APPENDIX 1 - European Pollutant Release and Transfer Register

1. INTRODUCTION

This is the 2010 Annual Environmental Report (AER) for the Greenstar Environmental Services Ltd. (GES), Materials Recovery Facility (MRF) at Ballykeefe, Dock Road, Limerick (W0082-02) and covers the reporting period January 2010 to December 2010. The AER has been prepared in compliance with Condition 10.6 of the licence.

The content is based on Schedule F of the Waste Licence and the report format follows guidelines set in the "Guidance Note for Annual Environmental Report" issued by the Environmental Protection Agency $(Agency)^1$.

¹ EPA (Environmental Protection Agency) 1999 Waste Licensing – Draft Guidance on Environmental Management Systems and Reporting to the Agency

2. SITE DESCRIPTION

2.1 Site Location and Layout

The facility is located on the Dock Road in Limerick, in an area dominated by industrial and commercial buildings and activities. The facility is located adjacent to the N69, on the main Limerick to Foynes road.

2.2 Waste Management Activities

The licence allows GES to accept and process 90,000 tonnes of commercial and industrial, construction and demolition and municipal wastes.

2.2.1 Waste Types & Processes

The facility is licensed to accept the following waste types and quantities, as specified in Schedule A of the licence: -

- Commercial and Industrial Waste (70,000 tonnes),
- Municipal (15,500 tonnes),
- Construction & Demolition (4,500 tonnes).

No hazardous wastes or liquid waste are accepted at the facility.

The maximum tonnage of each waste type accepted, may be altered with the prior agreement of the Agency as long as the total maximum tonnage is not exceeded.

The key processes carried out at the facility include: -

- Segregation of recyclable materials (paper, cardboards, plastic, wood, metals, glass);
- Bulking up of Municipal Solid Waste;
- Segregation and bulking of C&D waste;

- Transfer of recovered and residual materials to appropriately licensed recycling, recovery and disposal outlets;
- Timber shredding

Commercial and Industrial Waste

Both mixed and segregated commercial waste is collected from commercial sources. Commercial waste rich in recyclables (paper, cardboard, glass, metal, green waste and wood) is delivered to the facility both by permitted third party hauliers and by GES vehicles. Plastic, card and paper are baled and stored prior to transfer to a suitable permitted/licensed off-site recycling outlet. Timber recovered from the mixed C&I waste stream and delivered to the facility as a single waste stream is shredded onsite. Biodegradable wastes suitable for composting which is accepted at the facility are sent to an offsite composting facility. The remaining non-recyclable material is bulked and sent to appropriately licensed landfills.

C& D Waste

Waste loads include mixed construction and demolition wastes and soil and stone. The material arrives in skips of varying sizes. The waste loads are inspected, plasterboard diverted to an internal skip and the remainder off loaded into an external C&D bay. The majority of the incoming C&D material is recovered and sent off-site either for re-use or recycling. The non-recyclable materials are transferred to a licensed landfill.

Timber Shredding

Untreated timber pallets and untreated construction timbers are shredded in the northern area of the yard and stored in a shred timber bay prior to dispatch as compost bulking/aeration agent or as raw material for chipboard/MDF manufacturers.

2.2.2 Plant List

A list of the plant in use at the facility is given in Table 2.1. The plant provides 100% duty and 50% standby for waste processing.

| No. | Plant | Operational | Standby |
|------|------------------------|--------------|--------------|
| 110. | Tiant | Capacity tpd | Capacity tpd |
| 1 | 360° Komatsu Excavator | 100 | 70 |
| 1 | Volvo Loading Shovel | 500 | 350 |
| 2 | Doppstadt shredders | 200 | 150 |
| 1 | Doppstadt trommel | 200 | 140 |

Table 2.1Existing Plant

3. EMISSION MONITORING

The monitoring required by Condition 7 and Schedule D of the licence includes surface water, wastewater, groundwater, dust and noise monitoring. The monitoring locations are shown on Figure 3.1. As per the licence, monitoring results are included in reports submitted to the Agency at quarterly intervals. An overview of the results of the monitoring is presented in this Section.

