<b>Appendix G</b>	<b>Estimated Annual Gas Yield</b>

# 1 INTRODUCTION

Louth County Council holds a Waste Licence from the Environmental Protection Agency to operate Whiteriver landfill Site. This report provides a review of all data collected and the environmental aspects of operations at the site for the year 2013.

The site is located 1 km north of the main R169 Collon Rd at its junction with Whiteriver Cross, Co Louth. The facility is located in a rural setting at grid references O301450E 285625N in the townlands of Whiteriver. The northern and western boundaries adjoin two minor roads which serve scattered dwellings, whilst agricultural grazing lands adjoin the southern and eastern boundaries. The main access to the site is situated on the north western site boundary, immediately off the principle approach road. Louth County Council is the sole landowners of the site on which the landfilling activity is based.

The current waste licence (W0060-03) was issued on the 24th March 2010. The site ceased to accept municipal solid waste on the 30th of August 2013 and Incinerator Bottom ash on the 20th of December 2013. The site is now closed.

## 1.1 REPORT PERIOD

The report period for this Annual Environmental Report (AER) is from January to December 2013 and relates to the waste licence (W0060-03).

## 2 WASTE ACTIVITIES CARRIED OUT AT THE FACILITY

In accordance with Condition 5 of the waste licence only those waste types and quantities of waste listed in the Schedule shall be disposed of at the facility unless the prior agreement of the Agency has been obtained. The maximum annual tonnage of individual waste types for disposal is listed in the Schedule of the Waste Licence and total is as follows;

**Table 2.1 Maximum Annual Tonnage**

Total (Tonnes per annum)	(W0060-03)
Total	96,000

\* As from September 2003

The licence waste disposal activities in accordance with the Third Schedule of the waste

Management Act, 1996 are restricted to those listed as follows:

- Class 1:** Deposit on, in or under land (including landfill).
- Class 4:** Surface impoundment, including placement of liquid or sludge discards into pits, ponds or lagoons.
- Class 5:** Specially engineered landfill, including placement into lined discrete cells which are capped and isolated from one another and the environment.
- Class 6:** Biological treatment not referred to elsewhere in this Schedule which results in Final compounds or mixtures which are disposed of by means of any activity referred to in paragraphs 1 to 10 of this Schedule.
- Class 7:** Physio-chemical treatment not referred to elsewhere in this Schedule (including evaporation, drying and calcination), which results in Final compounds or mixtures which are disposed of by means of any activity referred to in paragraphs 1 to 10 of this Schedule.
- Class 12:** Repacking prior to submission to any activity referred to in a preceding paragraph of this schedule.
- Class 13:** Storage prior to submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where the waste is produced.

The licence waste disposal activities (W0060-03), in accordance with the Fourth Schedule of the Waste Management Act, 1996 are restricted to those listed as follows;

**Class 2 Recycling or reclamation of organic substances which are not used as solvents (including composting and other biological transformation processes):** This activity is limited to the use of compost or similar material in the restoration of the landfill.

**Class 4 Recycling or reclamation of other inorganic materials:** This activity is limited to the use of soil, subsoil and construction and demolition waste for daily cover, engineering works and the restoration of cells at the facility.

**Class 9 Use of any waste principally as a fuel or other means to generate energy:** This activity is limited to the use of landfill gas as a fuel for the generation of electricity/ energy.

**Class 10 The treatment of any waste on land with a consequential benefit for an agricultural activity or ecological system:** This activity is limited to the use of various suitable wastes as daily or intermediate cover and in the restoration of the landfill, subject to the agreement of the Agency.

**Class 13 Storage of waste intended for submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where such waste is produced:** This activity is limited to the storage of soil, subsoil and construction and demolitions wastes at the facility prior to recovery / reuse at the facility.

### 3 QUANTITY AND COMPOSITION OF WASTE RECEIVED AND DISPOSED OF DURING THE REPORTING PERIOD AND EACH PREVIOUS YEAR

The quantities of waste accepted for disposal at the facility on a yearly basis are shown in Table 3.1.

**Table 3.1 Waste Quantities Accepted (tonnes)<sup>1</sup>**

Waste	1996	1997	1998	1999	2000	2001	2002	2003	2004
Total	25,110	20,940	20,000	15,066	31,500	37,146	25,776	36,006	60,833
Waste	2005	2006	2007	2008	2010	2011	2012	2013	
Total	80,634	82,547	70,396	84,402	53,744	75,243	89,290	84,992	

Waste data figures are currently derived from weighbridge readings. Records of quantities, EWC code and type of waste accepted for disposal and recovery at the facility are maintained at the landfill site. These figures for 2013 are shown in Table 3.2 and Table 3.3.

**Table 3.2 Quantities Waste disposed of at the landfill (Tonnes) 2013<sup>2</sup>**

Waste description	Quantity waste recovered at the landfill (tonnes)	EWC code	Quantity waste recovered at the landfill (tonnes)
Bottom ash and slag other than those mentioned in 19 01 11	Incinerator Bottom ash	19 01 12	32,732
Screenings	Sewage screenings	19 08 01	475
Sludges from treatment of urban waste water	Water treatment sludges	19 08 02	1,005
Mixed municipal waste	Mixed municipal waste	20 03 01	18,250
Street-cleaning residues	Road sweepings	20 03 03	1,243
Bulky waste	Bulky waste from clearing out houses	20 03 07	677
<b>Total</b>			<b>54,381</b>

<sup>1</sup> Figures for 1996 to 2000 are the estimated annual waste inputs (tonnes). Waste data figures were estimated by means of assessment based on the category of vehicle depositing waste at the site.

<sup>2</sup> National Waste Report 2013 Survey Part 2 – Landfill Data

**Table 3.3 Quantities Waste recovered at the landfill (Tonnes) 2013**

Waste description	Quantity waste recovered at the landfill (tonnes)	EWC code	Quantity waste recovered at the landfill (tonnes)
Mixture of concrete, bricks, tiles and ceramics other than those mentioned in 17 01 06	C&D used to haul roads	17 01 07	5,340
Soil and stones other than those mentioned in 17 05 03	soils used as cover	17 05 04	5,805
Non-composted fraction of municipal and similar wastes	Wood chip. Screened oversize material from composting of green waste	19 05 01	1,340
Wood other than that mentioned in 19 12 06	Wood chip	19 12 07	1,742
Other wastes (including mixtures of materials) from mechanical treatment of wastes other than those mentioned in 19 12 11	C&D Fines for cover material	19 12 12	16,385
<b>Total</b>			<b>30,611</b>

#### **4 CALCULATED REMAINING CAPACITY OF THE FACILITY AND YEAR IN WHICH FINAL CAPACITY IS EXPECTED TO BE REACHED**

The site is now closed.

## 5 METHODS OF DEPOSITION OF WASTE

The site is now closed. Waste was filled in Phase 5, Cell 1A and 1B during 2013.

## 6 SUMMARY REPORT ON EMISSIONS

### 6.1 EMISSIONS TO AIR

In accordance with The PRTR Regulations releases of pollutants and off site transfers of waste by facilities operating in relevant industrial sectors are to be reported by the EPA to the European E-PRTR website where the facility exceeds specified thresholds. This has been completed for Whiteriver landfill site and included in Appendix B.

There are two landfill gas flares in operation at Whiteriver landfill site. Based on model predications and information from the landfill gas flares the estimated net emission of methane from the flare combustion process and both surface and lateral emissions from the landfill body is 117,418.0 kg/year as shown on Table 6.1.

Other emissions include:

- Carbon dioxide (CO<sub>2</sub>)
- 1,1,1-trichloroethane
- Hydro-fluorocarbons (HFCs)
- Chlorofluorocarbons

**Table 6.1 Net Methane Emission**

Quantities of Methane Flared and / or Utilised	T (Total) kg/Year
Total estimated methane generation (as per site model)	2,707,365.0
Methane flared	2,589,947.0
Methane utilised in engine/s	0.0
<b>Net Methane Emission</b>	<b>117,418.0</b>

### 6.2 EMISSIONS TO GROUNDWATER AND SURFACE WATER

There are no direct discharges to groundwater or surface water.

### 6.3 EMISSIONS TO WASTE WATER TREATMENT WORKS

The volume of leachate transported off site to Drogheda wastewater treatment plant during the period January to December 2013 was 25,864 m<sup>3</sup>.

