#### **1.0 INTRODUCTION**

The Environmental Protection Agency (EPA) issued Advanced Environmental Solutions (Ireland) Ltd, with a Waste Licence for its Waste Transfer Station at Cappincur Industrial Estate, Tullamore, Co. Offaly on 5<sup>th</sup> October 2009. The Waste Licence reference number is W0104-02.

The facility is currently licensed to a maximum of 50,000 tonnes of waste per annum.

In May 2007, Bord na Móna PLC acquired Advanced Environmental Solutions (AES) Ireland Ltd., one of Irelands leading waste management companies which services 5,000 commercial customers and 60,000 domestic customers.

AES Ireland Ltd. currently operates a network of recycling & transfer facilities throughout Leinster and further afield. These facilities are located in Navan, Co. Meath, Tullamore, Co. Offaly, Portlaoise, Co. Laois, Nenagh, Co. Tipperary and Rosslare, Co. Wexford.

ANUA Environmental was commissioned to prepare and submit the Annual Environmental Report (AER) for the facility in compliance with Condition 11.7 of the Waste Licence. This report addresses Condition 11.7 of the Waste Licence for the facility.

This report addresses Condition 11.7 of the waste license for the facility which states;

"The licensee shall submit to the Agency, by the 31<sup>st</sup> March each year, an AER covering the previous calendar year. This report, which shall be to the satisfaction of the Agency, shall include as a minimum the information specified in Schedule E: Annual Environmental Report of this license and shall be prepared in accordance with any relevant guidelines issued by the Agency".

This report addresses the items listed in Schedule E: Annual Environmental Report of the Waste License for the facility. This AER covers the reporting period from 1<sup>st</sup> Jan. 2011 up to 31<sup>st</sup> December 2011.

#### **1.1** Site Description and Activities

AES operates a Waste License (W0104-02) for its Waste Transfer Station at Cappincur Industrial Estate, Tullamore, Co. Offaly. Operations at the facility include the receipt of domestic, commercial, industrial and construction waste, which is sorted and segregated for onward recycling / recovery in accordance with the recycling potential. Waste deemed unsuitable for recycling / recovery is segregated and compacted for disposal off-site.

The site is located in the Cappincur Industrial Estate towards the east of Tullamore town, off the L-02025 road to Daingean – Figure 1.1.

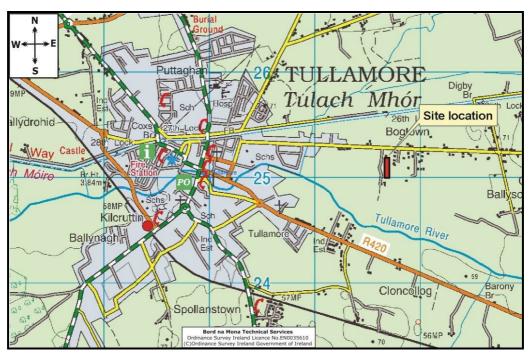

Figure 1.1 Site location map of the AES facility, Tullamore, Co. Offaly.

The site location map and monitoring location maps are included in Appendix 1

#### **1.2 Waste Handling Procedure**

Normal operational hours of the site are between the hours of 07:00 to 23:00 Monday to Saturday inclusive. Waste is not accepted at the facility on Sundays or Bank Holidays.

Current waste acceptance procedures involve the use of a computer based programme, called Integrated Waste System (IWS). The software is linked to the on-site weighbridge and is used for recording waste quantities accepted on-site. Details including the waste type, EWC code, vehicle registration number, and customer are recorded on the system as per the requirements of Condition X of the waste licence.

After weighing, waste loads are brought to the enclosed Processing Building where it is deposited on the floor for visual inspection to ensure that all wastes comply with the requirements of the Waste Licence, W0104-02. Different waste streams are accepted to different parts of the building to maximise the sorting and segregation of waste types. For example mixed dry recyclables are accepted into the recycling processing building which is accessed from the south-western end of the building. Mixed Solid waste (MSW) and commercial skip waste is deposited in the waste processing building and accessed through the north-eastern entrance.

The Waste Segregation Manager is responsible for carrying out visual inspections and for maintaining a written record of all loads. Written records of each inspection are recorded on the incoming waste inspection sheet at the end of each working day. Only after visual inspection can the waste be identified for disposal or recovery.

