Re: Notice in accordance with Regulation 18(3)(b) of the Waste Water Discharge (Authorisation) Regulations 2007

Dear Mr Huskisson,

With reference to the notice received for the Bandon Waste Water Discharge Licence Application on 20th of August last and Cork County Council's response by email seeking a revised submission date of the 12th of October 2010, please find our response attached.

[Handwritten signature of Patricia Power]

Yours Faithfully

Patricia Power
Director of Services,
Area Operations South,
Floor 5,
County Hall,
Cork

+Bandon Regulation 18 Further Information Response

- Question 1** Assess the likelihood of significant effect of the waste water discharges from the above agglomerations on the relevant European sites by referring to Circular L8/08 “Water Services Investment and Rural Water Programmes – Protection of Natural Heritage and National Monuments” issued by the Department of Heritage and Local Government. In particular, the flow diagram in Appendix 1 should be completed and the results of each section recorded. Provide details of the results of this assessment within one month of the date of this notice and provide a reasoned response for the decision. If significant effects are likely then and appropriate assessment must be carried out and a report of this assessment forwarded to the Agency by the date specified below. You are advised to provide the requested information in accordance with the “Note on Appropriate Assessments for the purposes of the Waste Water Discharge (Authorisation) Regulations, 2007 (S.I. 684 of 2007)”.

For inspection purposes only.

Wastewater Discharge Licence Application: D0136-01 Bandon

Circular L8/08 2 September 2008 Water Services Investment and Rural Water Programmes – Protection of Natural Heritage and National Monuments

APPENDIX 1

Water Services Schemes - Natural Heritage Checklist for Local Authorities What projects must be screened?

For new projects and significant changes to any existing operations, if the answer is 'yes' to any of the following, the project (i.e. construction, operation and maintenance) must be screened for its impacts:	
1. Is the development in or on the boundary of a nature conservation site NHA/SAC/SPA?	No
2. Will nationally protected species be directly impacted? Wildlife Acts (1976 and 2000), Flora Protection order (S.I. 94 of 1999)?	No
3. Is the development a surface water discharge or abstraction in the surface water catchment, or immediately downstream of a nature conservation site with water dependant qualifying habitats/ species?	No
4. Is the development a groundwater discharge or abstraction in the ground water catchment or within 5 km of a nature conservation site with water-dependant qualifying habitats/species?	No
5. Is the development in the surface water or groundwater catchment of salmonid waters?	No
6. Is the treatment plant in an active or former floodplain or flood zone of a river, lake, etc?	No *
7. Is the development a surface discharge or abstraction to or from marine waters and within 3km of a marine nature conservation site?	No
8. Will the project in combination with other projects (existing and proposed) or changes to such projects affect the hydrology or water levels of sites of nature conservation interest or the habitats of protected species?	No

***Note: Bandon WWTP is located on the floodplain of the river Bandon but the site is bunded to prevent ingress of water. In the severe flooding experienced in Bandon in November 2009, the bund was marginally breached but none of the equipment/plant was affected and the treatment plant was able to work uninhibited.**

Question 2 Review the assessment of the impact of the discharge in relation to the requirements of the Environmental Quality Objectives regulations (S.I. No. 272 of 2009) and resubmit and update where relevant

The River Bandon into which the WWTP discharges has a “moderate status”. Therefore the lower “good” standard contained in the surface water regulations was used for comparison purposes.

The upstream and downstream sampling results for 2008 at aSW01uBAND and aSW02dBAND were compared to the relevant EQR/S from the surface water regulations in the following tables. The sample results and the EQR/S were included only if there were values for both, to allow comparison.

The upstream and downstream sample results incorporated in the following tables are those laid out in the upstream and downstream sheets of the Revised Table E. However many of these results are at the limit of detection, or are based on averages that include assumed figures. Therefore additional upstream and downstream tables which incorporate actual results for analysis below the Limit of Detection have been included. This “Analysis below the Limit of Detection” is laid out on a separate sheet in the Revised Table E.

For inspection purposes only.

PREDICTED IMPACTS

MASS BALANCE EQUATIONS FOR BOD:

Worst Case Scenario:

Maximum Discharge, Low Flow in the River, Maximum BOD in Discharge.

Flow of River (95%ile) = 1.99m³/sec

Mean BOD in River (upstream) = 2.032mg/L

Max volume of discharge = 0.0429m³/sec

Max value for BOD in discharge = 25.0mg/L (Max from Online Tables)

$$C_{final} = \frac{(1.99 \times 2.032) + (0.0429 \times 25.0)}{(1.99 + 0.0429)}$$

$$C_{final} = 2.51\text{mg/l BOD}$$

This is in breach of the 1.5 mg/L Mean but within the 2.6mg/L 95%ile EQS for BOD.