## 7 SUMMARY OF RESULTS AND INTERPRETATION OF ENVIRONMENTAL MONITORING

### 7.1 MONITORING LOCATIONS

Monitoring was carried out at locations and at frequencies as specified in Schedule D of the waste licence (W0060-03). Monitoring points are labelled and permanent access to all monitoring points is maintained. BH13A was re drilled and BH20 was installed as a groundwater water borehole to detect leakages of the lagoon in June 2006. Private wells BH15 (Taffes), BH16 (Byrnes), and BH18 (Taffes) have been decommissioned and are no longer monitored as part of the licence requirements.

Monitoring points are detailed in Drawings No.IBL0069/101D, 102A and Drawing IBR0138/100 Landfill Gas piezometer. The monitoring point grid references for those available are detailed in Table 7.1. The locations of groundwater monitoring boreholes are shown in Table 7.2.

**Table 7.1 Grid References of Monitoring Points**

BH20	Upstream landfill down gradient of leachate lagoon		Overburden

## 7.2 TREATED LEACHATE QUALITY

Leachate values recorded in the lagoon (treated leachate) were within the emission limit values as set out in the waste licence except for Sulphate and COD in April, July and October.

<sup>3</sup> Private wells BH15 (Taffes), BH16 (Byrnes), and BH18 (Taffes) have been decommissioned and are no longer monitored as part of the licence requirements.

**Table 7.3 Treated Leachate Concentrations in 2013**

Parameter	Min. Conc	Max. Conc	Limit Value
Ammonia (mg/N)	421.6	726.35	900
BOD (mg/l)	40.4	100	500
COD (mg/l)	1140	2,388	1,500
Sulphate (mg/l)	42.5	344.1	250
Temperature (°C)	9	19.5	<25°C
pH (pH units)	7.8	8.5	6 – 9

### 7.3 GROUNDWATER

As required under the Waste Licence, groundwater monitoring was undertaken at the borehole locations as set out in the current waste licence. The Schedules of the waste licence requires the monitoring of certain parameters on either a monthly, quarterly or annual basis; the frequencies of the monitoring of groundwater parameters are shown in Table 7.4.

Boreholes BH1, BH3 BH4, BH5A are located within the site boundary, whilst BH6 is located approximately 240m from the eastern boundary of the site. BH2A (Crawleys) is a private well located upstream of the facility. BH9, BH10, BH11, BH12, BH13A and BH14 were installed further downstream of the extension to the existing site. Monitoring is also undertaken at two private wells. These private wells are boreholes BH17 (Holcrofts) and BH19 (McGranes, Agricultural Water Supply).

**Table 7.4 Groundwater Parameters Monitoring Frequencies as per W0060-03**

Monthly	Quarterly	Annually
Groundwater Level	Chloride	Metals /Non Metals List I and II Substances
	Dissolved Oxygen	Cyanide Residue on evaporation
	pH	Fluoride
	Total Oxidised Carbon	Total Oxidised Nitrogen
	Visual Inspection/ Odour	Total Alkalinity
	Ammoniacal Nitrogen	Orthophosphate
	Electrical Conductivity	Mercury
	Temperature	Sulphate

The results contained in this report are assessed as follows:

- Whiteriver Trigger Levels (WTL) agreed with the EPA (21 December 2004, 60-2/GEN09EM),
- EPA Interim guideline values (IGV),

- SI No 278 of 2007 EC (Drinking water) Regulations (DWR), and
- SI No 9 of 2010 European Communities Environmental Objectives (Groundwater) Regulations 2010 as amended (GWR 2010).

The results are presented graphically and in table format in Appendix C. The majority of parameters were below the recommended limits.

Parameters that are indicative of possible leachate contamination include Ammonia, Conductivity, Iron, Chloride and heavy metals.

Table 7.5 provides a summary of results in 2013 from groundwater monitoring boreholes throughout these monitoring periods.

**Table 7.5 Summary of 2013 Results from Groundwater Monitoring Boreholes**

## 7.4 QUARTERLY MONITORING PARAMETERS

All Ammonia concentrations during the reporting period were within the WTL agreed with the EPA of 0.2 mg/l N and the ECEO of 0.175 mg/l N with the exception of BH2A (0.22 mg/l N) in October, BH9 (0.35 mg/l N) in October, BH10 (0.203 mg/l and 0.21 mg/l N) in April and October, BH11 (0.42 mg/l N) in October and BH17 (0.45 mg/l N and 0.21 mg/l N) in August and October. These have reduced to below the WTL and ECEO in January, 2014.

pH values analysed during the reporting period were all within the WTL of 7.0 to 8.0 with the exception of BH12 (6.0) in October.

Electrical Conductivity values were all below the WTL of 800 µS/cm throughout the year except for BH12 (range 855-906 µS/cm). BH12 does not exceed the IGW of 1000 µS/cm and ECEO of 800-1875 µS/cm.

Chloride levels exceeded the WTL of 20 mg/l in up-gradient BH1 throughout the year. Concentrations ranged from 34 mg/l to 46 mg/l. BH5, BH10, BH13A, and BH17 downstream of the site also exceeded the WTL level throughout the monitoring period. Concentrations ranged from 21 to 41 mg/l Cl. The highest concentration was in BH5 in January. This reduced to 35 mg/l in April. The results were all below the ECEO of 187.5 mg/l.

Chloride WTL level has been exceeded in BH20 throughout the monitoring period and range from 41 to 65 mg/l Cl.

Dissolved oxygen ranges from 13% O<sub>2</sub> to 115% O<sub>2</sub>.

All boreholes were below WTL for TOC of 10 mg/l except BH20 (10.8 mg/l) in August.

## 7.5 ANNUAL MONITORING PARAMETERS

### 7.5.1 Up Gradient Annual Results

Annual analysis for metals and non-metals were undertaken at one location up gradient of the site (BH2A) on the 9th of April 2013 as per licence requirement.

Aluminium, Antimony Arsenic, Boron, Cadmium, Calcium, Chromium, Copper, Fluoride, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Sodium, Sulphate, and Zinc were below the WTL, IGV, DWR and GWR 2010 were applicable in all up-gradient boreholes.

Barium exceeded the IGV in BH1 (178.4µg/l). A cyanide concentration of <0.05 mg/l were detected in all up-gradient boreholes. This concentration is the lowest limit of detection for the methodology used for cyanide; therefore this could be lower than the WTL and IGV of 0.01 mg/l. The results are below the DWR of 0.05 mg/l.

Orthophosphate forms are produced by natural processes, but major man-influenced sources include: partially treated and untreated sewage, runoff from agricultural sites and application of some lawn fertilisers. BH3 was above the WTL and IGV of 0.03 mg/l.

Concentrations above the limit of detection were measured for the following parameters:

- Strontium concentrations ranging from 151.01 µg/l to 286.38 µg/l,
- Uranium concentrations ranging from 0.78 to 2.37 µg/l,
- Total Oxidised Nitrogen (TON) concentrations ranging from 0.19 mg/l to 0.75 mg/l, and
- Alkalinity concentrations ranging from 282 mg/l to 308 mg/l.

The remaining parameters were below the lower limits of detection.

Analysis for Polycyclic Aromatic Hydrocarbons (total 16 EPA PAHs) was <0.247 µg/l. All parameters measured were less than the limits of detection. For the purposes of determining compliance with the DWR of 0.1µg/l for PAH only four are considered – benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(ghi)perylene and indeno(1,2,3-cd)pyrene. Concentrations were as follows:

- benzo(b)fluoranthene <0.023 µg/l,
- benzo(k)fluoranthene <0.027 µg/l,
- benzo(ghi)perylene <0.016 µg/l, and
- Indeno (1, 2, 3-cd) pyrene <0.014 µg/l.

Phenol concentration was also analysed at BH2A and is <0.025 mg/l. This concentration is the limit of detection for the methodology used for Phenol however this is higher than the IGV of 0.5µg/l.

Pesticide and herbicide and semi volatile organic compound parameters were carried out in BH2A in April. The results were either below the IGV for those comparable or were below the lower detection limit for the analytical methodology used analysis.

Volatiles organic compound parameters were either below the IGV for those comparable or were below the lower detection limit for the analytical methodology used. The following parameters were detected above the detection limit:

**BH2A**

- o-Xylene ( $\mu\text{g/l}$ ) 0.1 - (IGV 10  $\mu\text{g/l}$ )

**7.5.2 Down Gradient Annual Results**

Annual analysis for List I and II substances, metals and non-metals were undertaken at two locations down gradient of the site (BH5A, BH6).