Within the Processing Building waste is sorted according to its recycling potential and is either deemed suitable for further onwards recycling/ recovery or compacted within one of the compactors on site. The categories of waste deemed suitable for segregations and recycling is dependent on available markets for such materials. Materials commonly accepted for recycling include; steel & iron, cardboard & newsprint, timber, soil & stone (suitable for backfill material), green waste, plasterboard, plastics, glass and occasional empty gas cylinders.

Household mixed dry recyclables are collected by AES and accepted at the facility, where the waste is segregated by mechanical and manual means into various waste streams. Bulked recylcate is then forwarded off-site for further recycling/reprocessing and/or recovery.

All waste deemed unsuitable for recycling/ recovery is loaded into designated ejector trailers or is compacted within one of the two compactors on-site. All compacted waste is sealed within specialised containers and is subsequently transported for authorised disposal. All outgoing waste being transported from the facility is weighed and recorded at the weighbridge. An individual weigh docket is printed for each waste load which records the waste type, EWC, vehicle registration, time & date, and onward waste destination.

#### 2.0 EMISSIONS FROM THE FACILITY

Emissions as per Schedule B of the Waste License, W0104-02. Surface-water, ground-water, dust and noise monitoring results are discussed in Section 6 of this report.

Foul water produced at the facility is tankered off site for final disposal. A total of 541.65 tonnes was tankered off site during the 2011 reporting period.

#### 3.0 WASTE MANAGEMENT RECORD

The waste that arrives at the facility may be characterised as follows:

- Household Waste
- Commercial Waste
- Industrial Non-Hazardous Waste
- Construction and Demolition

These waste classification, subsequent to inspection, can be further categorised as being either suitable for recycling / recovery off-site or disposal off-site to authorised disposal facilities. Hazardous waste is not accepted at the site. Hazardous waste in the form of batteries and fluorescent tubing that are inadvertently accepted to the site are segregated into individual storage skips/areas within the plant and subsequently collected by authorised contractors for further treatment/ disposal. Any materials that are suspect in nature (i.e. hazardous are not accepted at the facility) are routed to the Waste Quarantine Area within the Recycling Plant for further examination and processing prior to removal off-site for appropriate treatment/disposal by an appropriate hazardous waste contractor.

#### **3.1** Waste Activities carried out at the Facility.

Waste activities carried out at the facility are restricted to those outlined in *Part 1 – Activities Licensed* of the Waste License.

# Licensed waste disposal activities, in accordance with the Third Schedule of the Waste Management Acts 1996 to 2008.

- Class 11 Blending or mixing prior to submission of any activity referred to in a preceding paragraph of this Schedule.
- Class 12 Repacking prior to submission to any activity referred to in a preceding paragraph of this Schedule.
- Class 13 Storage prior to submission to any activity referred to in preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where the waste concerned was produced.

# Licensed waste recovery activities, in accordance with the Fourth Schedule of the Waste Management Acts 1996 to 2008.

Class 2 Recycling or reclamation of organic substances which are not used as solvents (including composing and other organic processes) (P).

- Class 3 Recycling or reclamation of metals or metal compounds:
- Class 4 Recycling or reclamation of other inorganic materials:
- Class 11 Use of waste obtained from any activity referred to in a preceding paragraph of this Schedule:
- Class 12 Exchange of waste for submission to any activity referred to in a preceding paragraph of this Schedule.
- Class 13 Storage of waste intended for submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where such waste is produced:

## 3.2 Waste Quantities and Composition.

A summary of incoming wastes accepted at the facility in 2011 is shown in Table 3.1 below while outgoing waste (sent for onward processing/recovery/disposal) is shown in Table 3.2 overleaf.

Table 3.1:         Incoming Waste to AES Tullamore Wast	te Transfer Facility 2011
EWC Code	Incoming Waste (Tonnes)
150101 BC – Bailed Cardboard	5337.773
150101 C – Loose Cardboard	901.908
150101 MX – Mixed Paper & Cardboard	374.798
150102 PL – Plastic Packaging	1136.814
150104 – Metallic Packaging	1.56
150105 -	9.22
150106 – Mixed Paper	22.94
150107 – Glass Packaging	487.5
070514 – solids wastes from MFSU of pharmaceuticals	13.37
170102 –Bricks	11.66
170201 – Wood from C&D	587.13
170407 – Mixed Metals	679.33
170504– Soil and Stones	32.28
170802 - Gypsum-based construction materials other than	19.13
those mentioned in 17 08 01	
170904 – Mixed C&D wastes other than those in 17 09 01,	2165.71
17 09 02, 17 09 03	
180104 – wastes whose collection and disposal is not subject	224.32
to special requirements in order to prevent infection (eg: dressings, plaster casts, linen, disposable clothing, diapers)	
190503 – Off-Specification Compost	242.43
191210 – Combustible Waste (refuse derived fuel)	117.7
191212 – Other wastes (including mixtures of materials)	70.1
from mechanical treatment of wastes other than those mentioned in 19 12 11	
200101NP – Newsprint	571.67
200102 – Domestic Glass	2.46

