

## **E5. Noise Emissions**

Facility activities involve the use of plant and equipment that are sources of noise emissions. The existing sources of noise are the SRF processing line (shredder, separator, conveyors, trommel and baler) in Building 3, the C&D processing line (shredder, trommel, conveyors and crusher ) in Building 2, mobile grab and front loader and the heavy goods vehicles that access the facility. The processing of the ash will involve the use of hoppers, conveyors, magnets and mechanical screens.