Aluminium, Antimony Arsenic Boron, Cadmium, Calcium, Chromium, Copper, Fluoride, Iron, Lead, Magnesium, Manganese, Mercury, Molybdenum, Nickel, Potassium, Selenium, Sodium, Sulphate, and Zinc were below the WTL, IGV, DWR and GWR 2010 were applicable in all down-gradient boreholes

Barium exceeded the IGV in BH6, BH9, BH10, BH11, and BH12. A cyanide concentration of  $<0.05$  mg/l was detected in all down-gradient boreholes. This concentration is the lowest limit of detection for the methodology used for cyanide; therefore this could be lower than the WTL and IGV of 0.01 mg/l. The results were below the DWR of 0.05 mg/l.

Orthophosphate forms are produced by natural processes, but major man-influenced sources include: partially treated and untreated sewage, runoff from agricultural sites and application of some lawn fertilisers. BH13A is above the WTL and IGV of 0.03 mg/l.

Concentrations above the limit of detection were measured for the following parameters:

- Cobalt concentrations ranging from  $<0.5$   $\mu\text{g/l}$  to 0.84  $\mu\text{g/l}$ ,
- Strontium concentrations ranging from 197.5  $\mu\text{g/l}$  to 261.25  $\mu\text{g/l}$ ,
- Uranium concentrations ranging from 1.21 to 5.61  $\mu\text{g/l}^4$ ,
- Vanadium concentrations ranging from  $<0.5$  to 0.97  $\mu\text{g/l}$ ,
- Total Oxidised Nitrogen (TON) concentrations ranging from 0.01 mg/l to 0.54 mg/l, and
- Alkalinity concentrations ranging from 282 mg/l to 400 mg/l.

The remaining parameters were below the lower limits of detection.

Analysis for Polycyclic Aromatic Hydrocarbons (total 16 EPA PAHs) was  $<0.247$   $\mu\text{g/l}$ . All parameters measured were less than the limits of detection. For the purposes of determining compliance with the DWR of 0.1  $\mu\text{g/l}$  for PAH only four are considered – benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(ghi)perylene and indeno(1,2,3-cd)pyrene. Concentrations were as follows:

---

<sup>4</sup> World Health Organisation (2011) Guidelines for Drinking-water Quality, Fourth Edition. Table A3.3 Guideline values for chemicals that are of health significance in drinking-water. Uranium 30  $\mu\text{g/l}$

- 
- benzo(b)fluoranthene <0.023 µg/l,
  - benzo(k)fluoranthene <0.027 µg/l,
  - benzo(ghi)perylene <0.016 µg/l, and
  - indeno(1,2,3-cd)pyrene <0.014 µg/l,

Phenol concentration was also analysed at BH9 and is <0.025 mg/l. This concentration is the limit of detection for the methodology used for Phenol however this is higher than the IGTV of 0.5µg/l.

Pesticide, herbicide and semi volatile organic compound parameters analysis were carried out in BH9 and BH14 in April. The results were either below the IGTV for those comparable or were below the lower detection limit for the analytical methodology used analysis.

Volatiles organic compound parameters were either below the IGTV for those comparable or were below the lower detection limit for the analytical methodology used. The following parameters were detected above the detection limit. There are no drinking water standards in Ireland for these substances. Those parameters comparable with WHO guideline values are referenced:

#### **BH14**

- 1,1,1,2-Tetrachloroethane (µg/l) 7.5
- 1,2,4-Trimethylbenzene (µg/l) 0.2
- 1,3,5-Trimethylbenzene (µg/l) 0.012
- 1,3-Dichlorobenzene (µg/l) 0.1
- 1,4-Dichlorobenzene (µg/l) 0.1<sup>5</sup>
- 4-Chlorotoluene (µg/l) 0.002
- 4-Isopropyltoluene (µg/l) 0.002
- n-Butylbenzene (µg/l) 0.1<sup>5</sup>
- Styrene (µg/l)0.1<sup>5</sup>

---

<sup>5</sup> World Health Organisation (2011) Guidelines for Drinking-water Quality, Fourth Edition. No health-based guideline values are given for trimethylbenzene. No guideline value proposed for 1,1-Dichloroethane. Table A3.3 Guideline values for chemicals that are of health significance in drinking-water. 1,2 Dichlorobenzene - 1000µg/l, 1,4 Dichlorobenzene 300 µg/l, Styrene - 20 µg/l, Chloroform - 300µg/l, Bromoform - 100 µg/l, Dibromochloromethane – 100 µg/l, Bromodichloromethane – 60µg/l.

- Chloroform ( $\mu\text{g/l}$ ) 23.9<sup>5</sup>
- Bromoform ( $\mu\text{g/l}$ ) 0.5<sup>5</sup>
- Dibromochloromethane ( $\mu\text{g/l}$ ) 7.2<sup>5</sup>
- Bromodichloromethane ( $\mu\text{g/l}$ ) 16.6<sup>5</sup>

**BH9**

- 1,3-Dichlorobenzene ( $\mu\text{g/l}$ ) 0.1

Chloroform, bromodichloromethane, dibromochloromethane and bromo-form are disinfection by-products commonly produced during the chlorination of water and wastewater. The DWR parametric value for Total Trihalomethanes is 100  $\mu\text{g/l}$ .

**7.6 SURFACE WATER**

Whiteriver landfill site is situated on a plateau and is located in a sub-catchment of one of the main tributaries of the White River. The White River is located approximately 4km south west of the site and it is this river, which is the main receptor for any potential surface water contamination from the site.

As required under the Waste Licence, surface water monitoring was undertaken at the station locations as set out in Table D.1.1 of the waste licence. Schedule D of the waste licence requires the monitoring of certain parameters on either a monthly, quarterly or annual basis; the frequencies of the monitoring of surface water parameters are shown in Table 7.6 below.

**Table 7.6 Surface Water Parameters Monitoring Frequencies**

Quarterly	Annually
Ammoniacal Nitrogen	Metals / non metals
Biological Oxygen Demand	Mercury
Chemical Oxygen Demand	Sulphate
Chloride	Total Alkalinity
Dissolved Oxygen	Orthophosphate
Electrical Conductivity	TON
Ph	
Total Suspended Solids	
Temperature	

The results contained in this report were assessed against the EC (Drinking water) Regulations 2007, SI .no 106 of 2007 (DWR) and European Communities Environmental Objectives (Surface Water) Regulations 2009 Environmental quality standard (EQS) and the Surface Water Quality Standards (SWQS) laid out in the European Communities Quality of Surface Water Intended for the Abstraction of Drinking Water Regulations 1989. These results are presented in table format in Appendix D.

Table 7.7 provides a summary of results in 2013 from surface water locations.

**Table 7.7 Summary of 2013 Results from Surface Water Locations**

	Units	No. of Samples	Minimum	Maximum	Mean	Standard Deviation
Alkalinity	mg/l CaCO <sub>3</sub>	3	110	328	245	118

Surface water monitoring is undertaken at one location upstream at SW1 and one location downstream of the site at SW2A. Chemical analyses of surface water are summarised in Appendix D.

SW1 and SW2A pH readings were within the A1 SWQS of 5.5 to 8.5.

Ammonia concentrations at SW1 ranged from 0.09 mg/l N to 1.22 mg/l N. An excess of 0.1 mg/l N can indicate agricultural contamination. Downstream samples of Ammonia (SW2A) were elevated at times (0.25 mg/l N to 0.314 mg/l N).

Dissolved Oxygen (DO) content ranged from 75% to 104 %O<sub>2</sub> in SW1 and 92% to 116% O<sub>2</sub> in SW2A.

COD showed a lower concentration down-stream (16 mg/l to 36 mg/l) from the site than those measured in the up-stream samples (38 mg/l to 84 mg/l) indicating possible contamination up-stream of the site. BOD also showed a lower concentration down-stream (1.7 mg/l to 2.3 mg/l) from the site than those measured in the up-stream samples (2.6 mg/l to 9.4 mg/l).

Total Suspended Solids (TSS) exceeded the SWQS of 50 mg/l during the monitoring period at SW1 in April.

Electrical Conductivity readings were below the SWQS of 1000µS/cm at both locations during the monitoring period.

#### Annual Results SW1

Aluminium, Antimony Arsenic, Barium, Boron, Cadmium Chromium, Copper, Iron Lead, Mercury, Nickel, Sulphate and Zinc were below the SWQS, DWR or EQS.

Manganese fits into the A2 SWQS classification of 300µg/l with a concentration of 137.9 µg/l. Ortho-phosphate (0.583 mg/l) exceeded the EQS.

Other parameters were Total Alkalinity (296 mg/l), Calcium (97.96 mg/l), Cobalt (0.5µg/l), Magnesium (13.33 mg/l), Potassium (9.86 mg/l), Strontium (178.2 µg/l), Uranium (0.64 µg/l), and TON (1.19 mg/l).