#### 4.0 RESOURCE AND ENERGY CONSUMPTION

#### 4.1 **Resource Consumption Summary**

During the recording period water usage on-site has not been recorded (mains, not metered) therefore, calculation of water usage is not possible at present.

The total gasoil for the facility, including plant and heating oil was 11654 Litres.

The total electrical consumption at the site was 82,200 kWh during the reporting period. During the same period the total volume of wastewater that was tankered offsite to a Wastewater Treatment Facility was 541.65 tonnes.

#### 4.2 Energy Efficiency Audit Report Summary

To comply with Condition 7.1 of the Waste Licence an Energy Efficiency Audit Report was submitted to the EPA during 2009. In 2011, the findings of the report were implemented, where feasible. Please refer to the Progress against Targets for 2011 in Table 5.1 for more details.

#### 4.3 Raw Materials Consumption & Waste Energy.

The site has initiated an internal waste awareness campaign. AES have proactively installed recycling bins at every site and dedicated desk trays to collect office paper for recycling to improve the efficiency of the use of raw materials in processes and the reduction in waste generated on-site.

## 5.0 ENVIRONMENTAL OBJECTIVES & TARGETS

## 5.1 Progress against Targets for 2011

Details on progress made against the Targets for 2011 are presented in Table 5.1.

	Table 5.1:   Progress against Targets for 2011					
Ref.	Objective	Target	Progress			
1	Training & Environmental Awareness	Continue roll out of EMS procedures to staff and contractors at AES Tullamore.	Achieved and on-going			
2	Environmental Management System	To maintain EMS to ISO 14001 standard	On-Going			
3	Energy Efficiency Audit	To review the Energy Efficiency Audit report and implement findings to reduce energy usage at the facility	Findings have been reviewed and selected measures have been implemented.			
4	Dust Suppression	To install a dust suppression system inside the waste transfer building	Ongoing			
5	Vehicle Record	Manvik to take over AES Fleet maintenance, ensure records are maintained on ViewWise	Not yet implemented. Ongoing.			
6	Upgrading Materials Sorting Equipment	To investigate to upgrade of sorting equipment	Not feasible due to space restrictions within processing building. To be reviewed in the future			
7	Roll out of Brown Bin	To continue the roll out of the 3 bin system	Complete in Westmeath, Athlone, Moate, Mullingar. Other areas under investigation			
8	Vehicle Re-Routing	Re-routing of waste collection routes to improve efficiency	Re-routing is an ongoing objective			
9	Glass Bin	Roll out of a glass bin collection service to be trialled in Tullamore town	Achieved			
10	Review Nuisance Controls	Review controls on site for litter, dust, vermin	On-Going			
11	On-site Waste Reduction	Continue to encourage on-site recycling, and recycling office waste	On-Going			
12	Vehicle Safety/Enviro Procedures	Review the safety and environmental procedures in place in relation to vehicles	Achieved			

	Table 5.2:Proposed Schedule of Objectives and Targets for 2012					
Ref	Objective	Target	Timescale	Response	Status	
1	Environmental Management	To Maintain EMS to ISO 140001 Standard	On-Going	Team PH/CG/H	On-Going	
	System	Conduct monthly EMS meetings	Apr-12	B/COB/M S	To maintain momentum for EMS team	
2	Energy Efficiency Audit	Review the Energy Efficiency Audit report & implement findings to reduce energy usage	May-12	PH/CG	On-Going	
3	Roll out of Brown Bin	To continue the roll out of 3 bin system	On-Going	РН	On-Going	
4	Vehicle Re- routing	Re-routing of waste collection routes to improve efficiency	On-Going	СОВ	On-Going as new customers join AES	
5	Glass Bin	Roll out of glass bin collection service to be trialed in Mullingar town	May-12	РН	On-Going	
6	Minimise Dust Nuisance offsite	Erect Netting around perimeter fencing	Jun-12	PH	On-Going	
7	On-site waste reduction	Continue to encourage on-site recycling, recycling office waste	Dec-12	Team	On-Going	
8	Ensure Compliance with Waste Licence	Review Waste licence to accommodate increased tonnages at the facility	Dec-12	PH/CG	Duty Capacity Study commissioned January 2012. Use findings to assist in compiling a proposal to carry out review of Licence to increase the tonnage though- put at facility	

## 5.2 Schedule of Objectives and Targets for 2012

A report on the progress against the proposed Objectives and Targets for 2012 will be presented in the AER in 2012.

