- G Emergency Procedures & Numbers
- H PRTR Report

## **1. Introduction**

Kilkenny County Council's Landfill Site at Dunmore received its first Waste Licence (30/1) from the Environmental Protection Agency on the 23<sup>rd</sup> November 1999. In March 2001 an application was made to review this Licence, to incorporate an enhanced entrance, better infrastructural features and a further four cells. The EPA granted the review of the licence in May 2002 register no. 30/2. The reporting period for this Annual Environmental Report is from 01/01/13 to the 31/12/13.

Dunmore landfill site reached its full capacity in mid March 2010 and ceased operation. Capping works commenced in September 2010 and were completed by December 2010 with the exception of top soiling and seeding which were completed in March/ April 2011.

## **2. Waste Acceptance**

### **2.1 Waste Activities**

Since the landfill closure waste from households and small commercial businesses is presented at the Recycling & Waste Disposal Centre where it is packed into 35cy skips and then taken off site by Greenstar to their waste facility in Kilkenny City.

Waste is categorised in two forms on site. Mixed Municipal Waste (Wet Waste) and Dry Bulk Waste (C&I Waste).

### **2.2 Recycling**

Many recycling streams are catered for at Dunmore such as:

- Mixed Paper
- Cardboard
- Glass (Brown, Green, Clear)

- Batteries (Primary, Lead Acid, fence batteries)
- White Goods
- Brown Goods
- Household Hazardous waste
- Waste Oils/filters
- Steel/Aluminium Cans
- Mixed Metal
- Textiles
- Tetra Pack
- Plastics
- Reading Books/Magazines

All the above recycling streams with the exception of glass & aluminium cans (Glasco) and WEEE (WEEE Ireland) are taken off site by Greenstar who are contracted under a regional contract to service the facility.

In 2013 Dunmore Recycling and Waste Disposal Centre was short listed as one of three facilities to be recognised nationally for the Repak Civic Amenity/Recycling Centre of the Year Award for the second year running.

### **2.3 Green Waste**

In 2012 approval was given by the EPA to use one of the Waste Quarantine areas as a Green Waste collection point. This area holds approx. 15 – 20 tonnes of green waste i.e. grass, hedge clipping, plants, leaves etc. 2013 saw an increase in the quantity of green waste accepted at the site with 110 Tonnes in 2012 and 140 Tonnes in 2013.

### **2.4 Quantity and Composition**

The quantities of waste accepted at Dunmore in 2012 and the categorised breakdown can be found in Appendix A. The recycling and green waste quantities are also listed.

### **2.5 Deposition Methods**

Waste presented at Dunmore Recycling and waste disposal centre for disposal is

handled in the following ways: -

Waste brought to the site by householders, contractors, or small businesses is placed by them in the compactor skips located in the recycling and waste disposal centre. When this container is full, it is collected, weighed and transported by Greenstar to their facility in Kilkenny City for pre-treatment and disposal. All recyclables brought to the site are directed to the appropriate location and are placed in the appropriate receptacle for temporary storage on site. As soon as these receptacles are full, site staff arrange for the removal of the material to an authorised materials recycling facility. Greenstar (paper, plastic, cardboard, metal, tetra pak). KMK (all WEEE on behalf of WEEE Ireland). Enva (Hazardous, oils and oil filters).

### **3. Environmental Monitoring**

#### **3.1 Landfill Gas**

Landfill gas monitoring and migration results are submitted to the Agency biannually. Results for 2012 are available in Appendix B. All gas wells on the site are harnessed and the gas extracted and flared thus reducing the landfills contribution to ozone depleting gases by 90%, and also reduces landfill gas odours.

#### **3.2 Surface Emissions Survey**

Kilkenny Co. Council commissioned Odour Monitoring Ireland to perform a landfill gas surface emissions survey of Dunmore Landfill Facility W0030-02, in order to ascertain any likely sources of landfill gas surface emissions from the closed landfill. The survey was carried out on the 18<sup>th</sup> Oct. 2012.

During the surface emissions survey the following tasks were performed on site:

1. Identification of the key mechanisms that lead to the release of landfill gas surface emissions from the site.
2. Identify geographically on a site map, the locations of landfill gas surface

emissions in order to perform remediation of the identified emissions areas.