Other parameters measured were below the lower limits of detection.

#### Annual Results SW2A

Aluminium, Antimony Arsenic, Barium, Boron, Cadmium Chromium, Copper, Iron Lead, Mercury Nickel, Sulphate and Zinc were below the SWQS, DWR or EQS.

Manganese fits into the A2 SWQS classification of 300µg/l with a concentration of 223.3 µg/l. This concentration was higher than the upstream value. Ortho-phosphate (0.061 mg/l) exceeded the EQS.

Other parameters were Total Alkalinity (328 mg/l), Calcium (100.24 mg/l), Magnesium (12.77 mg/l), Potassium (5.4 mg/l), Strontium (191.0 µg/l), Uranium (1.26 µg/l), and TON (0.8 mg/l). Other parameters measured were below the lower limits of detection.

### **7.6.1 Lagoon/Surface Water Retention Pond**

The surface water retention pond, SW3 is located on the eastern boundary of the site and discharges to the stream running along the northern boundary of the site.

SW3 pH readings of 7.5 to 7.9 which were within the A1 SWQS of 5.5 to 8.5. The DO concentration in SW3 monitoring point was 47 % to 94% saturation.

The Ammonia concentration of <0.63 mg/l to 1.28 mg/l for SW3 were within the SWQS category of A2 (1.5 mg/l).

The BOD concentration in the SW3 ranged from 1.15 mg/l to 2.0 mg/l during this monitoring period, below the SWQS A1 classification of 5 mg/l.

Electrical Conductivity in SW3 ranged from 502 µS/cm to 680 µS/cm, which is below the SWQS of 1000µS/cm. The Chloride level of 30 mg/l to 42 mg/l was below the SWQS of 250 mg/l for this monitoring period.

Total Suspended Solids concentration of 3 mg/l to 28 mg/l were below the SWQS limit of 50 mg/l and the surface water discharge limit of 35 mg/l as per Schedule C4 of the waste licence.

The COD level in SW3 ranged from 15 mg/l to 29 mg/l during this monitoring period below and equal to the SWQS classification of 40 mg/l.

#### Annual Results

Aluminium, Antimony Arsenic, Barium, Boron, Cadmium Chromium, Copper, Iron Lead, Mercury Nickel, Ortho-phosphate, Sulphate and Zinc were below the SWQS, DWR or EQS.

Manganese fits into the A3 SWQS classification of 1000 µg/l with a concentration of 949.3 µg/l.

Other parameters were Total Alkalinity (110 mg/l), Calcium (70.9 mg/l), Cobalt (1.05 µg/l), Magnesium (7.81 mg/l), Molybdenum (1.76 µg/l), Potassium (4.06 mg/l), Strontium (167.7 µg/l), Uranium (1.05 µg/l), and TON (0.31 mg/l). Other parameters measured were below the lower limits of detection.

## **7.7 GAS MONITORING**

As required under the Waste Licence, landfill gas monitoring has been undertaken at the borehole locations as set out in current waste licence.

Schedule D of the waste licence requires the licensee to conduct monthly monitoring on the perimeter and in the waste of the landfill site. The trigger level for landfill gas emissions are Methane, greater than or equal to 1.0% v/v and Carbon dioxide, greater than or equal to 1.5% v/v. Landfill gas is monitored using a GA2000 infra-red analyser. These results are presented in Appendix E.

Results were below the trigger limit for Methane of 1% v/v for all perimeter locations (not in waste) during the year. From the results it can be seen that no methane was recorded in piezometers around the perimeter of the site.

Carbon dioxide levels around the perimeter of the site exceeded the licence requirements of 1.5% v/v during the year. Exceedances were recorded in PZ3-PZ5, PZ22, PZ28, PZ30, PZ34, PZ46, PZ48 and PZ49. The maximum levels were 5.1 % v/v at PZ46 in December.

There are two enclosed gas flares at Whiteriver Landfill Site with a combined capacity of 2,600m<sup>3</sup>/hr. Landfill gas is currently been flared through the 2,000 m<sup>3</sup>/hr flare. Two engines have been installed at the facility to generate power to the national grid. These have been commissioned but are not yet connected to the grid. This is expected to be undertaken in April, 2014.

A permanent gas monitoring system has been installed in the site building. No exceedances have been recorded.

## 7.8 MONITORING OF EMISSIONS FROM LANDFILL GAS FLARE

Flue gas monitoring was undertaken on the permanent landfill gas flares. All monitoring was carried out in accordance with Environmental Protection Agency Office of Environmental Enforcement (OEE) Air Emission Monitoring Guidance Note 2 (AG2). NO<sub>x</sub> as NO<sub>2</sub>, CO, TOC, HCL and HF emissions from both flares were within the emission limit values specified in Waste licence W060-03.

## 7.9 NOISE MONITORING

The measurements were completed on Thursday and Friday 6th – 7th March 2014 in accordance with the following environmental noise standards:

- ISO 1996: 2007 Acoustics – Description and Measurement of Environmental Noise, Parts 1-4
- EPA Guidance Note for Noise (NG4) 2012

The ranges of noise levels at each noise sensitive location during respective measuring periods were as follows:

NSL 1: Daytime: LAeq (T 15 min) 60dBA;  
Evening time: LAeq (T 15 min) 47dBA;  
Night time: LAeq (T 15 min) 46-41dBA

NSL 2: Daytime: LAeq (T 15 min) 61-58dBA;  
Evening time: LAeq (T 15 min) 54dBA;  
Night time: LAeq (T 15 min) 49-48dBA

NSL 3: Daytime: LAeq (T 15 min) 61-58dBA;  
Evening time: LAeq (T 15 min) 59dBA;  
Night time: LAeq (T 15 min) 52-45dBA

NSL 4: Daytime: LAeq (T 15 min) 74-65dBA;  
Evening time: LAeq (T 15 min) 68dBA;  
Night time: LAeq (T 15 min) 64-62dBA

- NSL 5: Daytime: LAeq (T 15 min) 57-55dBA;  
Evening time: LAeq (T 15 min) 49dBA;  
Night time: LAeq (T 15 min) 49-48dBA
- NSL 6: Daytime: LAeq (T 15 min) 66-63dBA;  
Evening time: LAeq (T 15 min) 51dBA;  
Night time: LAeq (T 15 min) 45dBA  
Flares: Daytime: LAeq (T 15 min) 58-57dBA;  
Night time: LAeq (T 15 min) 56-55dBA

The report found that concluded that all noise sensitive locations (N1 – N6) are not adversely effected by noise arising from landfill operations. Road traffic noise was the dominant noise source at Location 4. There is no specific waste licence requirement to monitor for noise at the flares. However, measurements show that it is not adversely impacting on noise levels N1-N6.

While daytime LAeq and DEN values are shown to exceed the requirements at all Locations a more accurate representation of noise levels arising from landfill operations as experienced during the survey is provided by the LA90. The current report therefore shows noise levels directly associated with landfill operations (and in the absence of traffic noise external to the landfill site) to be in compliance with the requirement of the licence.

## 7.10 DUST MONITORING

Table 7.8 details the results of the four dust monitors installed on the site. The waste licence requires dust deposition limits to be no more than 350 mg/m<sup>2</sup>/day.

**Table 7.8 Results from Dust Monitoring Analysis, Whiteriver Landfill Site**

Sampling Point	DG1	DG2	DG3	DG4	DG5	DG6
January	60.81	36.17	231.19	36.7	47.71	216.51
February	39.84	228.57	155.17	137.87	71.82	24.11
March	215.98	289.38	287.28	148.88	114.81	255.3
April	No result					
May	43.51	71.3	121.62	200.78	56.09	181.91
June	188.72	284.66	184.01	143.12	No result	No result
July	148.5	204.7	9.9	165.9	101.8	94.9
August	64.5	281.6	67.1	201.5	111.8	151.4

Sampling Point	DG1	DG2	DG3	DG4	DG5	DG6
September	196.3	216.4	81.1	177.3	92.2	66.6
October	160.2	136.1	231.8	136.7	147.7	216.8
November	139.8	228.5	155.1	137.8	171.8	124.4
December	215.8	189.4	187.4	148.8	118.1	155.3

There were no results for the month of April due to an oversight whereby sample containers were not put out. There were no results for DG5 and DG6 in June as they were vandalised. From Table 7.8 it can be seen that dust monitoring results were in compliance with the limit throughout the year.