#### 6.0 <u>SUMMARY OF ENVIRONMENTAL MONITORING</u>

Environmental monitoring at the facility is carried out in accordance with Condition 6 and Schedule C of the Waste License, W0104-02. The following sections 6.1 to 6.3 present the results of monitoring for the year 2011.

The environmental media monitored and the frequencies of monitoring at the facility are as follows;

1) Noise	Quarterly
2) Dust Deposition	Three times per year
3) Groundwater	Quarterly
4) Surface-water	Quarterly

Sections 6.0 present a summary of the Environmental Management Programme. These sections review the reports on the previous year (2011) and present proposals for the current year (2012).

#### 6.1 Noise Monitoring Report Summary

In compliance with the requirements of the Waste License, W0104-02, noise monitoring at the Cappincur Waste Transfer Station was undertaken on a quarterly basis. This changed during October 2011, following correspondence between the Agency (EPA) and AES (Ref: W0104-02/AP061D), which confirmed that is was satisfactory to conduct noise monitoring on an annual basis. It was for this reason that quarter 4 noise monitoring was not undertaken at AES Tullamore. Monitoring was carried out on the 6<sup>th</sup> January (ECS3819), 21<sup>st</sup> April (ECS3929), and 15<sup>th</sup> July 2011 (ECS3979). Noise levels were monitored at 5 monitoring locations; four boundary locations and one noise sensitive location (NSL). The noise monitoring locations are presented in Table 6.1 and monitoring maps attached in Appendix 1.

Table 6.1   Noise Monitoring Locations					
Map Reference No.	Location Type	Location			
N1	Boundary	North Western corner of site beside the main entrance			
N2	Boundary	North Eastern corner of site beside the workshop			
N3	Boundary	South Eastern corner at the back of the site.			
N4	Boundary	South Western Corner at the back of the site beside the dog pound			
NSL	Noise Sensitive Location	Private dwelling, attached to petrol station, on opposite side of main road, 300m from AES site.			

	Т	able 6.2 Noise M	onitoring Results	
Repo	rt Ref	ECS3819	ECS3929	ECS3979
Location	Duration	6 <sup>th</sup> January	21 <sup>th</sup> April	15 <sup>th</sup> July
Location	(mins)	LAeq dB	LAeq dB	LAeq (dB)
N1	30	64	60	60
N2	30	62	61	60
N3	30	51	57	56
N4	30	55	62	61
N5 (NSL)	30	55	51	52

Table 6.2 below shows the LAeq recorded at each monitoring location for each of the three monitoring events carried out during 2011.

Note 1: Results highlighted in bold represent exceedence of Waste Licence limits (55dB(A)).

Noise exceedences of the EPA guideline limit (55 dB(A)) were noted at locations N1 & N2 for all monitoring events. As these locations are to the front of the site the primary cause of these exceedences may be attributed to heavy traffic on the nearby Tullamore Bypass adjacent Daingean Road.

Noise exceedences of the EPA guideline limit (55 dB(A)) were noted at locations N3 & N4 for most monitoring events. These locations are situated at the rear of the site. Primary contributors to these exceedences were; traffic entering/exiting the rear of the site, traffic on the Tullamore bypass and dog barking from the nearby dog pound.

The dominant source of noise detected at the NSL was passing traffic (cars, vans, jeeps and lorries). Tonal noise was not detected during any of the monitoring events. Activity within the AES facility is not audible from this monitoring location during any of the monitoring events.

#### 6.2 Ambient monitoring Report Summary

In compliance with the requirements of the Waste License, W0104-02, dust monitoring at the Tullamore Waste Transfer Station was carried out three times during the 2011 reporting period. There are four dust monitoring locations on site, detailed in Table 6.3, and the locations are indentified in Appendix 1

	Table 6.3	Dust Monitoring Locations
Sample Name		Location
D1		North western corner of the facility
D2		North eastern corner of facility
D3		South western corner of facility
D4		South eastern corner of the facility

Four dust sample jars were installed for a 29 day period;  $6^{th}$  Jan.  $-4^{th}$  Feb (Round 1), for a 31 day period  $10^{th}$  May  $-10^{th}$  June (Round 2) and finally for a 31 day monitoring period  $5^{th}$  July  $-5^{th}$  August (Round 3). The results for the monitoring are presented in Table 6.4 below.

