

Facility Information Summary	
AER Reporting Year	2014
Licence Register Number	W0036-02
Name of site	Indaver Ireland Limited
Site Location	Tolka Quay Road
NACE Code	3821 and 3822
Class/Classes of Activity	3.11, 3.12, 3.13, 4.1, 4.13
National Grid Reference (6E, 6 N)	-6.20299 53.3521
<p>A description of the activities/processes at the site for the reporting year. This should include information such as production increases or decreases on site, any infrastructural changes, environmental performance which was measured during the reporting year <b>and an overview of compliance with your licence listing all exceedances of licence limits (where applicable) and what they relate to e.g. air, water, noise.</b></p> <p>In 2014, Indaver's waste transfer station provided temporary storage for incoming hazardous and non-hazardous waste, prior to onwards shipping from Ireland to mainly Europe for recovery, disposal and other treatment. There was an overall decrease in waste volumes handled compared to 2013 due to the reduction in the number of loads transiting the transfer station that now move directly to other outlets from the customer site. There was increased activity at the Solvent Recovery Facility due to the approval of an Irish outlet for high CV material. The repair of the surface water retention tank was carried out in 2014. Surface water can now be diverted to this tank when required by the conditions of the licence. There were no exceedances of licence limits for surface water (quarterly), groundwater, emissions to atmosphere, ambient air. In terms of noise monitoring, activities at the Indaver facility did not give rise to noise levels that exceed the permitted noise limit and no tonal or impulsive noise from site activities was recorded. However, two of the monitoring locations are prone to interference from road traffic and from operations at other facilities. No environmental complaints were recorded. There were four non-compliances and one compliance investigation in 2014. These were attributable to an unauthorised discharge that occurred in March 2014. Responses were provided to the EPA and are now closed out. There were three environmental incidents in 2014 and these were closed out.</p>