3.1 Surface Water Monitoring

Surface water is generated by rainfall on roofs and the paved open yard areas. The run-off is collected and discharged via 2 No. three chamber interceptors to a man made drain at the eastern boundary of the site. The drain discharges to the Ballinacurra Creek, which ultimately discharges to the Shannon River.

Surface water monitoring is required at the outfall points FE1A and FE1B following treatment from a split interceptor. Monitoring is also required in the drain upstream (WS9) and downstream (WS10) of the discharge points. In July 2007, the Agency amended the monitoring programme to include an inspection chamber on the surface water drainage system prior to treatment at the interceptors (Metal Bay manhole (MH) 5). The monitoring locations are shown on Figure 3.1. Monitoring was carried out bi-annually in accordance with the licence until June 2010 when the monitoring frequency was increased to monthly following a request from the Agency. It was not possible to collect samples at FE1A in September, November and December 2010 as there was no discharge at the monitoring location.

The emission limit set for BOD was exceeded at FE1A and FE1B in June, July and August. The emission limit for total suspended solids was exceeded at FE1A in July, August and October and in July and August at FE1B. The emission limit for ammonia was exceeded at FE1A and FE1B in July and August. The emission limit set for TSS was exceeded at FE1A in October 2010. The Agency were notified of these exceedances in accordance with Condition 8.1 of the Licence. The results are included on Tables 3.1 to 3.5.

The October 2010 monitoring results showed a significant improvement in surface water quality discharges compared to previous monitoring. The BOD, ammoniacal nitrogen and mineral oil results were significantly below the ELVs. This reflected the extensive jetting and de-sludging of all surface water pipelines, sumps and oil interceptors carried out in July and again in September 2010. Although there was an exceedance of the ELV for suspended solids, there was no impact downstream of the facility (WS10) and further routine cleaning of the system has reduced the levels of suspended solids as will be shown in the Q1 2011 report.

Table 3.5Surface Water Monitoring Results 2010 MH-5

- No flow at time of sampling

3.2 Foul water Monitoring

Foul water emissions are treated in the on-site Klargestor treatment plant and discharge to a percolation area. Foul water monitoring is required at two monitoring locations, FE2 which is the discharge from the treatment plant and at the truckwash discharge, as shown on Figure 3.1. The truck wash was not operational in Q3 & Q4 2010, a sample was collected in Q3 but the sample location was dry in Q4. The monitoring results are included on Tables 3.6 and 3.7.

The results are compared to the performance standard set in the EPA Waste Water Treatment Manual Guidelines. The results show that the discharge is of good quality and with the exception of TSS in January. The discharge from this facility goes to a percolation area and ultimately to ground and it is understood that the area is not categorised as nutritionally sensitive.

| Parameter | Units | Jan | Feb | Mar | Apr | Jun | Jul | Aug | Oct | Performance Standards |
|------------------------|----------|-------|------|-------|------|------|------|------|-------|--------------------------|
| pН | pH units | 6.04 | 6.94 | 7.6 | 6.7 | 7.12 | 7.4 | 7.29 | 8.08 | - |

| Total Nitrogen | mg/l | 6.0 | 15.0 | 27.8 | 17.8 | 8.6 | 15.8 | 8 | - |

3.3 Groundwater Monitoring

Groundwater monitoring is carried out bi-annually in accordance with Schedule D at three wells, GWM1, GWM2 and GWM3, whose locations are shown on Figure 3.1. GWM1 is close to the entrance to the dry recyclables recycling building, GWM2 is at the northern site boundary and is downgradient of site activities. GWM3 is outside the operational area and is upgradient of site activities. There are no emission limits or trigger levels set in the licence and so the results are compared to the Interim Guideline Values (IGV) on groundwater quality published by the Agency. The results are shown on Table 3.8 and 3.9.