### 7.11 METEOROLOGICAL MONITORING

Meteorological data is monitored in accordance with Schedule of the licence. This information is available on site.

### 7.12 SLOPE STABILITY ASSESSMENT

A slope stability assessment was undertaken in 2013. The analysis for the final waste slopes suggests that the factors of safety for the filling of waste are satisfactory. This report is available on site.

### 7.13 ODOUR MONITORING

Total Volatile Organic compound monitoring has been undertaken at the site on a quarterly basis. Based on these reports a number of the recommendations have been carried out to reduce the landfill gas leakage from the site and therefore reducing odour. These reports were included in quarterly monitoring reports.

### 7.14 ECOLOGY MONITORING

Biological sampling and a water quality assessment in accordance with EPA Q-rating methodology was undertaken at two locations on the White River adjacent to the landfill site on 11th September 2011. The biological assessment indicated unpolluted conditions (Q4) at both of the sites monitored. The report concluded that the biological monitoring data contain no evidence of an impact on the White River from the landfill.

## 8 RESOURCES AND ENERGY CONSUMPTION SUMMARY

Consumption of resources for the reporting period is shown in Table 8.1 below.

**Table 8.1 Consumption of Resources**

Parameters	Annual Total	Unit
Light fuel oil (Diesel)	1,998,000	kWh
Electricity	212,000	kWh

## 9 PROPOSED DEVELOPMENT OF THE FACILITY AND TIMESCALE OF SUCH DEVELOPMENT

The site is now closed. Development of the facility will be as follows:

- Reduce pressure on non-renewable fossil fuels used to generate electricity. Generation of electricity to the grid due to commence in April 2014.
- Minimise the release of landfill gases. Capping of the entire site is currently being undertaken. This is expected to be complete in June 2014.

## 10 VOLUME OF LEACHATE PRODUCED AND VOLUME OF LEACHATE TANKERED OFF SITE

The volume of leachate transported off site to Drogheda wastewater treatment plant during the period January to December 2013 is provided in Table 10.1. A water balance calculation has been undertaken and is included in Appendix F using rainfall data from metrological station on site. This estimates the annual leachate production to be approximately 22,012 m<sup>3</sup>. This is based on using worst case scenario for infiltration on temporarily capped /restored area of 30% and 10% for restored areas.

**Table 10.1 Volume of Leachate Transported Off Site in 2013**

Month	Weight Volume (m <sup>3</sup> )
January	4,792.58
February	3,390.48
March	3,395.68
April	2,054.30
May	1,605.02
June	1,383.38
July	909.28
August	988.58
September	653.92
October	2,985.14
November	2,214.10
December	1,490.98
<b>Total</b>	<b>25,863.44</b>

## **11 REPORT ON DEVELOPMENT WORKS UNDERTAKEN DURING THE REPORTING PERIOD, AND A TIMESCALE FOR THOSE PROPOSED DURING THE COMING YEAR**

### **11.1 RESTORATION OF COMPLETED CELLS/PHASES**

The following Cells/Phases have been restored to date;

- Phase I to IV
- Phase V Cell 3 a,b
- Phase V Cell 2 (4000m<sup>2</sup>)

### **11.2 TIMESCALE FOR DEVELOPMENT WORKS PROPOSED DURING THE COMING YEAR**

The remaining area of Phase 5 will be capped by June 2014. Phase 6 (undeveloped phase) will be regraded and seeded

## **12 SITE SURVEY SHOWING EXISTING LEVELS OF THE FACILITY AT THE END OF THE REPORTING PERIOD**

A topographical survey was carried out in June 2013. This is available for inspection on site.

## 13 ESTIMATED ANNUAL AND CUMULATIVE QUANTITIES OF LANDFILL GAS (LFG) EMITTED FROM THE SITE

The gas yield figures provided in Appendix G were calculated using Gassim Model 2.0. As can be seen from the data landfill gas production is calculated to be 850 m<sup>3</sup>/hr in 2014.

The EPA landfill gas survey was also completed for 2013. The average flow rate for the flare in 2013 was 1,118 m<sup>3</sup>/hr and the average methane content was 41% v/v.

---

## 14 ESTIMATED ANNUAL AND CUMULATIVE QUANTITY OF INDIRECT EMISSIONS TO GROUNDWATER

The site has been developed on a containment basis, hence controlling potential discharge to groundwater. The risk of leakage is mitigated by the following;

- The relative thickness of the low permeability boulder clays constitutes a natural effective barrier to downward groundwater migration.
- Groundwater resources within the granular horizons are confined under subartesian pressure with a net upward groundwater movement.
- Leachate levels are maintained below licence limits on site.
- Leachate is pumped from the cells, to treatment lagoon and tankered off site for treatment.

There were no direct discharges to groundwater or surface water. The volume of leachate transported off site to Drogheda wastewater treatment plant during the period January to December 2013 was 25,864 m<sup>3</sup>. A water balance calculation has been undertaken. This estimates the annual leachate production to be approximately 22,012 m<sup>3</sup> as discussed in Section 10.

## **15 ASSESSMENT OF THE FEASIBILITY OF THE UTILISATION OF LANDFILL GAS AS AN ENERGY RESOURCE**

Two 0.65 Mw engines have been installed at the facility to generate power to the national grid. These have been commissioned but are not yet connected to the grid. This is expected to be undertaken in April 2014.

## 16 MONTHLY WATER BALANCE CALCULATION AND INTERPRETATION

A water balance calculation has been undertaken and is included in Appendix F. This estimates the annual leachate production to be approximately 22,012 m<sup>3</sup>. The difference in actual and predicted quantities month to month may be partly due to the absorptive capacity of the waste, which determined the speed of percolation of rainwater through the wastes, actual rainfall was used for all areas and using worst case scenario for infiltration.

---

## **17 SCHEDULE OF ENVIRONMENTAL OBJECTIVES AND TARGETS FOR THE FORTHCOMING YEAR**

### **17.1 SCHEDULE OF ENVIRONMENTAL OBJECTIVES AND TARGETS FOR THE FORTHCOMING YEAR**

Objectives, targets and timescales for Whiteriver Landfill Site have been completed as part of the ISO14001 Environmental Management System. These are as follows:

- Reduce pressure on non-renewable fossil fuels used to generate electricity. Generation of electricity to the grid due to commence in April 2014.
- Minimise the release of landfill gases. Final capping works are being undertaken and this will be completed in June 2014.
- Update Closure, Restoration, Aftercare Management Plan (CRAMP) and agree with EPA

### **17.2 REPORT ON THE PROGRESS TOWARDS ACHIEVEMENT OF THE ENVIRONMENTAL OBJECTIVES AND TARGETS CONTAINED IN THE PREVIOUS YEARS REPORT**

Objectives, targets and timescales for Whiteriver Landfill Site were reviewed as part of the ISO14001 Environmental Management System as follows:

- EMP No: 1 Reduce pressure on non-renewable fossil fuels used to generate electricity. Project currently underway. Two 0.65 Mw generators have been installed. These have been commissioned but are not yet connected to the grid. This is expected to be undertaken in April 2014. .
- EMP No: 7 Comply with the relevant requirements of the Landfill Directive (1993/31/EC). Objective and Target has been compiled to reduce BMW to landfill. The total reported for 2013 was 21.72 % this was within the target limit of 47%. The site is now closed.
- EMP No: 8 Minimise the release of landfill gases. Final capping works are being undertaken and this will be completed in June 2014.
- EMP No: 10 Meet the requirements of the new Environmental Objectives (Groundwater) Regulations 2010.
- EMP No: 11 Enhance the Biodiversity of the site post closure. Greenbelt contractor was hired and works commenced Feb 2013. 6,000 trees were planted on the site in 2013.

## **18 FULL TITLE AND A WRITTEN SUMMARY OF ANY PROCEDURES DEVELOPED BY THE LICENSEE IN THE YEAR, WHICH RELATES TO THE FACILITY OPERATION**

Environmental Management Procedures have been developed as part of the ISO14001 Environmental Management System (EMS) for the purpose of maintaining and assessing the EMS. Operational procedures ensure that the routine operational tasks related to the environmental management of the facility are undertaken in a satisfactory manner as required to maintain effective control of the environmental aspects of the facility. This system is audited annually and is available for inspection on site. As part of the EMS procedures have been developed. There were no changes to the procedures during 2013.

## 19 REPORTED INCIDENTS AND COMPLAINTS SUMMARIES, CORRESPONDENCE TO/FROM EPA

In total 15 complaints were made in 2013 down from 156 in 2012. These mainly related to odour and are summarised in Table 19.1. These are available for inspection at Whiteriver Landfill Site.

