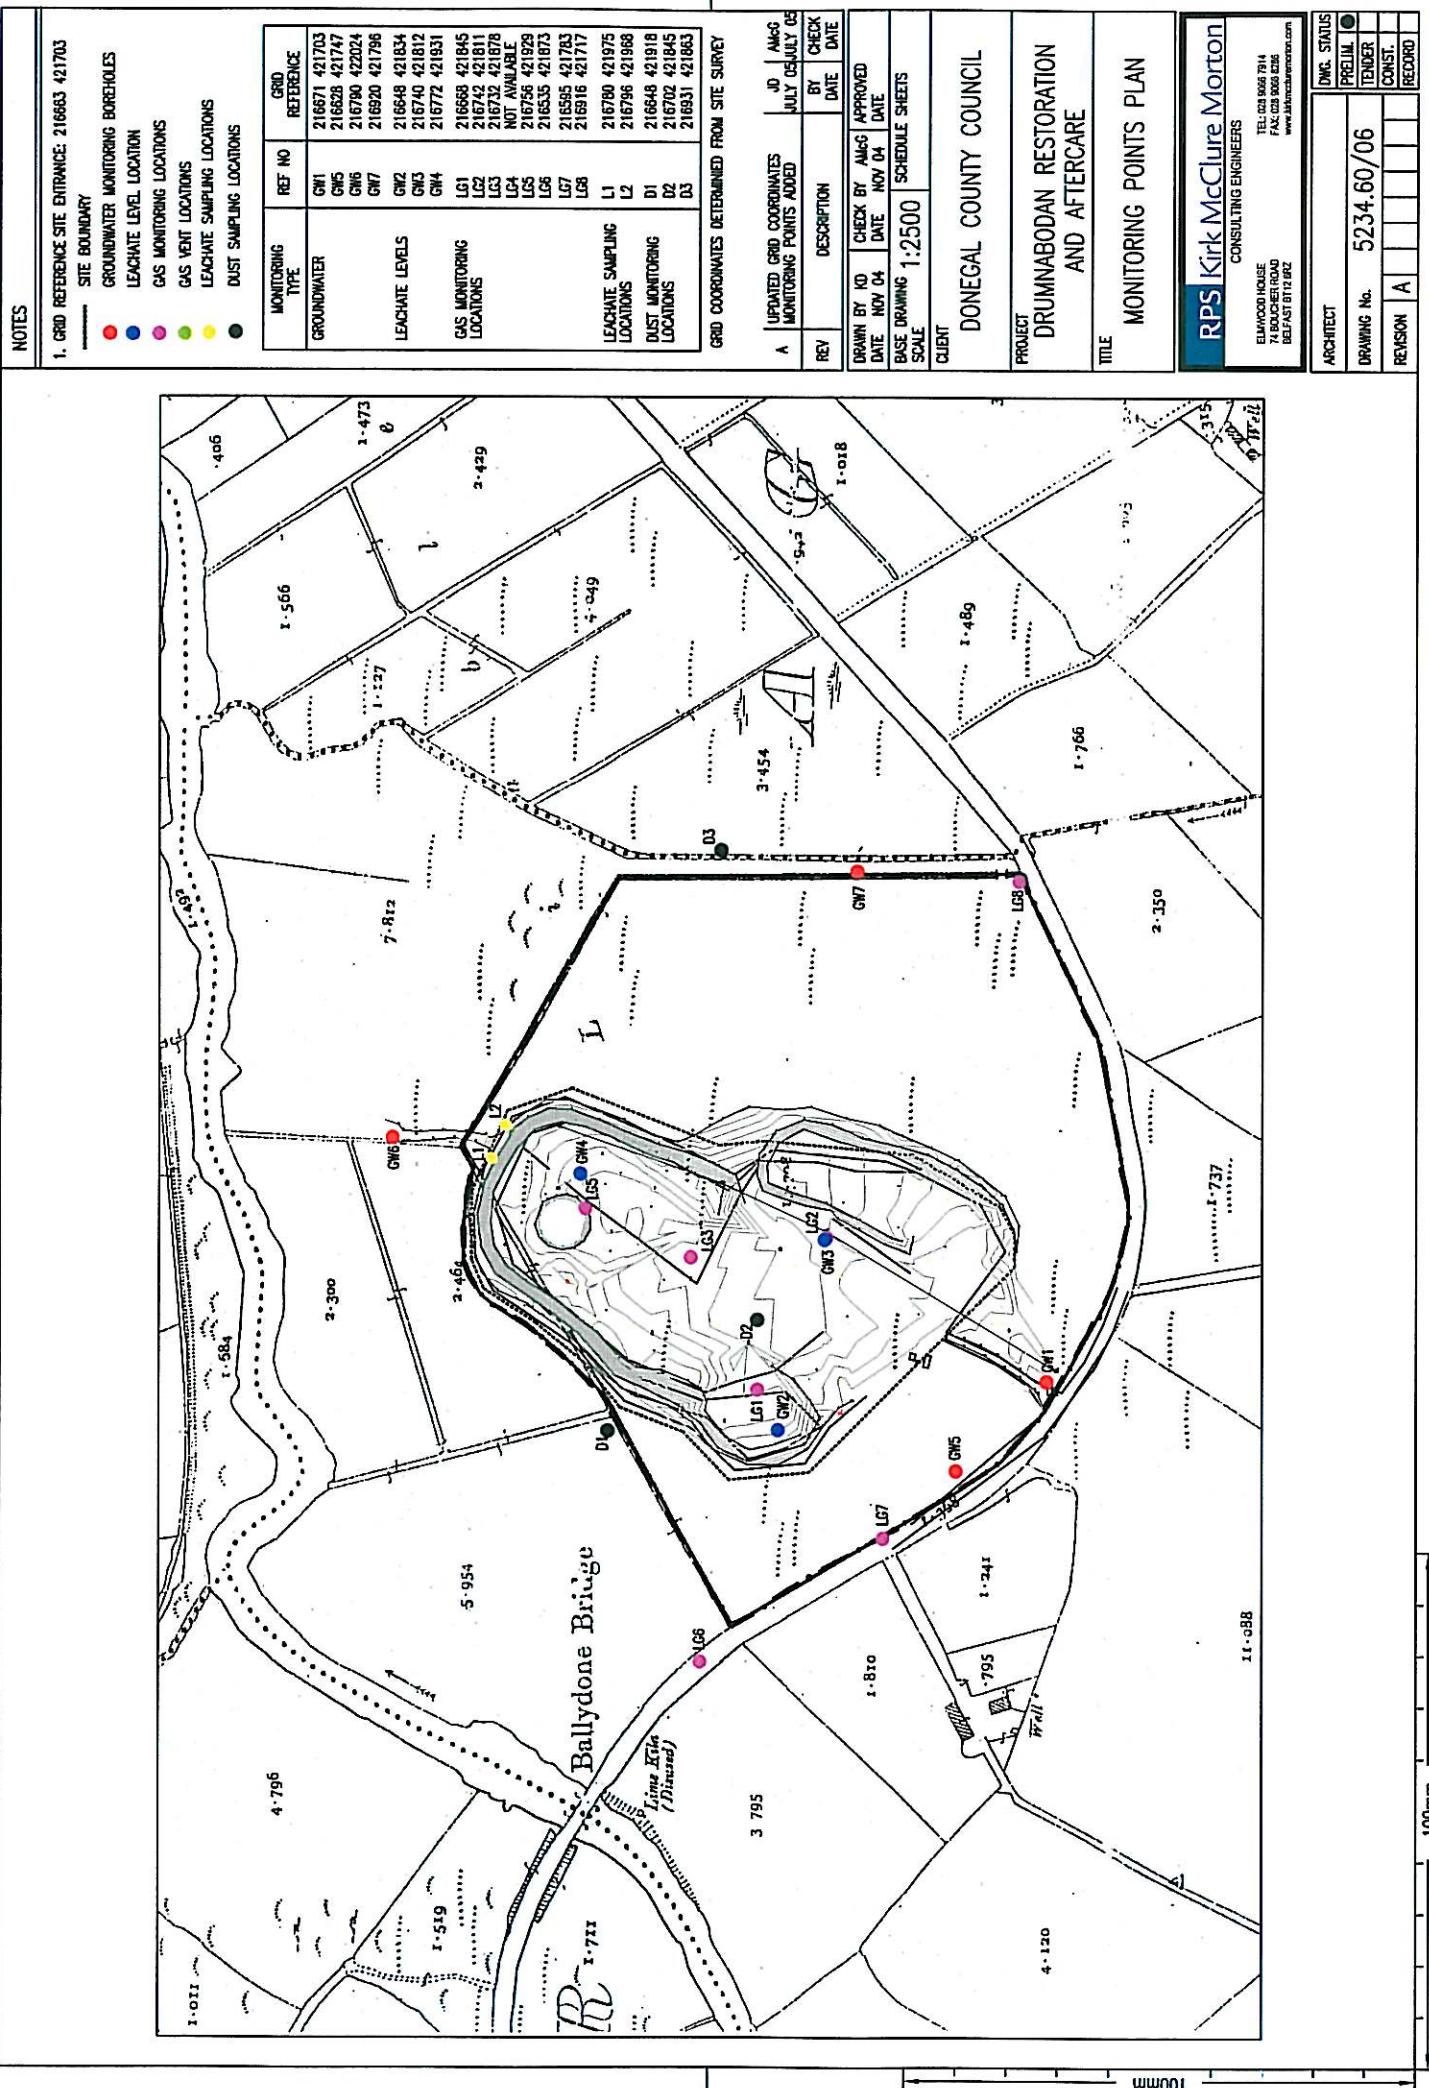

A public information / consultation programme was run prior to restoration works commencing.