The levels are all below their respective IGVs with the exception of ammoniacal nitrogen at GWM1 in May 2010 and conductivity at GWM2 in May. The IGV levels represent typical background or unpolluted conditions. However, the Agency recognises that levels higher

than the IGV may occur naturally depending on the local geological and hydrogeological conditions.

| Parameter | Units | GWM1 | GWM2 | GWM3 | IGV |
|------------------------|-------|--------|--------|--------|-------|
| BOD | mg/l | 3 | 4 | 4 | - |
| TSS | mg/l | 532 | 362 | 254 | - |

| Aliphatic Hydrocarbons | mg/l | < 0.01 | <0.01 | <0.01 | - |

3.4 Noise Monitoring

The annual noise survey was carried out in compliance with Schedule D of the licence in September 2010. The full monitoring report was submitted to the Agency on the 22^{nd} December 2010. The monitoring locations include four boundary locations (NI1 – NI4) as shown on Figure 3.1. The survey was conducted when the site was fully operational and confirmed that noise emissions fully complied with the licence conditions and that the facility is not impacting negatively on the nearest sensitive receptors. A summary of the noise results is shown on Table 3.10.

Noise levels at all four monitoring locations were greater than the 55 dB limit set in the licence, however it was determined that the facility not the sole contributor to these levels and is not a noise nuisance in the local environment. There are significant contributions to the noise environment from adjacent neighbouring activities. It is unlikely that noise levels attributable to the site of greater than 55 dB could be recorded beyond the site boundaries.

| Station | Time | LAeq | LAF10 | LAF90 | Noise audible |
|---------|-----------------|--------------|--------------|--------------|---|
| | | 30 min dB | 30 min dB | 30 min dB | |
| NI1 | 10.33- 11.03 | 56 | 55 | 45 | The dominant source of noise was facility/plant noise, e.g. truck movements, waste processing activities within the facility. Significant contributions from external sources including a distant mid-frequency noise (unidentified), birdsong and wind-generated noise. Noise contribution from low-frequency noise from adjacent building (probably extraction fans). |
| NI2 | 11.07- 11.37 | 60 | 56 | 45 | Dominant noise source was facility generated operational noise. Work immediately adjacent to the monitoring position including timber- pallet movement and collection and other facility truck movements. Other sources of noise included a low frequency from the nearest on-site building probably due to extraction fans and wind generated noise. |
| NI3 | 09.57- 10.27 | 55 | 57 | 47 | Primary source of noise was possibly an engine-noise from a neighbouring site. Facility noise contributing to the noise environment included radio noise from the recycling plant and intermittent noise from skip unloading. Birdsong and wind generated noise were also discernable. |
| NI4 | 09.20- 09.50 | 73 | 77 | 63 | GES emissions were inaudible. Dominant noise source at this location was road traffic on the Dock Road. |