**Table 19.1 Complaints Summary**

Month	Number of Complaints	Resolution Status
January	1	Closed
February	2	Closed
March	3	Closed
April	3	Closed
May	0	Closed
June	0	Closed
July	1	Closed
August	3	Closed
September	1	Closed
October	1	Closed
November	0	Closed
December	0	Closed

There were no incidents reported for 2013. A summary of non-compliances noted during Audits/Landfill Site Inspections undertaken during the reporting period by EPA are given in Table 19.2.

**Table 19.2 Summary of Non Compliances and Audit Observations noted during Audits/Landfill Site Inspections undertaken during the Reporting Period by EPA**

Date and Reference	Summary of Inspection Report/Audit
<p><b>05/11/2013</b></p> <p><b>W0060-03</b></p> <p><b>(LFG2013) JG</b></p>	<p>Landfill Gas Assessment Site Inspection Report Corrective Action</p> <p>The licensee should record adjustment to gas control value so that an accurate record is maintained and adjustments are recorded over time.</p>
<p><b>06/06/2013</b></p> <p><b>(W0060-03)</b></p> <p><b>AR13Im(e)</b></p> <p><b>Site Inspection Report</b></p>	<p>Site Inspection Report Inspection Corrective Action</p> <p><i>Odour &amp; Complaints and Incidents Management.</i></p> <p>The licensee is reminded of the requirement that activities shall be carried on in a manner such that emissions including odours do not result in significant impairment of the environment beyond the facility boundary</p> <p><i>Landfill Gas</i></p> <p>The licensee shall arrange for the completion of a representative landfill gas management field drawing. This drawing shall be maintained up to date and shall be made available to Agency personnel for inspection at all reasonable times.</p> <p>The licensee shall ensure gas balancing records are downloaded promptly following each gas balancing event. These records shall be maintained onsite and shall be routinely reviewed following each balancing event to ensure appropriate operation of the gas field. Recommendations for improvement of the gas balancing records were discussed as follows: - disconnected wells shall be recorded in the gas balancing records and justification for each disconnection shall be provided. - undertake periodic monitoring at individual gas wells in addition to monitoring undertaken at manifold boxes. - a reading of gas flow shall be taken at the flare during gas balancing events. - any corrective actions identified shall be documented and close out of these actions shall be recorded.</p> <p><i>Other issues</i></p> <p>The Environmental Document Management System shall be maintained up-to-date.</p>

## 20 REVIEW OF NUISANCE CONTROLS

The site ceased to accept municipal solid waste on the 30th of August 2013 and Incinerator Bottom ash on the 20th of December 2013. The site is now closed. Odour and dust monitoring is still being undertaken while capping works are being progressed. As part of the ISO14001 Environmental Management System an Odour Management Plan has been developed for the facility. This was updated in 2012. Total Volatile Organic compound monitoring has been undertaken at the site on a quarterly basis in 2013.

## 21 REPORT ON FINANCIAL PROVISIONS MADE UNDER THIS LICENSE, MANAGEMENT AND STAFFING STRUCTURE OF THE FACILITY AND A PROGRAMME FOR PUBLIC INFORMATION

Louth County Council being a local authority is able to provide the necessary finances to ensure the proper management development and restoration of Whiteriver Landfill Site.

Overall responsibility for the ongoing operations of the landfill site is held by a Senior Engineer assigned to the Environmental Section of Louth County Council. The site ceased to accept municipal solid waste on the 30th of August 2013 and Incinerator Bottom ash on the 20th of December 2013.

Management Structure for the closed site is as follows. This is the present status although it may be changed at a future stage.

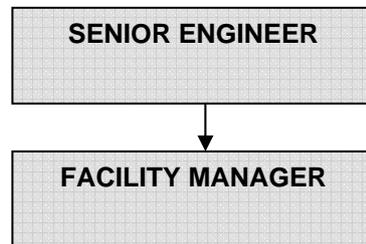

Figure 21.1 Management Structure at Whiteriver Landfill Site

## 22 OTHER INFORMATION

### 22.1 REPORT ON TRAINING OF STAFF TRAINING

No staff training was undertaken in 2012.

### 22.2 TANK, PIPELINE AND BUND TESTING AND INSPECTION REPORT

There are no tanks, pipeline or bund inspection undertaken on site.

### 22.3 UPDATES TO LANDFILL ENVIRONMENTAL MANAGEMENT PLAN (LEMP)

ISO14001 Environmental Management System was implemented in October 2009. This included a review of the Environmental Management Plan for the site. This was last reviewed in October/November 2010 and is available for inspection on site.

### 22.4 REVIEW OF ENVIRONMENTAL LIABILITIES

An Environmental Liabilities Risk Assessment (ELRA) has been completed for the site. This was submitted to EPA in June 2011. No reply from the EPA has been received to date.

### 22.5 REPORT ON WASTE RECOVERY

A report on the contribution by this facility to the achievement of the waste recovery objectives stated in Condition 2.3.2.1 and as otherwise may be stated in National and European Union waste policies has not been completed to date for the site. Louth County Council recovers construction and demolition waste arising from council project and other sources in the landfill operations. The material listed below were recovery on site as cover material and used in the construction of temporary roads in 2013.

**Table 22.1 Recovered Wastes**

Quantity waste recovered at the landfill (tonnes)	EWC code	Quantity waste recovered at the landfill (tonnes)
C&D	17 01 07	5,340
soils used as cover	17 05 04	5,805
Screened oversize material from composting of green waste	19 05 01	1,340
Wood chip	19 12 07	1,742
C&D Fines for cover material	19 12 12	16,385
<b>Total</b>		<b>30,611</b>

---

## **22.6 STATEMENT OF COMPLIANCE OF FACILITY WITH ANY UPDATES OF THE RELEVANT WASTE MANAGEMENT PLAN**

Under the European Communities (Waste Directive) Regulations 2011, all waste management plans were to be evaluated by 31 December 2012. This evaluation process has been completed and all ten evaluations recommended the development of replacement plans.

The number of waste management planning regions has been reduced from 10 regions to 3

(Connacht-Ulster, Eastern-Midland, and Southern) Louth is now part of the Eastern-Midland Region of which Dublin City Council is the lead authority. Notice of the intention to commence the preparation of New Regional Waste Management Plan was given on 10th October, 2013