The following conclusions were drawn from the survey.

- There were no surface emissions zones greater than or equal to 50 ppm averaged over the capped area.

### **3.3 Surface Water, Groundwater and Leachate**

**Surface Water:** - Surface water is analysed quarterly and the results are submitted to the Agency. There were no surface water parameter trigger levels reached in 2013.

**Groundwater:** - Groundwater well quality is tested quarterly, and results are submitted to the Agency as set out in condition 9.1 and schedule F of the licence. Results throughout the year have shown no adverse effects to the ground water as a result of landfilling in the area, and a sample is available in Appendix C.

**Leachate:** - The composition of leachate is tested at leachate manholes and holding lagoons quarterly and results are submitted to the Agency as set out in condition 9.1 and schedule F of the licence. There were no Leachate parameter trigger levels reached in 2013.

### **3.4 Dust monitoring**

**Dust Monitoring:** - Dust Monitoring takes place three times a year and the results are submitted to the Agency. One exceedence of the permitted level of 350mg/m<sup>2</sup>/day during June was recorded due to construction work carried out at the adjoining GAA pitches. The results are shown in Appendix C:

## **4. Site Infrastructure and Development**

### **4.1 Resource and Energy Consumption**

**4.1.1 Diesel Fuel:** -The amount of fuel consumed on site in 2012 was approximately 400 litres, which has been used in the site forklift.

**4.1.2 Electricity:** -. Electricity is used in the following buildings; weighbridge office, main offices and recycling centre office. It is also used to operate the weighbridge computer, pumps, lights, and heating, CCTV cameras etc. A three phase supply was installed to meet the demands of the revised licence and supply the recycling centre, gas flare, pumps, SCADA system and extended office.

## **4.2 Development Works**

### **4.2.1. Development Works over the Reporting Period**

Over the reporting period the following development works have been carried out at the facility:

- Realignment of entrance gate to accommodate the new GAA facility adjoining the site.
- No other development works were carried out over the reporting period due to financial constraints.

### **4.2.2 Proposed Development Works**

It is proposed to carry out the following developments at Dunmore in the year 2012.

- Repositioning of the third waste compactor receptacle.
- Future works will be prioritised by necessity but will have to fall within a tight financial budget.

### **4.3 Leachate Lagoon Integrity Tests**

In respect of Condition 5.12.2, an integrity test on the leachate-holding lagoons was carried out. The objective of this survey was to determine the presence of defects within the lined containment area.

‘Geomembrane Testing Services Limited’, carried out an integrity test on the leachate holding lagoon which was submitted to the Agency in October 2012. This test is carried out using a Mobile Electrical Leak Location Survey (MELLS). The basic principle of MELLS involves impressing a high voltage DC supply across the geomembrane. The liner acts an electrical insulator between the cover material and the natural ground, and a uniformly potential field is distributed across the liner. If holes are present the current is channelled through the defects and the potential field is disturbed in these areas.

It was found that ‘the geomembrane liner was free of defects at the time of final inspection’. Detailed results of this integrity test were submitted to the agency in 2012.

### **4.4 Site Survey**

The site topographical and slope stability survey is completed annually. These surveys are submitted to the Agency under condition 8.8.1 and 8.10.1. The Last topographical survey was carried out in Dec 2013 and will be submitted to the Agency with the impending slope stability report as soon as it is compiled.

## **5. Procedures**

### ***5.1 Emergency Response Procedure***

Following an assessment of risk at the site in Dunmore, as part of our ongoing safety audits, procedures were put in place to deal with any emergency that may arise at the site.

The main risks identified at the site are explosion, fire, oil/leachate spillage and injury

to persons. A tabled procedure and list of emergency contact details can be found in Appendix I.

## **6. Nuisance Control**

**6.1 Vermin Control:** - ‘Pestkill-Pest Control Services’ visit the site on a monthly basis, to place bait for vermin control at the site. There are 12 no. specific and labelled locations at and surrounding the site where bait is placed in custom made boxes. Pestkill inspects these monitoring points monthly to see if the bait was taken or rodent activity if any are noted and bait is re-stocked if necessary. Monthly record sheets of the findings at the site are logged and kept on site..

