

Attachment F Control & Monitoring

Contingency Arrangements

The waste processing systems that are and will be employed at the facility are relatively simple and robust. A preventative maintenance programme will be implemented and critical spares kept on site in case of plant and equipment breakdown.

SEHL has prepared and adopted an Accident Prevention Policy (APP) and Emergency Response Procedure (ERP) for the facility. The APP addresses all potential hazards, with particular reference to the prevention of accidents that may cause damage to the environment. The ERP identifies all potential hazards at the site that may cause damage to the environment and also specifies roles, responsibilities and actions required to deal quickly and efficiently with all foreseeable major incidents and to minimise environmental impacts.

SEHL has prepared documented procedure on the handling and storage of potentially polluting substances used at the facility, e.g. oils. The procedure describes how filling the fuel storage tanks and refuelling/servicing the mobile plant should be carried out to minimise the risk of accidental spills and ensure that if these occur there is a rapid and effective response.

All site personnel and visitors to the site are obliged to comply with SEHL's safety guidelines. The guidelines regulate access to and from the site and traffic movement on the site. All site personnel are provided with and are obliged to wear the requisite personal protective equipment (PPE). PPE may include face masks, gloves, safety glasses, steel-toed footwear, overalls, reflective jackets and helmets.