## **22.7 STATEMENT ON THE ACHIEVEMENT OF THE WASTE ACCEPTANCE AND TREATMENT OBLIGATIONS**

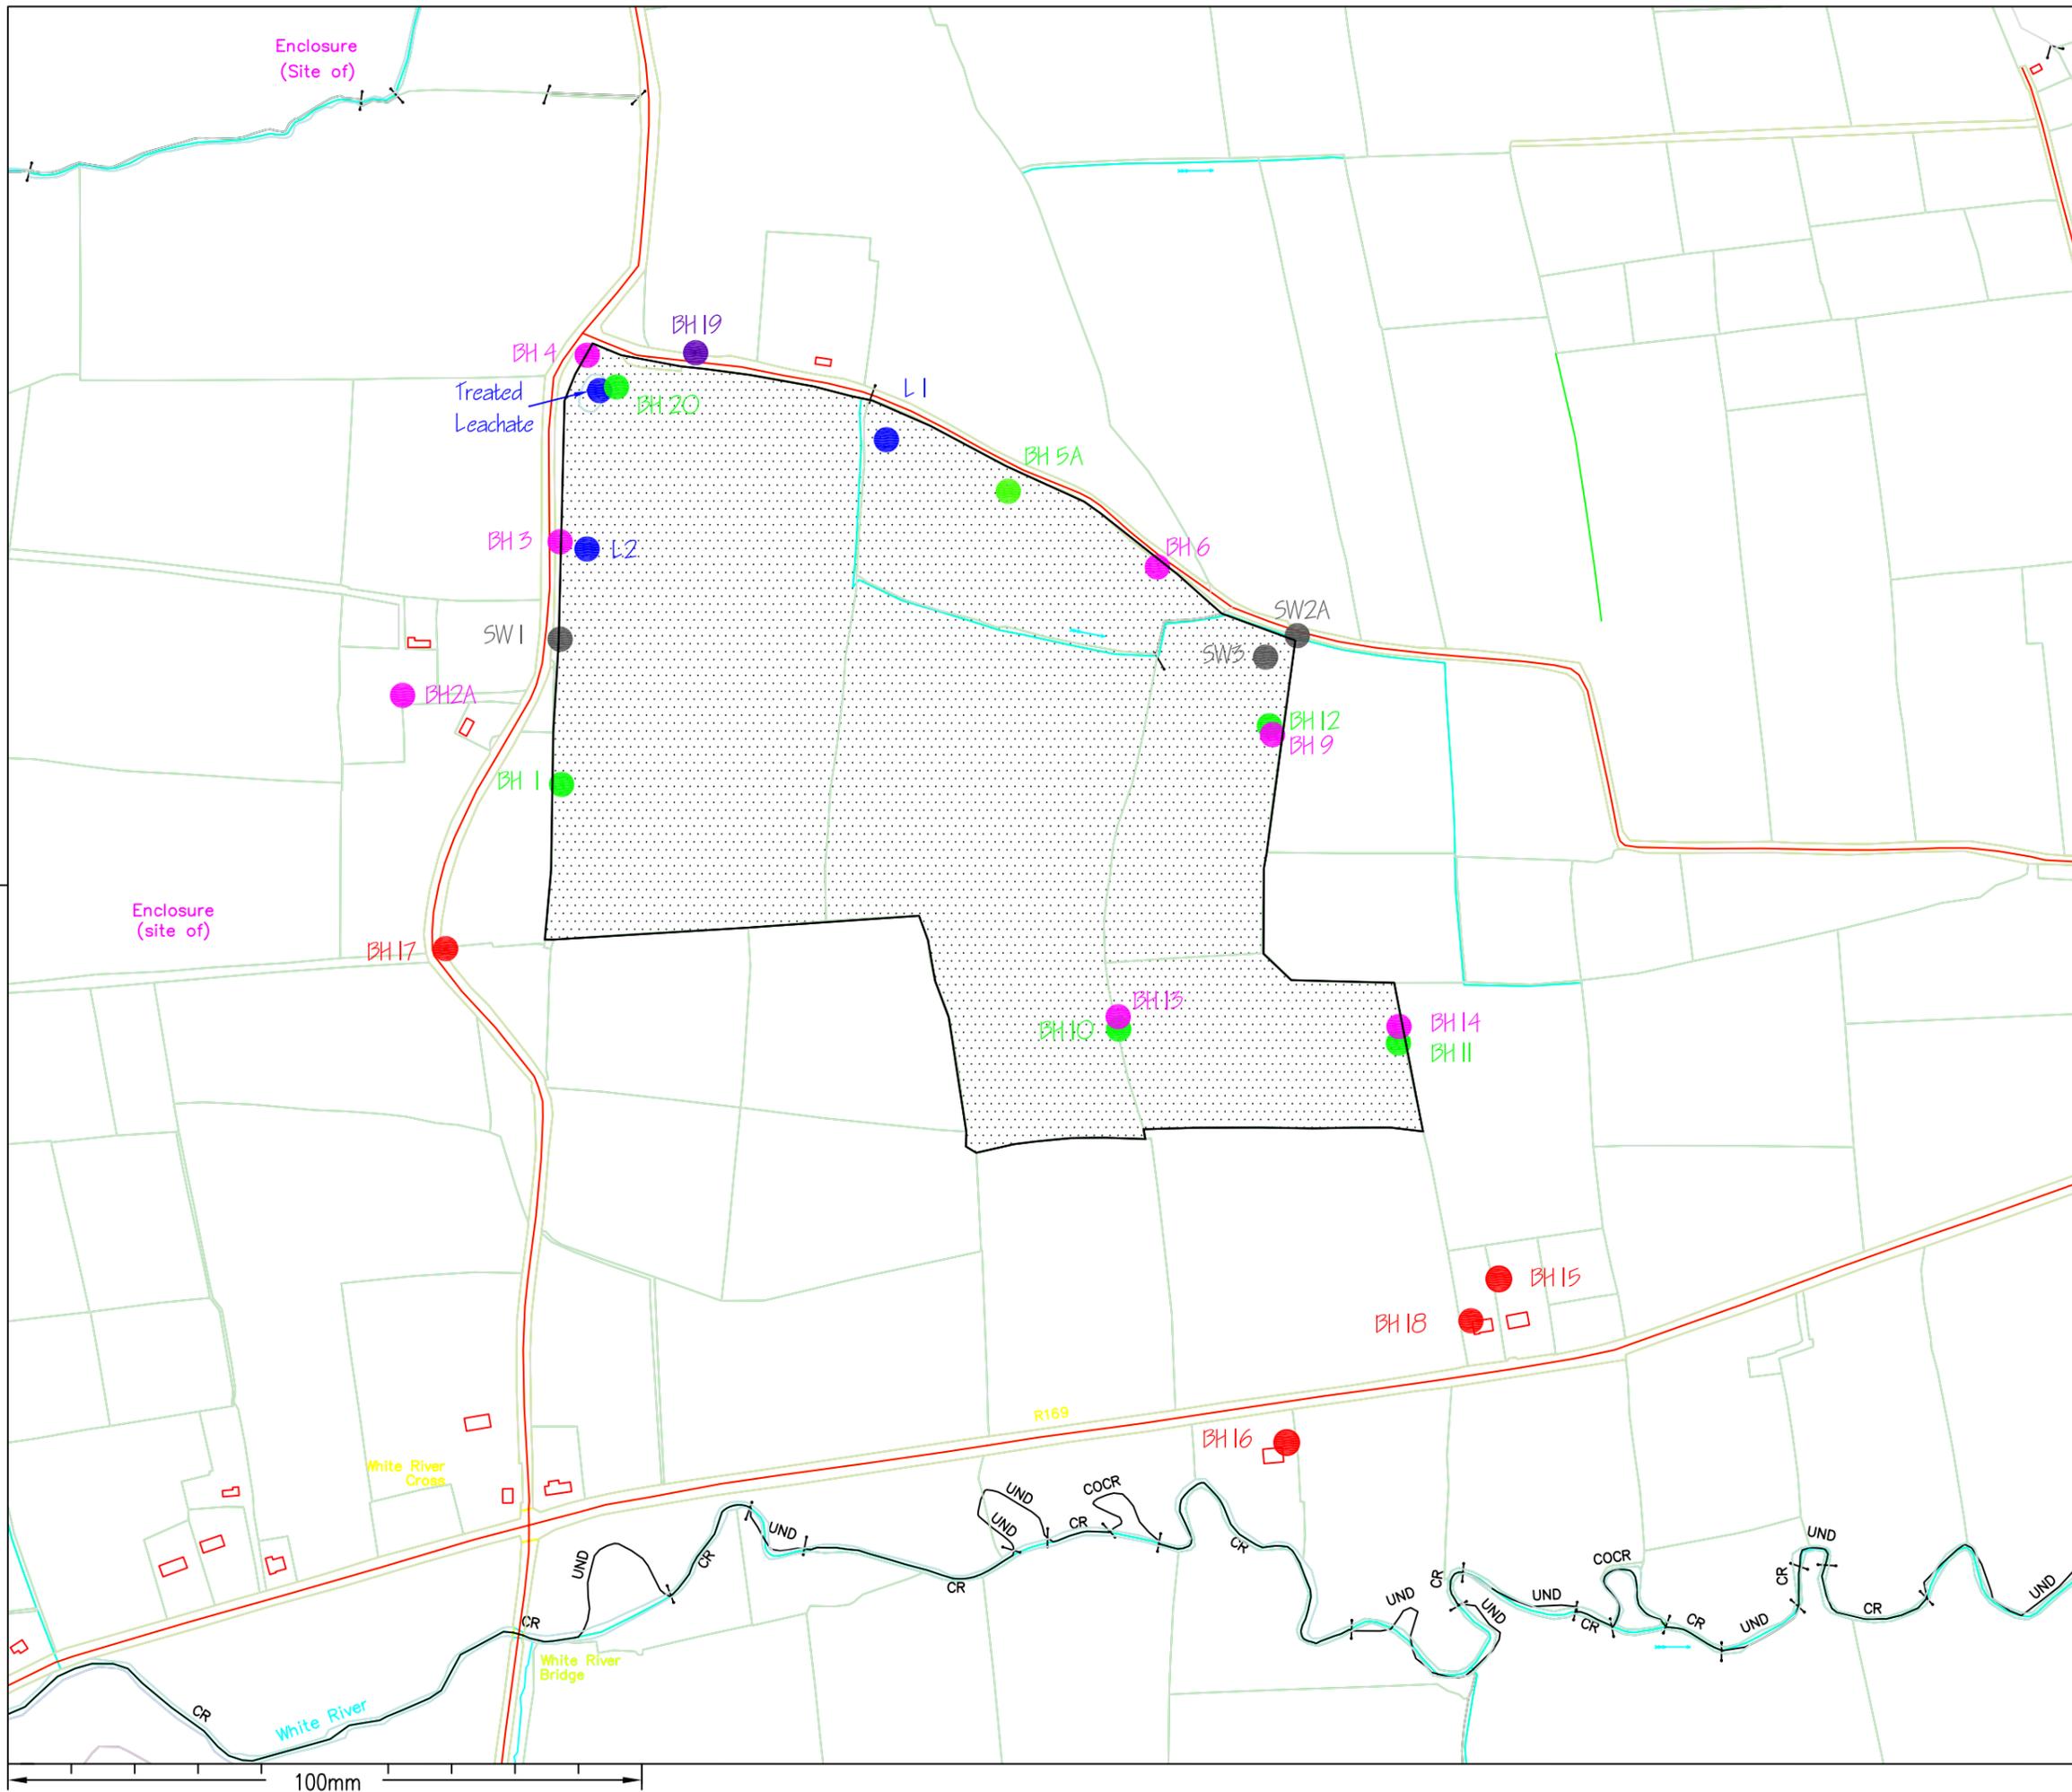

Whiteriver landfill site has completed quarterly Biodegradable Municipal Waste Reporting Landfill Submission Report to the EPA for 2013. The total reported for 2013 was 21.72 %. This is in compliance with Condition 5.15 where the maximum of 47% by weight of municipal solid waste (MSW) accepted for disposal to the body of the landfill shall comprise biodegradable municipal waste (BMW), measured on a calendar year basis.

## 1. FACILITY IDENTIFICATION

Parent Company Name	Louth County Council
Facility Name	Whiteriver Landfill Site
PRTR Identification Number	W0060
Licence Number	W0060-03

### Waste or IPPC Classes of Activity

No.	class name
3.5	Specially engineered landfill, including placement into lined discrete cells which are capped and isolated from one another and the environment.
3.1	Deposit on, in or under land (including landfill). Repackaging prior to submission to any activity referred to in a preceding paragraph of this Schedule.
3.12	
3.13	Storage prior to submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where the waste concerned is produced.
3.4	Surface impoundment, including placement of liquid or sludge discards into pits, ponds or lagoons.
3.6	Biological treatment not referred to elsewhere in this Schedule which results in final compounds or mixtures which are disposed of by means of any activity referred to in paragraphs 1. to 10. of this Schedule.
3.7	#####
4.10	The treatment of any waste on land with a consequential benefit for an agricultural activity or ecological system.
4.13	Storage of waste intended for submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where such waste is produced.
4.2	Recycling or reclamation of organic substances which are not used as solvents (including composting and other biological transformation processes).
4.4	Recycling or reclamation of other inorganic materials.
4.9	Use of any waste principally as a fuel or other means to generate energy.

Additional Data Requested from Landfill operators

For the purposes of the National Inventory on Greenhouse Gases, landfill operators are requested to provide summary data on landfill gas (Methane) flared or utilised on their facilities to accompany the figures for total methane generated. Operators should only report their Net methane (CH4) emission to the environment under T (total) KG/yr for Section A: Sector specific PRTR pollutants above. Please complete the table below:

