## **Attachment K Remediation, Decommissioning, Restoration and Aftercare**

All facilities of this type require a major capital investment every 15-20 years to keep them efficient and pleasant places to work. As long as this investment is made, there is no reason that a facility of this type could not operate for up to 40 years. However, if for economic reasons or technical reasons this does not occur, decommissioning will take place.

All pig manure and organic matter will be thoroughly removed from the site. All equipment and materials of value will be salvaged. Unused feedstock and fuel will be returned to suppliers. It is then proposed that the facility be left standing after making it safe and secure. It is highly that this scenario would ever develop due to the high initial capital investment in the unit.