	Table 6.4: Dust Monitoring Results (mg/m²/day)					
Repo	rt Ref.	ECS3819	ECS3929	ECS3979		
<b>Monitoring</b>	Depositional	Deposition Rate 6 <sup>th</sup> Jan - 4 <sup>th</sup> Feb	Deposition Rate 10 <sup>th</sup> May -10 <sup>th</sup> Jun	Deposition Rate 5 <sup>th</sup> Jul - 5 <sup>th</sup> Aug		
Location	Dust Limit		-	J		
		Round 1	Round 2	Round 3		
D1	350	134	167	189		
D2	350	290	544	189		
D3	350	93	217	78		
D4	350	134	2704	128		

Note 1: Results highlighted in bold represent exceedance of license limits.

As can be seen in Table 6.4, there were no exceedences noted for the January / February and July / August. depositional dust monitoring events.

During the May/June monitoring event, location D2 (544 mg/m<sup>2</sup>/day) exceeded the license limit. This exceedence was attributed to passing traffic on the Tullamore Bypass (120m approx.) and Tullamore Daingean Road (12m approx). This dust sample jar was not screened from these nearby roads and was therefore subject to dust created from grit particles becoming entrained in tyres of passing vehicles.

During the May/June monitoring event, location D4 received an extremely elevated result  $(2,704 \text{mg/m}^2/\text{day})$ . This result is not deemed representative of dust emissions from site at this location as the sample jar was heavily contaminated with green algae growth which had formed dark green globules of algal solids within the dust jar.

#### 6.3 Groundwater Monitoring Report Summary

In accordance with the requirements of the company's Waste Licence, W0104- 02, AES are required to conduct monitoring of the Groundwater underlying the Tullamore facility on a quarterly basis. Monitoring was carried out at the three monitoring locations detailed in Table 6.5 and outlined in monitoring map attached in Appendix 1.

TABLE 6.5:       LOCATION OF GROUND WATER SAMPLING WELL				
Sample Point	Location	Grid Reference		
GW-1	North-east corner of site	235683 E 225122 N		
GW-2	South-east corner beside bin storage area	235717 E 225243 N		
GW-3	South-west beside loading bay	235648 E 225156 N		

Groundwater monitoring was undertaken on 10<sup>th</sup> January (ECS3819), 10<sup>h</sup> May (ECS3929), 5<sup>th</sup> July (ECS3979) and 20<sup>th</sup> October (ECS4027) and the results are presented in Table 6.6.

**Note 1 :** GTV = Groundwater Threshold Values refers to "*European Communities Environmental Objectives (Groundwater) Regulations, 2010 (S.I. No. 9 of 2010)*". "Threshold Values" have been established for pollutants that are causing a risk to groundwater bodies. Exceedance of a relevant threshold value at a representative monitoring point triggers further investigation to confirm whether the criteria for poor groundwater chemical status are being met.

Note 2 : Results highlighted in bold represent exceedences of Waste Licence limits.

The results of the quarterly groundwater monitoring events indicated a slightly elevated concentration of Ammonia (0.14mg/l) at GW2 above its respective GTV (0.05-0.136mg/l) during round 2 monitoring conducted on the 10<sup>th</sup> May 2011. All remaining parameters tested for each monitoring event were within their respective GTV's.

#### 6.4 SURFACE-WATER MONITORING REPORT SUMMARY.

In accordance with the requirements of the Waste Licence, W0104-02, the facility is required to conduct monitoring of surface-water on a quarterly basis. Surface water is sampled at one location as detailed in Table 6.7 below and included in Appendix 1 (map of monitoring locations).

Table 6.7 Sur	Surface water monitoring location	
Monitoring Location	Description	
SW-1	South west corner of facility (Discharge Point)	
(Formerly SW-2)	(Southern Boundary)	

Surfacewater monitoring was undertaken on 18<sup>th</sup> February, 10<sup>th</sup> May, 5<sup>th</sup> July and 20<sup>th</sup> October 2011 and the results are presented in Table 6.8.

