1. INTRODUCTION

This is the 2016 Annual Environmental Report (AER) for the Rilta Environmental Limited (Rilta) Materials Recovery Facility (MRF) located at Unit 14-A1 Greenogue Business Park, Rathcoole, County Dublin. The report covers the period from the 1st January 2016 to the 31st December 2016. The content of the AER is based on Schedule E of the Waste Licence (W0185-01).

2. SITE DESCRIPTION

2.1 Site Location and Layout

The facility is located within an industrial estate approximately 2km east of Newcastle village and approximately 2.5km west of Rathcoole village. Rilta have been operating at the facility since 2009.

2.2 Waste Management Activities

During the reporting period the licence allowed Rilta to accept and process up to 60,000 tonnes of waste per annum, as set out in Appendix A and summarised below:

2.2.1 Waste Types & Processes

During the reporting period, the facility was licensed to accept the following waste categories and maximum quantities, as specified in Schedule A of the Licence: -

- Household Waste (7,000 tonnes)
- Commercial & Industrial Waste (15,000 tonnes)
- Construction & Demolition Waste (1,000 tonnes)
- Sewage Sludge (2,000 tonnes)
- Industrial Sludge (2,000 tonnes)
- Hazardous Waste (as listed in Table E.2.2 entitled 'Hazardous waste Types and Quantities' of the application (33,000 tonnes)

Licensed Waste Disposal Activities, in accordance with the Third Schedule of the Waste Management Act, 1996:

Class 7: Physico-chemical treatment not referred to elsewhere in this Schedule (including evaporation, drying and calcination), which results in final compounds or mixtures, which are disposed of by means of any activity referred to in paragraphs 1 to 10 of this Schedule (including evaporation, drying and calcination);

This activity relates to the shredding of waste materials, including, household hazardous waste containers and metals, plastics, card and paper. Physico-chemical treatment may be carried out on effluents to meet discharge criteria.

Class 11: Blending or mixture prior to submission to any activity referred to in a preceding paragraph of this Schedule;

This activity relates to bulking-up of waste on-site prior to shipment of waste for disposal offsite.

Class 12: Repackaging prior to submission to any activity referred to in a preceding paragraph of this Schedule;

This activity relates to the baling and repackaging of various waste types prior to disposal off-site.

Class 13: Storage prior to submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where the waste concerned is produced;

This activity relates to the storage of hazardous and non-hazardous waste at the facility prior to disposal off-site.

Licensed Waste Disposal Activities, Fourth Schedule of the Waste Management Act, 1996.

Class 2: Recycling or reclamation of organic substances, which are not used as solvents (including composting and other biological transformation processes);

This activity relates to the recycling of various organic substances including, wood, paper/cardboard, textile materials and vegetable oils.

Class 3: Recycling or reclamation of metals and metal compounds;

This activity relates to the dismantling, shredding, baling and recycling of various metal wastes.

Class 4: Recycling or reclamation of other inorganic materials;

This activity is limited to the reclamation of refrigerator gasses.

Class 11: Use of waste obtained from any activity referred to in a preceding paragraph of this Schedule:

This activity is to make provision for the acceptance on-site for transfer to an appropriate facility of waste that has been obtained from any activity referred to previously in the Schedule.

Class 12: Exchange of waste for submission to any activity referred to in a preceding paragraph of this Schedule;

This activity refers to the exchange of certain waste types and their packaging for further processing off-site

Class 13: Storage of waste intended for submission to any activity referred to in a preceding paragraph of this Schedule, other than temporary storage, pending collection, on the premises where such waste is produced;

This activity is limited to the storage of waste at the facility prior to off-site recovery.

3. EMISSION MONITORING

Rilta implements the environmental monitoring programme specified in the licence to assess the significance of emissions from the site activities. The programme includes surface water, wastewater, groundwater, noise and dust monitoring. The monitoring locations are shown on the plan in Appendix A. The monitoring results are submitted to the Agency at quarterly intervals. An overview of the results is presented in this Section.

