

## **Attachment H.2 Waste Prevention**

The facility is designed and operated to maximise the recovery of the materials accepted. As all of these materials are currently classified as waste the only opportunities for waste prevention relate to the small amounts of office and canteen waste generated in the office and welfare facilities.

There is the potential that certain types of paper and cardboard currently accepted could meet the 'end-of-waste' criteria at the locations they are generated. PANDA will engage with its customers to determine if this is feasible.