Table 3.10Noise Monitoring Results 2010

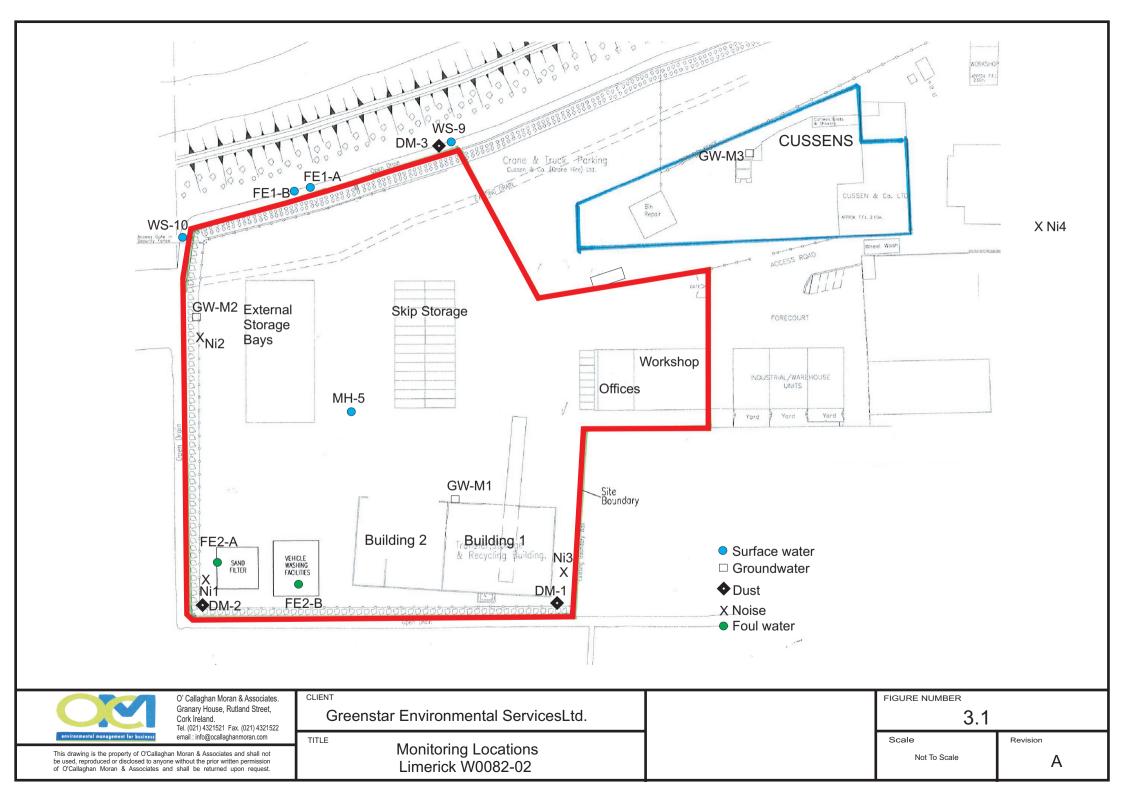

3.5 Dust Monitoring

Dust monitoring was carried out on three occasions at three on-site locations (DM1, DM2 and DM3) in May-June, July and October 2010 in accordance with Schedule D of the licence. The results of the monitoring are included on Table 3.11.

The dust emission limit $(350 \text{ mg/m}^2/\text{day})$ was not exceeded at any monitoring location during the monitoring period.

| Table 3.11 Dust Monitoring Results 2010 |
|--|
|--|

| | Units | May – June | July | October | Deposition Limit Value |
|-----|------------------------|---------------|-------|---------|---------------------------|
| DM1 | mg/m²/day | 116.1 | 136.7 | 124.5 | 350 |
| DM2 | mg/m ² /day | 92.8 | 66.7 | 90.2 | 350 |
| DM3 | mg/m ² /day | 306.1 | 182.2 | 80.1 | 350 |

4. SITE DEVELOPMENT WORKS

4.1 Specified Engineering Works

There were no Specified Engineering Works carried out in 2010. Repairs to the surface water drainage system will be carried out in 2011. It is proposed to introduce a civic amenity area at the facility in 2011. Agreement has been reached with the Agency in relation to this.

4.2 Summary of Resource & Energy Consumption

Table 4.1 presents an estimate of the resources used on-site during the reporting period.

| Table 4.1 | Estimate of | Resources | Used | On-Site | |
|-----------|-------------|-----------|------|----------------|--|
| | | | | | |

| Resources | Quantities |
|----------------|----------------|
| Diesel (green) | 40,000 litres |
| Electricity | 62,600 Units |
| Hydraulic Oil | 360 litres |
| Engine Oil | 120 litres |
| Mains Water | 234,000 litres |

4.3 Bund Integrity Testing & Pipeline

Condition 3.11.5 of the licence requires that tank and bund testing be carried out at least once every three years. The bunds were tested in October 2009 for capacity and adequacy and passed fit for purpose. The Licence was technically amended on February 2nd 2011 and now includes condition 3.11.5 which states that the integrity testing of all underground pipelines and tanks must be carried out every 3 years. This work was carried out in Q4 2010 and will be submitted to the Agency in Q2 2011.

5. WASTE RECEIVED AND CONSIGNED FROM THE FACILITY

Table 5.1 shows the total quantities of waste received and consigned from the facility in 2010. Table 5.2 shows the total quantities of waste received and consigned in 2009. Table 5.3 shows the quantities of waste received and consigned in previous years. A breakdown of the waste types is provided in accordance with the European Waste Catalogue and Hazardous Waste list.