3.1 Surface Water Monitoring

Surface water monitoring was carried out quarterly at one location (SW1). There are no emission limit values (ELVs) or trigger levels set in the Licence. Following a request from the Agency, trigger levels were developed in September 2015 in accordance with the Agency's guidance on setting of trigger levels for storm water discharges to off-site surface waters at EPA licensed IPPC & Waste facilities based on data from Q-1 2009 to Q-3 2015.

Table 3.1 presents the surface water monitoring results in 2016. All parameters are below their respective warning levels.

Table 3.1 Surface water Monitoring Results 2016: SW1

Parameter	Units	Q1	Q2	Q3	Q4	Warning Level	Action Level
pH	pH units	7.51	6.83	7.5	6.47	8.78	9.34
Conductivity	mS/cm	344	134	125	283	573	715
COD	mg/l	24	25	17	19	57	76

3.2 Groundwater Monitoring

There are two groundwater monitoring wells on site (GW-1 and GW-2). The locations are shown on the plan in Appendix 1. GW-1 is in the southern section of the site and is upgradient of GW-2, which is in the northern end of the site.

Monitoring is carried out quarterly. The parameters analysed quarterly are pH, electrical conductivity, temperature, dissolved oxygen, chloride, sulphate, Total Organic Carbon. Annual monitoring of List I/II Organic Substances and dissolved metals are carried out annually.

Tables 3.2 to Table 3.5 include the groundwater analytical results for GW-1 and GW-2 for each quarter. The tables included for comparison purposes the Interim Guideline Values (IGV) prepared by the Agency and the groundwater Threshold Values (TV) from the Groundwater Regulations 2010.

In Q1 there was a slight exceedance of the IGV for manganese in GW-1. There was exceedances of the IGV for chloride and electrical conductivity in GW-2 but the GTVs were not exceeded.

There were no further exceedances of the IGV or TVs throughout the year. There is no significant change in water quality between the upgradient and downgradient wells.

Table 3.2 Q1 Groundwater Monitoring Results (Annual Parameters)

Parameter	Unit	GW-1	GW-2	IGV	TV
Boron	µg/l	18	20	1,000	750
Cadmium	µg/l	<0.5	<0.5	5	3.75
Calcium	mg/l	124.9	181	200	-
Copper	µg/l	<7	<7	30	1,500
Iron	µg/l	<20	<20	200	-
Lead	µg/l	<5	<5	10	18.75
Magnesium	mg/l	8.9	14	50	-
Manganese	µg/l	511	40	50	-
Nickel	µg/l	3	<2	20	15
Potassium	mg/l	0.9	2.1	5	-
Zinc	µg/l	<3	<3	100	-
Sulphate	mg/l	96.81	185.52	200	187.5
Chloride	mg/l	17.5	48.4	30	187.5
Dissolved Oxygen	mg/l	6	7	NAC	-
Electrical Conductivity	µS/cm	673	1,118	1,000	875 – 1,875
pH	pH units	7.10	7.16	6.5-9.5	-
Total Organic Carbon	mg/l	<2	<2	NAC	-
VOC	µg/l	ND	ND	-	-
sVOC	µg/l	ND	ND	-	-

NAC – no abnormal change

ND – None Detected

NAC – no abnormal change

Table 3.5 Q4 Groundwater Monitoring Results

Parameter	Unit	GW-1 Up Gradient	GW-2 Down Gradient	IGV	TV
pH	pH Units	7.46	7.46	6.5-9.5	-
EC	µS/cm	700	525	1,000	875 – 1,875
Dissolved Oxygen	mg/l	8	8	NAC	-
Chloride	mg/l	17.4	8.3	30	187.5
Sulphate	mg/l	87.7	52.7	200	187.5
Total Organic Carbon	mg/l	<2	2	NAC	-

NAC – no abnormal change

3.3 Wastewater Monitoring

The facility is designed to collect wastewater (foul) from floor wash downs in the warehouse building and discharge to it to the municipal sewer that serves the industrial estate. However, as putrescible wastes are not accepted at the facility and floor wash downs are not required, there is no wastewater discharge to sewer and no requirement for monitoring to be carried out.