11. CAPPING AND RESTORATION OF THE SITE.

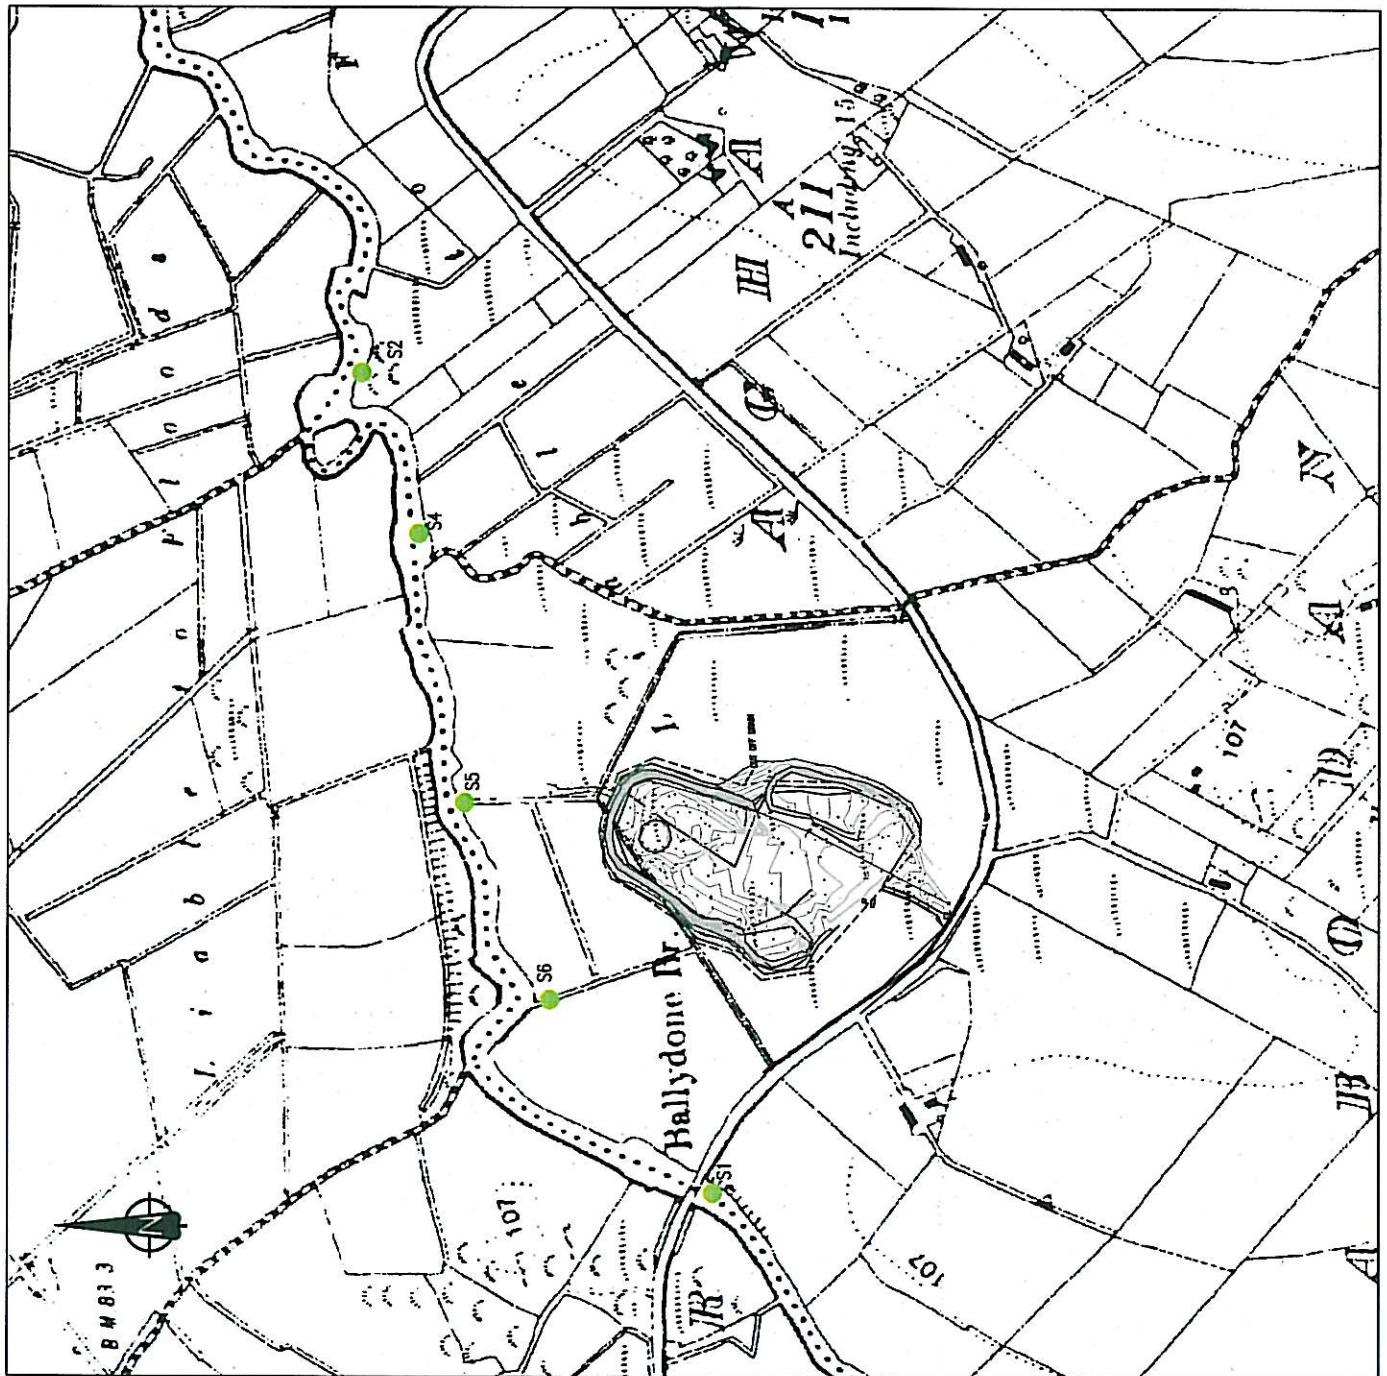

The site was fully restored during the reporting period (works commenced April 2007 and works were substantially complete in January 2008).

12. REPORT ON DEVELOPMENT WORK UNDERTAKEN DURING THE REPORTING PERIOD, AND A TIME SCALE FOR THOSE PROPOSED DURING THE COMING YEAR.

During 2009 the monitoring programme highlighted the fact that the treatment system was not delivering the reductions in ammonia levels in leachate previously achieved. The situation was investigated in conjunction with the proprietors of the system, Bord na Mona, and some investigations carried out. The peat filtration media was inspected by Bord na Mona and found to be in good enough condition to facilitate treatment. It was concluded that the system was overgrown and pipework clogged. An overhaul of the system is currently underway to clear vegetation and replace pipework. The performance of the system will be reviewed when work is complete.

Dichlorodifluoromethane	<1.3	1,2-Dibromoethane	<2.3
Chloromethane	<1.7	Tetrachloroethene	<1.5
Vinyl Chloride	<1.2	1,1,1,2-Tetrachloroethane	<1.3
Bromomethane	<2	Chlorobenzene	<3.5