The total quantity of waste received was 34,835.30 tonnes. The total waste consigned was 34,476.86 tonnes. Approximately 672 tonnes of waste remained on site at the end of 2010 which will be consigned in 2011.

The recovery rate for the facility is estimated at 61.62%. All the wastes consigned from the site went to recovery and disposal facilities agreed with the Agency.

| EWC | Description | Waste In | Waste Out |

6.1 Incidents

The routine monitoring programme identified five incidents during the reporting period. One incident was in relation to the foul water sample and four in relation to the surface water samples.

In January 2010 the suspended solids limit set in the waste water treatment manual was exceeded at FW-1. The emission limit set for BOD was exceeded at surface water discharge monitoring locations FE1A and FE1B in June, July and August. The emission limit for total suspended solids was exceeded at FE1A in July, August and October at FE1A and in July and August at FE1B. The emission limit for ammonia was exceeded at FE1A and FE1B in July and August. The emission limit set for TSS was exceeded at FE1A in Q4 2010. The Agency were informed of these exceedances in accordance with Condition 8.1 of the licence.

Significant cleaning and desluding of the surface water drainage system was carried out in Q3 & Q4 2010 and it is expected that this will lead to improvements in the quality of the surface water discharged from the facility. The results from Q1 2011 show that the surface water quality in the discharge is now compliant, as will be discussed in the Q1 2011 report. Although there were some exceedances of the surface water discharge ELVs the quality of the receiving water downstream of the site was not impacted by site activities.

6.2 Register of Complaints

GES maintains a register of complaints received in accordance with Condition 10.4 of the waste licence. There were no complaints received during the reporting period.

7. ENVIRONMENTAL DEVELOPMENT & CONTROL

7.1 Environmental Management Programme Report

GES has developed an Environmental Management System (EMS) for the facility. In 2011 the facility will strive to gain ISO 14001 & OHSAS 18001 certification. In achieving this, the facility will operate under an Integrated Environmental, Health & Safety Management System going forward. With the exception of the Schedule of Objectives and Targets, which are amended annually as part of the AER, and a revision of a number of the operating procedures, the environmental management programme was not amended in 2010. In 2011 the facility will receive an updated and comprehensive list of procedures suitable for licence & legal requirements in order to gain ISO & OHSAS certification which will be submitted to the Agency in the 2011 AER. The schedule of Objectives and Targets, including their status for 2010 (Table 7.1), as well as the proposed Objectives and Targets for 2011 (Table 7.2) are presented below.

7.1.1 Site Management Structure

Management and Staffing structure: -

Name: Mary Dwane,

Responsibility: Depot Manager

Experience: 11 years experience waste management experience; has completed the FÁS waste management course.

Name: Michael Whelan,

Responsibility: Facility Manager

Experience: 11 years experience waste management experience; has completed the FÁS waste management course.

7.1.2 Staff Training

Staff training carried out during the year included environmental induction, manual handling and vehicle safety training. Details on staff training for 2010 are available in the facility office.

7.2 Environmental Management Programme

7.2.1 Schedule of Objectives 2010

The objectives that were achieved during this reporting period are outlined in Table 7.1. Details on the progress made are also included on the table and an evaluation of what has been achieved to date is presented below.

Objective 1 – Redefine Licence Boundary

Postponed due to sale of company. Issue to be reviewed 2011.

Objective 2 – Continue to increase recycling rates at the facility

Water clarification sludge was used for landfill cover during 2010. Other sludges were dispatched for composting, rather than disposal. C&I Dry Wastes were dispatched to MRF after hard recyclables removal. Street sweepings were also trialled in MRF to ascertain viability of plastics recovery. The quantity of tonnes consigned to Landfill fell by 43% on 2009 figures. Recycling rate is now 62% v 47% in 2009.

Objective 3 – Improve Emergency Response / Emissions to Surface Water

Quarterly monitoring of surface water was increased to monthly from June 2010. Comprehensive drainage maintenance was carried out in Q3 & Q4 2010 which included de-sludging, integrity testing and defect identification was initiated in July 2010 and all actions required were completed in February 2011. The Emergency Response Plan will be updated in Q2 2011.

