

Attachment H.3 Recovery and Disposal of Waste Generated at the Installation

Facility operations generate small quantities of office and canteen type wastes. SEHL implements a source segregation policy to maximise the recovery of potential recyclable materials from these wastes.

The plant and equipment are serviced off-site. Waste oils and batteries generated during maintenance are removed off-site for disposal/recovery at licensed treatment/recovery facilities.

The oil interceptor on the surface water drainage system is routinely cleaned and emptied and the contents removed off-site for disposal/treatment at an appropriately licensed facility. Sanitary wastewater is discharged to the Irish water mains sewer.
