

## **E5. Noise Emissions**

Facility activities involve the use of plant and equipment that are sources of noise emissions. The sources of noise are the mobile grab and front loader used in the Materials Recovery building, the clamp used to handle the baled SRF in the open yard, the dust extraction system in the Materials Recovery building and the heavy goods vehicles that access the facility. The processing of the IBA will involve the use of hoppers, conveyors, magnets and mechanical screens that will be sources of noise.