Objective 4 – Legislative Compliance

Acceptance criteria for waste water was agreed with Limerick City Council Main Drainage Plant Operator June 2010. Limerick City Council withdrew its previouslygiven approval to connect with its Main Drainage Plant. GES is in discussions with the Agency regarding alternatives.

7.2.2 Schedule of Objectives 2011

A schedule of targets and objectives for 2011 has been set by the management of the facility. These objectives are outlined in Table 7.2.

7.3 Communications Programme

GES are committed to setting the standard in waste management and ensuring environmental compliance in all operations. In addition, GES's Environmental, Health & Safety Policy makes a specific commitment to ensure that this policy and environmental records are available to the public and interested parties.

To this end GES has drawn up a Communications Programme, which details how members of the public are facilitated in accessing and viewing environmental information at the facility. Members of the public who wish to inspect these files may do so ant any reasonable time by making an appointment with the Operations Manager using the telephone number posted on the main facility entrance sign.

7.4 Report Financial Provision

GES has accrued over $\notin 3,000,000$ in funds, to provide for any potential environmental liabilities. GES has adequate insurance cover for environmental liabilities to $\notin 6,350,000$ for any one occurrence, which will apply to "sudden identifiable and unintended incidents".

Table 7.1Objectives and Targets for 2010

| No | Objective | Target | Responsibility | Timescale |
|----|--|--|----------------------------------|---------------|
| 1 | Redefine Licence Boundary | Discussions to be held with new owners regarding their plans for a possible Licence Review | Responsible Manager | December 2010 |
| 2 | Continue to Increase Recycling Rates at the facility | Increase organic waste recovery and find alternative uses for other wastes (e.g. water clarification sludge for landfill cover rather than disposal | Area Manager | Ongoing |
| 3 | Improve Emergency Response/ Emissions to Surface Water | Complete training/retraining for all relevant staff to the ERP in 2010 | Environmental Management Team | December 2010 |
| 4 | Legislative Compliance | Comply with terms of Licence W0082-02 | All | Ongoing |

Table 7.2Schedule of Objective and Targets 2011

| No | 2011 Objective | ve Target Responsibility | | Status |
|----|---|--|-----------------|---------|
| 1 | Awareness and Training | Continue to ensure that appropriate training is carried out specific to all site personnel as per the Company's established Training Matrix. | Site Management | Q4 2011 |
| 2 | Energy & Resource Consumption | Summarise energy and resource usage on a quarterly basis with a view to reducing consumption | Site Management | Q4 2011 |
| 3 | Review and Assess the Effectiveness of Nuisance Control Procedures | Continually review and assess all nuisance control procedures to ensure minimal impact on the surrounding area. | Site Management | Q4 2011 |
| 4 | Pollution Prevention | Strive to ensure that monitoring results comply with the licence limits and investigate any exceedances of emission limit values. | Site Management | Q4 2011 |
| | | Continue to ensure the integrity and maintenance of all drainage infrastructure. | Site Management | Q4 2011 |
| 5 | Civic Amenity | As per EPA grant a Civic Amenity site will be established at the facility to service the general public's waste recycling requirements. | Site Management | Q2 2011 |
| 6 | ISO 14001 | Certification to ISO 14001 | Site Management | Q3 2011 |

7.5 Nuisance Controls

GES has contracted a vermin control company to carry out nuisance control at the facility. Rentokil Initial Ltd. provide and maintain forty bait boxes at the facility and also provide for the treatment of insects at the facility. Weekly nuisance and litter inspections are carried out by the Environmental Officer and litter picks are carried out daily.

7.6 European Pollutant Release and Transfer Register Regulation

Under the European Pollutant Release and Transfer Register Regulation (EC) No. 166/2006 GES are required to submit information annually to the Agency. A copy of the information submitted to the Agency via the web-based data reporting system is included in Appendix 1.

7.7 Wastewater Volumes

In 2010 35.1 tonnes of interceptor liquids and sludge were removed off site to an appropriate licensed facility.

8. OTHER REPORTS

No other reports were specified by the Agency.