3.4 Noise Survey

An annual noise survey is carried out. This was carried out in August 2016. Daytime noise monitoring was carried out at approved noise monitoring locations as shown on the site plan in Appendix 1 and the results are summarised in Table 3.6. Site operations were not audible at any of the stations and were therefore lower than the 55dB daytime limit as specified in the licence.

Table 3.6 Day-time Noise Survey Results

Station	N1	N2	N3
Period	Daytime	Daytime	Daytime
Ambient $L_{Aeq\ 30\ min}$ (dB)	62	64	54
Facility specific $L_{Aeq\ 30\ min}$ (dB)	<52	<51	<<49
Tone objectively detected	x	x	x
Tone attributable to facility	x	x	x
Facility audibly tonal	x	x	x
Facility audibly impulsive	x	x	x
Facility rated $L_{Req\ 30\ min}$ (dB)	<52	<51	<<49
Limit (dB)	55	55	55
Compliance	✓	✓	✓

3.5 Dust Monitoring

Dust monitoring was carried out in August, September and October and the results are in Table 3.7. There was one exceedance of the dust deposition limit ($350\ mg/m^2/day$) set in the Licence. In September 2016 the result for D-3 ($1,591\ mg/m^2/day$) exceeded the dust deposition limit, however, the inorganic particulate fraction of the sample which is representative of site activities was $191\ mg/m^2/day$ which is below the limit. The sample was impacted greatly by the presence of vegetative growth (leaves, algae, etc.), which was not derived from site based activities. The exceedance was reported to the Agency.

Table 3.7 Dust Monitoring Results 2016

	April / May $mg/m^2/day$	July / August $mg/m^2/day$	September $mg/m^2/day$	Deposition Limit $mg/m^2/day$
D-1	20.81	7.24	113	350
D-2	15.29	10.77	123	350
D-3	33.27	4.99	1,591	350
D-4	42.41	3.03	108	350

4. SITE DEVELOPMENT WORKS

4.1 Engineering Works

There was no engineering works completed in 2016 and none are proposed for 2017.

4.2 Summary of Resource & Energy Consumption

Table 4.1 is a summary of the resource and energy consumption during the reporting period and a comparison with the consumption in 2015.

Table 4.1 Resources Used On-Site in 2015 & 2016

Resources	Quantities 2014	Quantities 2016
Road Diesel	1,220 litres	1360 litres
Electricity	56,100 KwH	64,000 KwH
Water	480m ³	840m ³

5. WASTE RECEIVED AND CONSIGNED FROM THE FACILITY

Table 5.1 shows the total quantities of waste received and Table 5.2 shows the total quantities of waste consigned from the facility in 2016. Table 5.3 shows the quantities of waste received and consigned in previous years. A breakdown of the waste types is provided in accordance with the List of Waste. A more detailed description of the wastes consigned and the waste destinations are provided in the PRTR submission in Appendix 2.

The total amount received in 2016 was 1,332 tonnes. The total amount consigned was 1,403.5 tonnes. The difference in waste received into and consigned is 71.533 tonnes. This relates to waste that was on-site at the end of 2016 and which was consigned in 2017. All the wastes consigned from the site went to authorised recovery and disposal facilities.

Table 5.1 Waste Received 2016

EWC	Description	Waste In
16 02 11*	WEEE	380.06
16 02 13*	Transformers	1269.88
16 02 14	Redundant Equipment	23.2

Table 5.2 Waste Consigned 2016

EWC	Description	Waste Out
13 03 07*	Mineral Based non-chlorinated insulating and heat transmission oils	212.14

Recovery Rate	98.03%	99.30%	99.86%	98.75%	100%

6. ENVIRONMENTAL INCIDENTS AND COMPLAINTS

6.1 Incidents

There was 1 notifiable environmental incident in 2016.

