

## **ATTACHMENT I1 – AIR QUALITY IMPACT**

Details of the existing environmental air quality around the proposed soil recovery facility at Calary Quarry and the potential impacts of emissions to air are provided in Chapter 8 of the Environmental Impact Statement which accompanies this waste licence application.

Of the potential polluting substances emitted to air listed in the Schedule to the Environmental Protection Agency (Licensing) (Amendment) Regulations 2004, the only pollutant likely to arise at Calary Quarry will be dust.

The impact assessment presented in the EIS concludes that as

- measures will be implemented to control dust rise and limit dust emissions at the recovery facility;
- emissions will ultimately be controlled by way of an EPA waste licence, and
- none of the habitats present within the potential zone of influence are considered to be particularly sensitive,

there will be no significant impact on human or ecological receptors as a result of any fugitive dust emissions from the proposed recovery facility.