Chloroethane	<2.5	Ethylbenzene	<2.5
Trichlorofluoromethane	<1.3	p/m-Xylene	<2.5
trans-1,2-Dichloroethene	<1.9	Bromoform	<3
Dichloromethane	<3.7	Styrene	<1.2
Carbon disulphide	<1.3	1,1,2,2-Tetrachloroethane	<5.2
1,1-Dichloroethene	<1.2	o-Xylene	<1.7
1,1-Dichloroethane	<1.2	1,2,3-Trichloropropane	<7.8
tert-butyl methyl ether	<1	Isopropylbenzene	<1.4
cis-1,2-Dichloroethene	<2.3	Bromobenzene	<2
Bromochloromethane	<1.9	2-Chlorotoluene	<1.9
Chloroform	<1.8	Propylbenzene	<2.6
2,2-Dichloropropane	<3.8	4-Chlorotoluene	<1.9
1,2-Dichloroethane	<3.3	1,2,4-Trimethylbenzene	<1.7
1,1,1-Trichloroethane	<1.3	4-Isopropyltoluene	<2.6
1,1-Dichloropropene	<1.3	1,3,5-Trimethylbenzene	<1.8
Benzene	<1.3	1,3-Dichlorobenzene	<2.2
Carbontetrachloride	<1.4	1,4-Dichlorobenzene	<2.7
Dibromomethane	<2.7	sec-Butylbenzene	<1.7
1,2-Dichloropropane	<3	tert-Butylbenzene	<2
Bromodichloromethane	<0.9	1,2-Dichlorobenzene	<3.7
Trichloroethene	<2.5	n-Butylbenzene	<2
cis-1,3-Dichloropropene	<1.9	1,2-Dibromo-3-chloropropane	<9.8
trans-1,3-Dichloropropene	<3.5	1,2,4-Trichlorobenzene	<2.3
1,1,2-Trichloroethane	<2.2	Naphthalene	<3.5
Toluene	<1.4	1,2,3-Trichlorobenzene	<3.1
1,3-Dichloropropane	<2.2	Hexachlorobutadiene	<2.5
Dibromochloromethane	<1.7		