Та	ble 6.8 Sur	face Water M	lonitoring Re	esults.(SW-1)	
Parameter	Quarter 1 18 <sup>th</sup> Feb	Quarter 2 10 <sup>th</sup> May	Quarter 3 5 <sup>th</sup> Jul	Quarter 4 20 <sup>th</sup> Oct	Waste licence Discharge limit Note 1

Chloride (mg/l)	42	22	36	34	250
Mineral Oil (µg/l)	<10	<10	<10	<10	5

Notes 1: Surface Water limits for discharge point only, outlined in Schedule C of Waste Licence (Ref No. W0104-02)

Notes 2: Results highlighted in bold represent parameters which have exceeded their respective limits.

As can be seen from Table 6.6 above, results indicated a slightly elevated concentration of suspended solids (36mg/l) above the Waste License Discharge Limit (25mg/l) for the quarter 1 monitoring event.

In addition a slightly elevated ammonia concentration (1.02 mg/l) was recorded above the Waste License limit (1mg/l) during the quarter 4 monitoring event.

All remaining parameters were within their respective Waste License Limits for each monitoring event.

#### 6.5 Bund Integrity Testing & Inspection Reports

Condition 6.7 of the Waste License states;

"The integrity and water tightness of all underground pipes and tanks and their resistance to penetration by water or other materials carried or stored therein shall be tested and demonstrated by the licensee. The testing shall be carried out by the licensee at least once every three years thereafter and reported to the Agency on each occasion. A written record of all integrity tests and any maintenance or remedial work arising from them shall be maintained by the licensee'.

Integrity Testing of the following bunds was carried out in October/November 2009 and found to be compliant.

- 1. Oil / Chemical Storage Bund
- 2. Diesel Storage Bund

The next bund integrity test is due to be carried out in the 2012 reporting period.

#### 6.6 Environmental Management Programme

The Environmental Management Programme (EMP) form part of the objectives and Targets for the facility, presented in Tables 5.1 & 5.2. Specifically it is proposed for the coming year:

- Household glass bin being rolled out in Mullingar town.
- Continued roll-out of the household brown bin.
- To maintain EMS and ISO 140001standard.
- To conduct monthly meetings, to maintain momentum within the EMS team.
- Conduct a review of waste licence to increase the tonnage though-put at the facility.
- To install a dust suppression system inside the waste transfer building and erect netting around perimeter of facility to minimise dust emissions to neighbouring environs.

#### 7.0 SITE DEVELOPMENT & INFRASTRUCTURAL WORK

#### 7.1 Current Infrastructure in-place

The facility is currently licensed to accept a maximum of 50,000 tonnes of waste per annum. The site has calculated the duty capacity and stand-by capacity for the plant. The current waste handling and processing equipment is capable of handling up to as follows:

MRF Line (in current configuration), 100 tonnes per day, Industrial bailer, 200 tonnes per day, C&D area, 140 tonnes per day. Total = 88,000 tonnes per annum (i.e. assuming all MRF line material is bailed). The machinery and equipment currently on-site during 2011, is presented in Table 7.1

Table 7.1   Summary	list of plant machinery on site
Details	Number

Vans	6
Diggers	2
Cherry Picker	1
Road Sweeper	1
Bobcats	2
Forktrucks	3
Baler	1
Shredder (Paper)	1
Shunter	1
MRF	1

#### 7.2 Site Development Works during 2011

There were no site development works carried out during the 2011 reporting period.

#### 7.3 **Proposed Development Works for 2012**

It is proposed to carry out the following site development works at the AES Tullamore facility;

- 1. Decommission GW! and drill new GW1 monitoring well along northern boundary.
- 2. Install a diesel tank on the southern boundary onsite see attached.
- 3. Erect netting along boundary fencing to prevent windblown items.
- 4. Routine maintenance conduct repairs to guttering and patch areas of yard with concrete.

#### 8.0 ENVIRONMENTAL LIABILITIES (FINANCIAL PROVISIONS)

The environmental liabilities are those considered to be restricted to the confines of the facility, therefore, any costs incurred in addressing same will be limited to removal and safe disposal of waste remaining on-site following an emergency event (e.g. fire or spillage) or the decommissioning and closure of the site. Such environmental liabilities cover should account for the cost of the clean up and removal of the maximum amount of waste that may be stored on site at any given time.

AES and Bord na Móna (parent company) have arranged insurance to cover the liability arising from damage to property and injury to parties as a result of sudden and unforeseen environmental impairment. AES have insurance cover for "*Business Interruption*" and have adequate reserves for the cost of removing the maximum amount of waste that may be stored on-site at any given time and to ensure that said material is transported to an authorised and capable facility.