However it is worth noting that the mean upstream BOD value is 2.032mg/L, which is already in breach of the EQS of 1.5mg/L and the 95%ile upstream BOD value is 4.11mg/L, which also breaches the EQS of 2.6mg/L.

Normal Scenario:

Normal Discharge, Median Flow in the River, Mean BOD in Discharge.

Flow of River (Median) = 11.4m³/sec

Mean BOD in River (upstream) = 1.482mg/L

Normal volume of discharge = 0.027m³/sec

Mean value for BOD in discharge = 10.44mg/L (2008 Mean from Outlet Table E4)

$$C_{final} = \frac{(11.4 \times 1.482) + (0.027 \times 10.44)}{(11.4 + 0.027)}$$

$$C_{final} = 1.5\text{mg/l BOD}$$

This meets the 1.5 mg/L Mean EQS and the 2.6mg/L 95%ile EQS for BOD.

Note: According to EPA guidance notes version 7,

"Assimilative capacity calculations shall use the appropriate receiving water flow values, i.e., Dry Weather Flow for dangerous or toxic substances, median flow for Ortho-phosphate and 95%ile flow for other substances"

Based on these notes the 95%ile BOD standard is met under all conditions.

MASS BALANCE EQUATIONS FOR AMMONIA:

Worst Case Scenario:

Maximum Discharge, Low Flow in the River, Maximum Ammonia in Discharge.

Flow of River (95%ile) = 1.99m³/sec

Mean Ammonia in River (upstream) = 0.054mg/L

Max volume of discharge = 0.0429m³/sec

Max value for Ammonia in discharge = 3.0mg/L (Max from Online Tables)

$$C_{\text{final}} = \frac{(1.99 \times 0.054) + (0.0429 \times 3.0)}{(1.99 + 0.0429)}$$

$$C_{\text{final}} = 0.116\text{mg/l Ammonia}$$

This is in breach of the 0.065mg/L Mean but within the 0.14mg/L 95%ile EQS for Ammonia.

Normal Scenario:

Normal Discharge, Median Flow in the River, Mean Ammonia in Discharge.

Flow of River (Median) = 11.4m³/sec

Mean Ammonia in River (upstream) = 0.054g/L

Normal volume of discharge = 0.027m³/sec

Mean value for Ammonia in discharge = 0.38mg/L (2008 Mean from Outlet Table E4)

$$C_{\text{final}} = \frac{(11.4 \times 0.054) + (0.027 \times 0.38)}{(11.4 + 0.027)}$$

$$C_{\text{final}} = 0.055\text{mg/l Ammonia}$$

This is within the 0.065mg/L Mean and 0.14mg/L 95%ile EQS for Ammonia.

Consent of copyright owner required for any other use.

Note: According to EPA guidance notes version 7,

"Assimilative capacity calculations shall use the appropriate receiving water flow values, i.e., Dry Weather Flow for dangerous or toxic substances, median flow for Ortho-phosphate and 95%ile flow for other substances"

Based on these notes the 95%ile BOD standard is met under all conditions.

MASS BALANCE EQUATIONS FOR ORTHOPHOSPHATE:

Worst Case Scenario:

Maximum Discharge, Low Flow in the River, Maximum Orthophosphate in Discharge.

Flow of River (95%ile) = 1.99m³/sec

Mean Orthophosphate in River (upstream) = 0.025mg/L

Max volume of discharge = 0.0429m³/sec

Max value for Orthophosphate in discharge = 4.5mg/L (Max from Online Tables)

$$C_{final} = \frac{(1.99 \times 0.025) + (0.0429 \times 4.5)}{(1.99 + 0.0429)}$$

$$C_{final} = 0.119\text{mg/l Orthophosphate}$$

This is in breach of the 0.035mg/L Mean and 0.075mg/L 95%ile EQS for Orthophosphate.

Normal Scenario:

Normal Discharge, Median Flow in the River, Mean Orthophosphate in Discharge.

Flow of River (Median) = 11.4m³/sec

Mean Orthophosphate in River (upstream) = 0.025mg/L

Normal volume of discharge = 0.027m³/sec

Mean value for Orthophosphate in discharge = 2.96mg/L (2008 Mean from Outlet Table E4)

$$C_{final} = \frac{(11.4 \times 0.025) + (0.027 \times 2.96)}{(11.4 + 0.027)}$$

$$C_{final} = 0.032\text{mg/l Orthophosphate}$$

This is within the 0.035mg/L Mean and 0.075mg/L 95%ile EQS for Orthophosphate

Note: According to EPA guidance notes version 7,

"Assimilative capacity calculations shall use the appropriate receiving water flow values, i.e., Dry Weather Flow for dangerous or toxic substances, median flow for Ortho-phosphate and 95%ile flow for other substances"

Based on these notes the Orthophosphate EQS mean and 95%ile standard is met when assessed using median flow conditions.