Landfill: Please enter summary data on the quantities of methane flared and / or utilised	Whiteriver Landfill Site				
	T (Total) kg/Year	M/C/E	Method Code	Designation or Description	Facility Total Capacity m3 per hour
Total estimated methane generation (as per site model)	2707365.0	C	OTH	Gassim model	N/A
Methane flared	2589947.0	M	OTH	Flare records	0.0 (Total Flaring Capacity)
Methane utilised in engine/s	0.0				0.0 (Total Utilising Capacity)

AA-EQS means that for each representative monitoring point within the waterbody, the arithmetic mean of the concentrations measured over a twelve month monitoring period does not exceed the standard.  
EQS-MAC means that the measured concentration at any representative monitoring point within the water body must not exceed the standard.

**Assumptions**

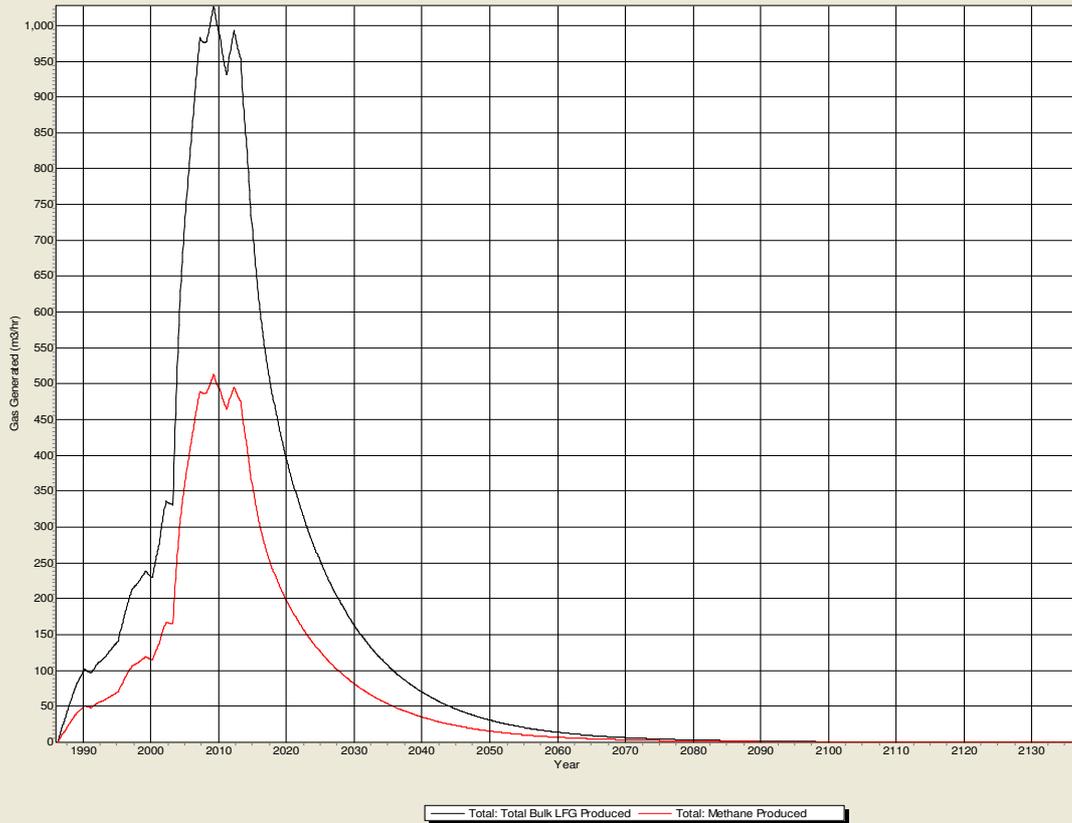

<b>IRCA</b>	Temporarily capped/restored area infiltration of rainfall estimated %	30%	%
	Permanent capped/restored area infiltration of rainfall estimated %	10%	%
<b>Absorptive Capacity</b>	waste density of 0.8 tonnes/m3. Estimated absorptive capacity (water per tonne waste before leachate is produced) t/m3	0.06	t/m3
	<b>Landfill areas/cells</b>		
	Area of landfill site restored (1,2)	41,000	m <sup>2</sup>
	Area of Phase 3	11,500	m <sup>2</sup>
	Area of Phase 1,2 and 3 remaining to be temp capped	7,000	m <sup>2</sup>
	Area of Phase 4, Cell 1A	2,190	m <sup>2</sup>
	Area of Phase 4, Cell 1	15,000	m <sup>2</sup>
	Area of Phase 4, Cell 2	8,000	m <sup>2</sup>
	Area of Phase 5, Cell 3A	7,974	m <sup>2</sup>
	Area of Phase 5, Cell 3B	7,180	m <sup>2</sup>
	Area of Phase 5, Cell 2A	13,761	m <sup>2</sup>
	Area of Phase 5, Cell 2B	5,795	m <sup>2</sup>
	Area of Phase 5, Cell 1A	10,083	m <sup>2</sup>
	Area of Phase 5, Cell 1B	323	m <sup>2</sup>
	Surface Area Leachate Lagoon	1,600	m <sup>2</sup>
<b>Rainfall</b>	Rainfall taken from on site	844.8	mm

## **APPENDIX G**

### **ESTIMATED ANNUAL GAS YIELD**

Total: Total Bulk LFG Produced / Total: Methane Produced  
Total: Total Bulk LFG Produced, Total: Methane Produced at 95%

— Total: Total Bulk LFG Produced — Total: Methane Produced