- 1) 17th November 2016 – Non-compliance of ELV for dust at monitoring point D-3. The total volume exceeded the ELV as a result of contamination of the sample by organic matter and not site derived inorganic matter. Agency notified following incident.

6.2 Register of Complaints

Rilta maintains a register of complaints received in accordance with Condition 10.4 of the waste licence. There were no complaints during the reporting period.

7. ENVIRONMENTAL DEVELOPMENT

7.1 Environmental Management Programme Report

RILTA has implemented an Integrated Management System (IMS) in accordance with the requirements of Occupational Health and Safety Assessment Series (OHSAS) 18001:2007 and International Standard Organisation (ISO) 14001:2004 in order to manage the Health, Safety and Environmental performance of their business and to control health and safety risk and to minimise their environmental aspects and impacts.

The IMS has been developed for the achievement of continual improvement taking into account the requirements of the Waste Licence Conditions. RILTA has prepared and effectively implement documented procedures and instructions in accordance with the requirements of both the OHSAS 18001:2007 and ISO 14001:2004. The facility was recertified in February 2015.

The schedule of the EMS Objectives and Targets, including their status for 2017 is included in Appendix 3.

7.2 Site Management Structure

Details of the site management structure are provided in Appendix 5.

7.3 Environmental Management Programme

The objectives that were achieved during this reporting period are outlined in Appendix 4.

7.4 Communications Programme

Rilta maintains a 'Public File' which contains all correspondence between Rilta and the Agency, all waste data and monitoring data as required by the licence. Opening Times for Inspection of Records are from 10 am – 4 pm. Visits to the site should be arranged in advance by ringing the Facility Manager at 01 401 8000

7.5 Nuisance Controls

Rilta has contracted an external vermin control company to carry out nuisance control at the facility.