**6.2 Fly Control:** - ‘Pestkill-Pest Control Services’ are also used if needed, for fly and wasp control in late Spring, Summer and early Autumn, and at other times if necessary.

## **7. Incidents and Complaints**

### **7.1 Incident Reports**

No incidents or complaints took place at Dunmore during the reporting period.

## **8. Staffing**

### **8.1 Staffing Structure**

Kilkenny County Council own and manage the landfill and recycling centre at Dunmore. The County Council with Philip O’Neill as Director of Service and Carol McCarthy as Senior Engineer are presently appointed as the project supervisors for design and construction phase.

The Environment Section manages the facility on behalf of Kilkenny County Council with Carol McCarty BA BAI, MIEI, as Senior Engineer of the Section.

On site Alan Rhatigan is the Facility Manager at the site. The operatives at the site also include one driver (Leachate Tanker), weighbridge operator, C.A. operator and a general operative.

The site is open Monday – Friday, 8.00 to 4.30 and on Saturday from 8.00 to 12.00. The phone numbers at the site are 056-7761999 and 056 7767848. Any queries or complaints may be made to the site or to the Environment Section in County Hall (056-7794470). A flow chart outlining the management structure is attached in Appendix G.

## **9. Public Information**

### **9.1 Procedure for Public Consultation**

Dunmore Landfill is established since 1989 and good communication has developed between the site staff and the local community. The site staff in a spirit of good neighbourliness promptly deals with any issues arising locally.

During the development of proposals for an extension to the landfill site at Dunmore, intensive consultation has taken place especially with the immediate neighbours of the site and with other local residents. This consultation process commenced in November 2000 and was ongoing during the development stage. Arising out of these consultations, Kilkenny County Council had set up a Community Liaison Group.

In 2012 the community fund generated from landfill gate receipts was handed over to the local community. The fund was used to develop the local community hall which was officially opened in 2013.

The full Council are briefed on all waste management issues on a regular basis

including developments at Dunmore, pricing structure, staff changes etc. The facility was honoured by the council members at the October council meeting in 2013 in recognition of the excellent service that is provided.

The Strategic Policy Committee on Environment (SPC 3), which comprises of council officials elected representatives and community representatives are briefed on developments at the landfill site and policy decisions are drafted as a result of the meetings.

All environmental monitoring results are held in the Dunmore Landfill, Dunmore, Co. Kilkenny and any member of the public is free to inspect them at any time during normal office hours (08:00 to 16:30 hours). Arrangements can be made to view the information at an alternative location by prior arrangement.

There is a fax and phone located at the site where queries can be made during opening hours i.e. 08:00 to 16:30, or a message can be left on the answering machine and if required will be contacted as soon as the message is received.

## **9.2 Complaints**

A complaints register is located on site and any complaint regarding the operation of the facility is recorded and the action taken to address the complaint/observation. No complaints were received during 2013.

**Additional Data Requested from Landfill operators**

For the purposes of the National Inventory on Greenhouse Gases, landfill operators are requested to provide summary data on landfill gas (Methane) flared or utilised on their facilities to accompany the figures for total methane generated. Operators should only report their Net methane (CH4) emission to the environment under T(total) KG/yr for Section A: Sector specific PRTR pollutants above. Please complete the table below:

Landfill:	Dunmore Landfill	T (Total) kg/Year	M/C/E	Method Used		Facility Total Capacity m3 per hour
				Method Code	Designation or Description	
Total estimated methane generation (as per site model)		170468.0	M	Measured	Measured	N/A
Methane flared		170468.0	M	Measured	On site data	500.0 (Total Flaring Capacity)
Methane utilised in engine/s		0.0				0.0 (Total Utilising Capacity)
Net methane emission (as reported in Section A above)		0.0				N/A

5. ONSITE TREATMENT & OFFSITE TRANSFERS OF WASTE

| PRTR# : W0030 | Facility Name : Dunmore Landfill | Filename : W0030\_2013.xls | Return Year : 2013 |

31/03/2014 12:11

Please enter all quantities on this sheet in Tonnes