SEMI-VOLATILE ORGANIC COMPOUNDS		<i>Drumaboden Landfill, Co. Donegal</i>	<i>Kilmacrennan Co. Donegal</i>
Month			
Location	GW7		
Lab No			
PARAMETERS	UNITS	PARAMETERS	UNITS
Phenol	<1	Benzo(k)fluoranthrene	<1
2-Chlorophenol	<1	Benzo(a)pyrene	<1
2-Methylphenol	<1	Indeno(1,2,3-cd)pyrene	<1
4-Methylphenol	<1	Dibenzo(a,h)anthracene	<1
2-Nitrophenol	<1	Benzo(ghi)perylene	<1
4-Nitrophenol	<1	2-Chloronaphthalene	<1
2,4-Dichlorophenol	<1	2-Methylnaphthalene	<1
2,4-Dimethylphenol	<1	Carbazole	<1
4-Chloro-3-methylphenol	<1	Isophorone	<1
2,4,6-Trichlorophenol	<1	Dibenzofuran	<1
2,4,5-Trichlorophenol	<1	Dimethyl phthalate	<1
Pentachlorophenol	<1	Diethyl phthalate	<1
1,3-Dichlorobenzene	<1	Di-n-butylphthalate	<1
1,4-Dichlorobenzene	<1	Di-n-octylphthalate	<1
1,2-Dichlorobenzene	<1	Bis(2-ethylhexyl)phthalate	<1
1,2,4-Trichlorobenzene	<1	Butylbenzylphthalate	<1
Nitrobenzene	<1	4-Chloroaniline	<1
Azobenzene	<1	2-Nitroaniline	<1
Hexachlorobenzene	<1	3-Nitroaniline	<1
Naphthalene	<1	4-Nitroaniline	<1
Acenaphthylene	<1	2,4-Dinitrotoluene	<1
Acenaphthene	<1	2,6-Dinitrotoluene	<1
Fluorene	<1	Bis(2-chloroethyl)ether	<1
Phenanthrene	<1	4-Bromophenylphenylether	<1
Anthracene	<1	4-Chlorophenylphenylether	<1
Fluoranthrene	<1	Hexachloroethane	<1
Pyrene	<1	Hexachlorobutadiene	<1
Benzo(a)anthracene	<1	Hexachlorocyclopentadiene	<1
Chrysene	<1	Bis(2-chloroethoxy)methane	<1
Benzo(b)fluoranthrene	<1	N-nitrosodi-n-propylamine	<1

APPENDIX B
WATER BALANCE CALCULATION

DRUMABODEN WATER BALANCE CALCULATION

Year	Active Phase	Rainfall		Temp Restored area		Restored area		Leachate		Cumulative
		area	RCA[m3]	Infiltration	RCA[m2]	Infiltration	RCA[m3]	produced	Lo(m3)	
2009	Closed	1171.70				40,500		4745		4745
Total		1171.70								

Assumptions

IRCA=	Fully Capped/R/Restored area infiltration of rainfall estimated (2-10%), EPA Manual	10%	%
Landfill area	Area of landfill site.	40,500	m ²
Rainfall Data	Data taken from Met Eireann Station Malin Head, Total Rainfall used.	1171.7	mm

APPENDIX C
E-PRTR Regulations
(AER Electronic Reporting System)

At the time of reporting the AER-PRTR return database for 2009 is not yet available for download. As such this return cannot yet be made. When the system is available for the 2009 period the return will be made and a copy of this forwarded to the Agency under separate cover.