8. OTHER REPORTS

8.1 European Pollutant Release and Transfer Register

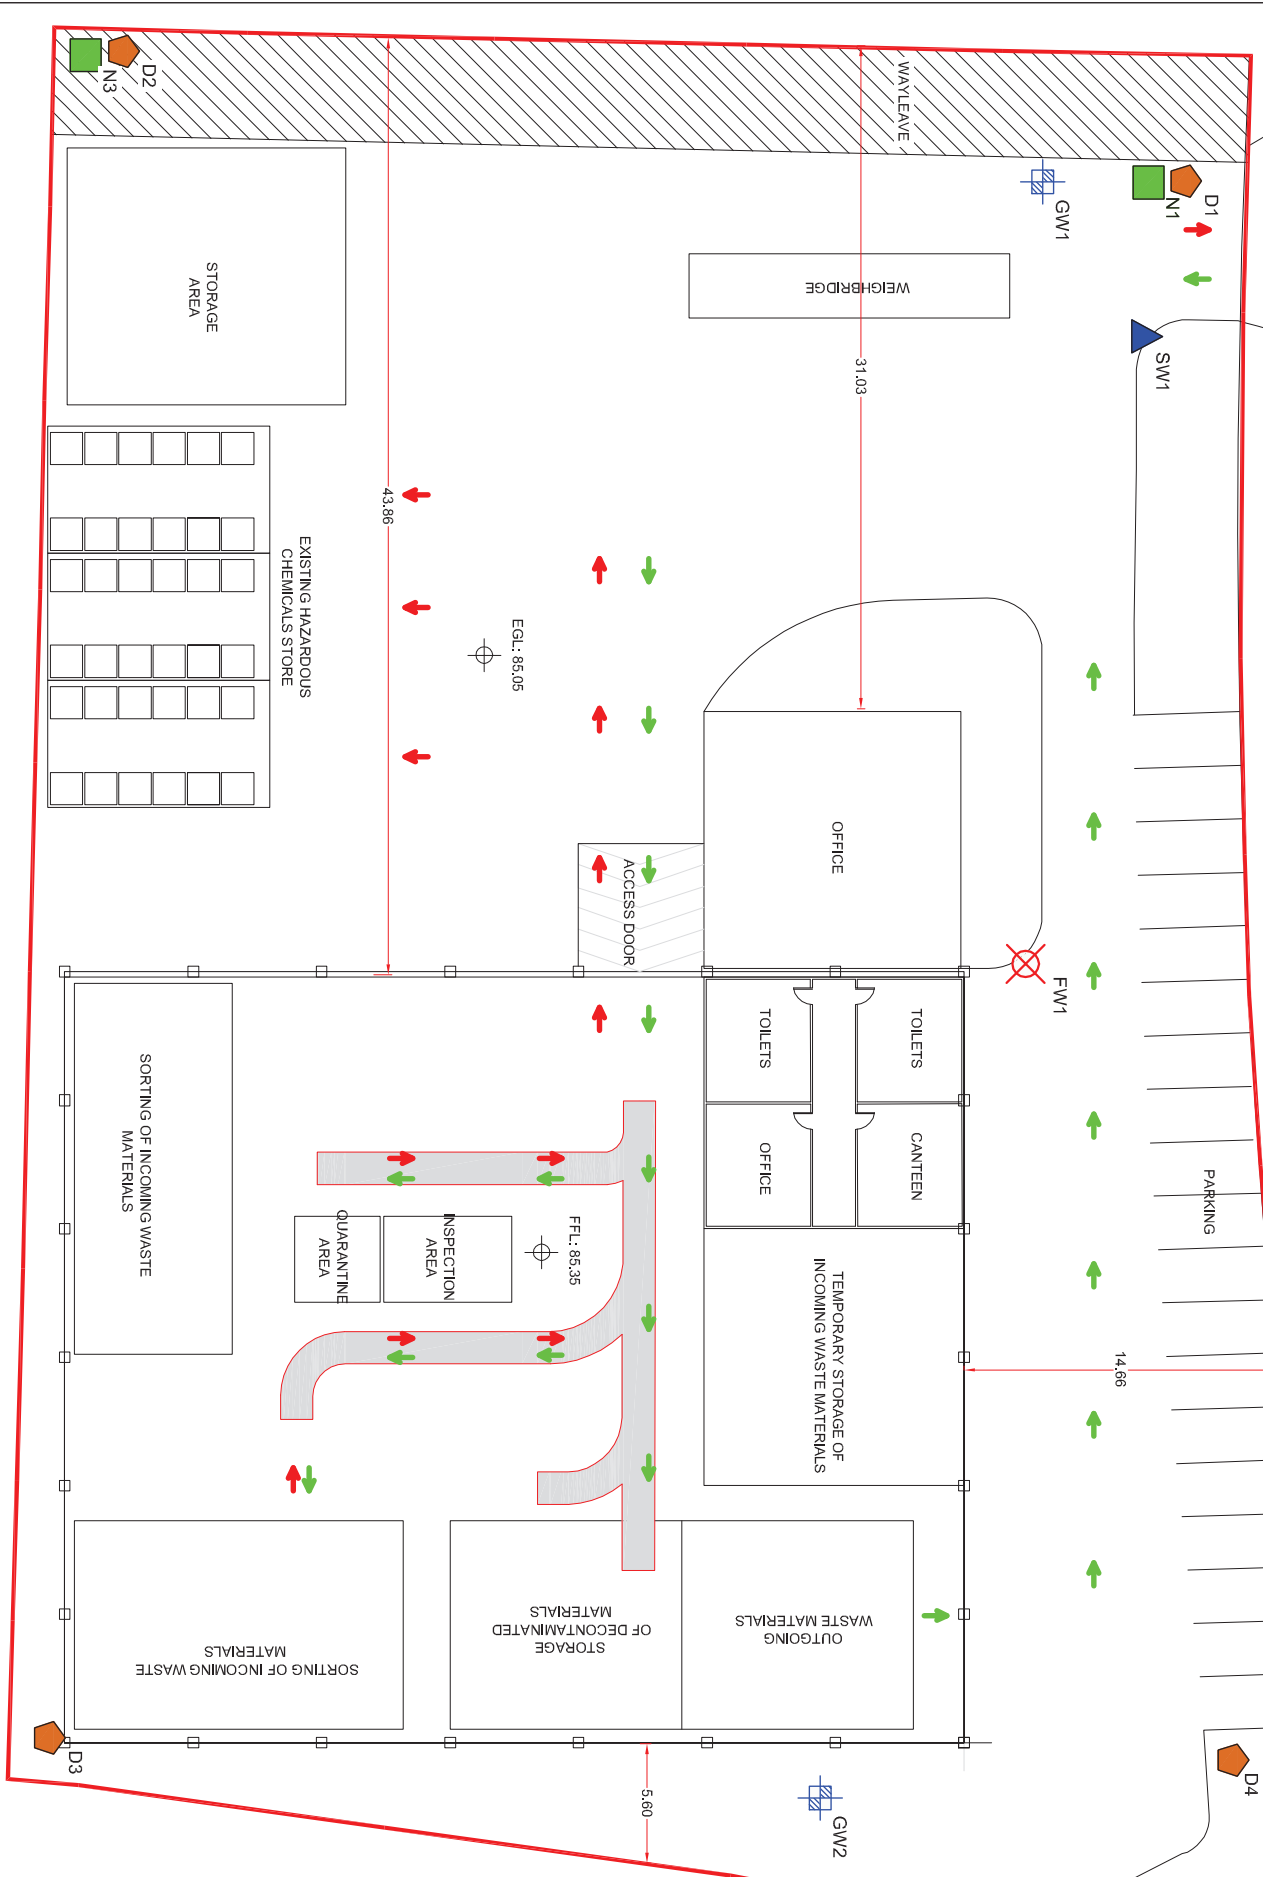

Under the European Pollutant Release and Transfer Register Regulation (EC) No. 166/2006 Rilta are required to submit information annually to the Agency. A copy of the information submitted to the Agency via the web-based data reporting system is in Appendix 2.

8.2 Bund Integrity Test Report

Bund integrity testing was completed in 2016. A copy of the report was submitted to the agency in 2016 and is included in Appendix 6.

Appendix B

Site 14A1 (Ref. Cedar Yard) - CCTV Drainage Inspection Report

1 INTRODUCTION

Tobin Consulting Engineers (hereafter referred to as TOBIN) have been commissioned by Rilta Environmental Ltd. to carry out Bund Integrity Testing at their facility at 14A1, Greenogue Business Park, Rathcoole, Co. Dublin under the requirements of the site's EPA Waste Licence (No. W0185-01).

TOBIN proposed that over a period amenable to facility operations hydrostatic testing, CCTV survey and structural survey would be carried out on the specified bunds and areas.

A CCTV survey of the site drainage was carried out by Rilta staff on 15/11/16. A structural survey of the Buildings outlined for assessment was carried out by a TOBIN Engineer on Friday, 25th November 2016.

Hydrostatic testing of a number of bunded areas and underground settlement tanks commenced on Saturday, July 23rd 2016 and concluded Monday, July 25th 2016. A second visit for testing of the underground bund at Site 14A1, Greenogue Business Park commenced Tuesday, 14th November 2016 and concluded on Thursday 16th November 2016 in order to carry out Testing of four indoor portable bunds.

Areas / Bunds for testing identified within Site 14A1, Greenogue Business Park include:

- Area / Bund No. 12: Large Warehouse
- Area / Bund No. 13: Storage Bay Portable Bunds (2No)
- Area / Bund No. 14: Processing Bay Portable Bunds (2No)
- Area / Bund No. 15: Outdoor Concrete Bund
- Area / Bund No. 16: Underground Concrete Bund

TOBIN carried out preliminary inspections of the bunds and areas listed above and made assessments as to the necessity/suitability of each for hydrostatic testing or structural assessment. A detailed bund location map (Figure 1) is contained in Appendix A.