In the unlikely event of full decommissioning, financial reserves are available to allow a formal surrender of the licence ensuring that the inherent environmental safeguard associated with this regulatory process is activated.

#### 9.0 FACILITY MANAGEMENT

#### 9.1 New Procedures developed during 2011

#### 9.2 Review of Nuisance Controls

The current procedures were in place during 2011 for Nuisance control and are fit for purpose (summarised below). No new controls are proposed for 2012. In compliance with Waste Licence, W0104-02 environmental nuisance are controlled to ensure they cause minimal impact on the immediate area.

- Waste destination for disposal may be stored within the Waste Transfer station and is generally removed from the facility within 48 hours of its arrival on-site during normal working times and within 72 hours of its arrival on-site during bank holidays. This is a waste handling procedure as part of the odour management system on-site.
- A daily inspection of the environmental nuisance controls for Vermin, Birds, Flies, Mud, Dust, Odour and litter is carried out. Nuisance inspection sheets are documented on-site on a weekly basis. A contract with a pest control company is in place to minimise environmental nuisance caused by vermin.
- All vehicles delivering waste to and removing waste and materials from the site are appropriately covered.

#### 9.3 Incidents & Complaints Summary

All environmental incidents and complaints are recorded at the facility. During the 2011 reporting period, no complaints were received at the AES Tullamore facility.

The facility had the following incidents which were reported to the Agency;

#### Quarter 1

Noise exceedance at N1, N2 on 6<sup>th</sup> Feb 2011. Surface water exceedence at SW-1 in Suspended Solids on the 18<sup>th</sup> February 2011.

#### Quarter 2

Noise exceedence at N1, N2, N3, N4 on 21<sup>st</sup> April 2011. Dust exceedance at D2 & D4 (10<sup>th</sup> May-10<sup>th</sup> June 2011). Groundwater exceedence at GW-2 in Ammonia on 10<sup>th</sup> May 2011.

#### Quarter 3

Noise exceedence at N1, N2, N3, N4 on 15<sup>th</sup> July 2011.

#### Quarter 4

Surface Water exceedance at SW-1 in Ammonia on 20<sup>th</sup> October 2011.

#### 9.4 Accident Prevention and Emergency Response

Condition 9.1 of the Waste Licence states:

"The licensee shall ensure that a documented Accident Prevention Procedure is in place which will address the hazards on-site, particularly in relation to the prevention of accidents with a possible impact on the environment. This procedure shall be reviewed annually and updated as necessary".

Condition 9.2 of the Waste Licence states:

"The licensee shall... ensure that a documented Emergency Response Procedure for the facility, which shall address any emergency situation which may originate on-site. This Procedure shall include provision for minimising the effects of any emergency on the environment. This procedure shall be reviewed annually and updated as necessary".

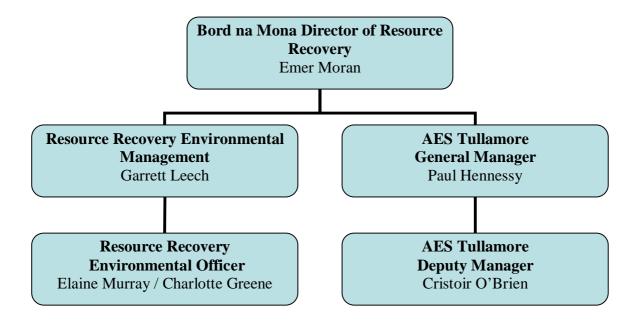

The accident prevention and emergency response has been prepared for the following:

- EP-ERP-01\_General Emergency Preparedness & Response.doc
- EP-ERP-02\_Spill Clean Up Procedure.doc
- EP-ERP-03\_Fire Explosion Procedure.doc
- EP-ERP-04\_Malicious Damage Procedure.doc
- EP-ERP-05\_Unforeseen Emergencies & Fugitive Emissions.doc
- EPL 5.1\_Emergency Contact List

These documents are attached in Appendix 2.

