

E.2 Emissions to Surface Water

The only emission to surface water from the facility is the outfall from the integrated constructed wetland (ICW) west of Building 3. Surface water run-off from the paved area is directed to the ICW after first passing thorough silt traps and an oil interceptor. The outfall from the ICW (SW-1) is to the land drain on the southern boundary. The emission does not contain any substances listed in the Schedule of EPA (Industrial Emissions) (Licensing) Regulations 2013 S.I. No. 137 of 2013.