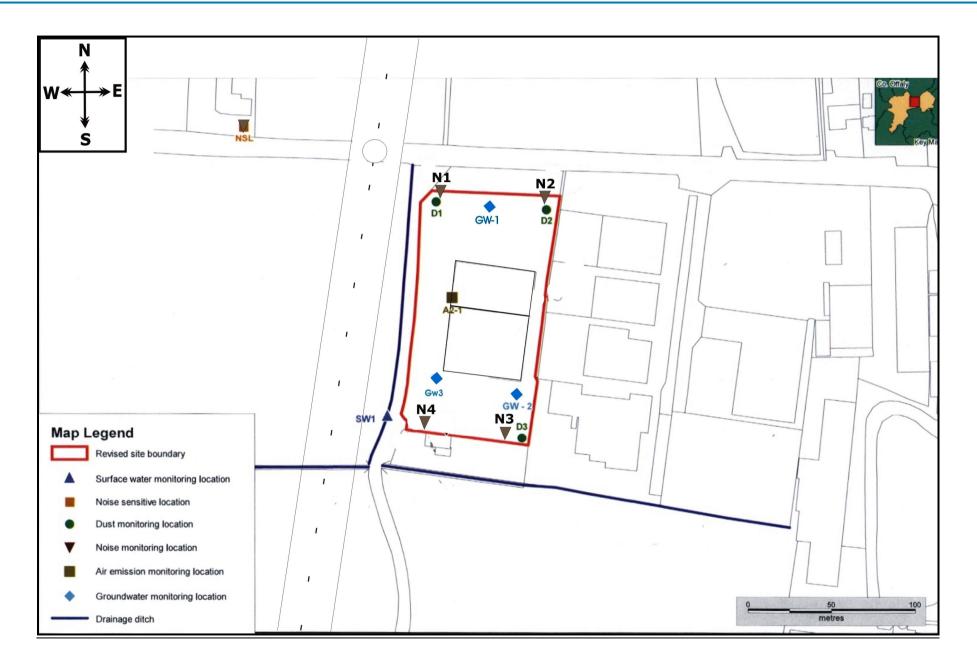

#### 9.5 Staffing Structure

The management and staffing structure for the facility is presented in Figure 10.1

Document Approved by:		Revision:	0
	AES	Issue Date:	10/11/09
	Advanced Environmental Solutions Ireland	Page:	Page 2 of 3
Site Manager	<b>AES Tullamore</b> Emergency Response Plan		

#### Procedure:

1. An Emergency Plan is prepared and maintained by AES Tullamore. This Plan details any emergency situation which could occur on site and the proposed response should this emergency occur. The Emergency Plan details procedures for the following occurrences:

Reference	Description
ERP 02	Spill Clean-up Procedure
ERP 03	Fire / Explosion Procedure
ERP 04	Malicious Damage Procedure
ERP 05	Unforeseen Emergencies

- 2. Should an emergency situation occur, the relevant response procedure documented within the Emergency Plan is implemented. Each procedure details the emergency situation, the proposed response should this emergency occur and the potential environmental impacts of this occurrence.
- 3. The Site Manager shall assume the role of Site Incident Controller, with responsibility for
  - (i) assessing the scale of the incident
  - (ii) informing emergency services
  - (iii) directing rescue and fire-fighting operations.

In the absence of the Site Manager, the Deputy Site Manager shall assume the role of Site Incident Controller.

4. Following an emergency, the Site Manager (or in his/her absence Deputy Site Manager) shall record the details of the incident. Environmental Incident Investigation and Reporting Form EPF 6.1 shall be completed which is located within the procedure for Environmental Incident Investigation and Reporting (EMS Environmental Procedure EP 6.0). Following the environmental incident, appropriate procedures shall be implemented accordingly i.e. Environmental Incident Investigation and Reporting Non-

Conformance Procedures EP 7.0 and Environmental Corrective and Preventative Action Procedure EP 8.0.

- 5. This procedure shall be reviewed by the Environmental Management team, annually or after the occurrence of an emergency situation. Additional procedures may be prepared as identified by environmental reviews/audits, environmental compliance monitoring reports, personnel during routine working hours or other communications which bring potential emergency situations to the attention of the Environmental Management Team.
- 6. The Site Manager shall notify the Environmental Protection Agency as soon as possible after the occurrence of an incident as per procedure EP 15.0 Reporting
- In the case of any incident which relates to discharges to water, the Site Manager shall notify the Local Authorities and the Southern Regional Fisheries Board as soon as practicable after the incident
- 8. On a weekly basis, all emergency response equipment shall be checked to ensure it is provided in agreed quantities and in suitable working order.
- 9. In the case that an emergency situation arises outside the hours of operation, the contact details for the designated person on call are displayed on the Facility Notice Board at the entrance to the site.