2 METHODOLOGY

It was proposed that over a period when the facility was non-operational, liquid levels within the over ground bunds and underground tanks would be monitored, following preparatory works, for a three day period (preferably over a weekend). Any subsequent fluctuation in levels over this period would indicate if the integrity of each bund is intact.

2.1 METHODOLOGY FOR TESTING AT SITE 14A1, GREENOGUE BUSINESS PARK

A methodology for the testing of individual bunds and tanks at Site 14A1 is detailed below. The locations of the areas tested at Site 14A1 is shown in Figure 1 in Appendix A.

2.1.1 Large Warehouse Building (Area / Bund No. 12)

A structural survey was carried out by a TOBIN Engineer on the Internal Warehouse Building on Friday, 25th November, located as shown in Figure 1 of Appendix A. This building is designated as an area for the storage, inspection and processing of incoming electrical transformers. This survey consisted of a visual assessment of all walls, floors and ramps within the building.

2.1.2 Storage Bay – Portable Bunds (2 No.) (Area / Bund No. 13)

There are Indoor Portable Bunds/Tanks (2 No.) in the Storage Bay Building at Site 14A1, located as shown in Figure 1 of Appendix A.

It was proposed that over a period when the facility was non-operational, liquid levels within the internal storage bunds would be monitored for a three day period.

The locations of the storage bunds during the testing period and location of the main outdoor storage area are shown in Figure 1 attached.

Please Note: *During this 3 day test period the total drop in water level, after allowing for rainfall and evaporation, should not exceed 1/500th of the average depth of water or 10mm.*

2.1.3 Processing Area – Portable Bunds (2No.) (Area / Bund No. 14)

It was proposed to test the Indoor Portable Steel Bunds (2No.) in the Processing Bay Building at Site 14A1, located as shown in Figure 1 of Appendix A. The bunds were thoroughly cleaned out, with any debris and sludge removed from the bunds prior to testing.

Each bund was then incrementally filled with water to a level that is equal to 25% of the overall capacity of each bund. This was to represent the maximum capacity the bund will be required to hold.

When the bund was full to the required limit it was be allowed to sit for one day to allow the container/bund to absorb any initial water and reach an equilibrium state. After this 24hr period had lapsed, the level of water was measured at 24hr intervals over 3 days.

Further to this testing the bund was inspected by a structural engineer to ensure that any remedial work that is required has been carried out such as welding or repairing any cracks or faults to a satisfactory standard.

Please Note: *During this 3 day test period the total drop in water level, after allowing for rainfall and evaporation, should not exceed 1/500th of the average depth of water or 10mm.*

2.1.4 Outdoor Concrete Bund / Loading Bay (Area / Bund No. 15)

It was proposed to test the Outdoor Concrete Bund / Loading Bay at Site14A1, located as shown in Figure 1 of Appendix A. The bund was thoroughly cleaned out, with any debris and sludge removed from the bund prior to testing.

The bund was then incrementally filled with water to a level that is equal to 25% of the overall capacity of the bund. This was to represent the maximum capacity the bund will be required to hold.

When the bund was full to the required limit it was allowed to sit for one day to allow the container/bund to absorb any initial water and reach an equilibrium state. After this 24hr period had lapsed, the level of water was measured at 24hr intervals over 3 days.

Further to this testing the bund was inspected by a structural engineer to ensure that any remedial work that is required has been carried out such as protective coating applied or any cracks or faults repaired and sealed to a satisfactory standard.

Please Note: *During this 3 day test period the total drop in water level, after allowing for rainfall and evaporation, should not exceed 1/500th of the average depth of water or 10mm.*

2.1.5 Underground Concrete Bund (Area / Bund No. 16)

Testing was carried out on the Underground Concrete Bund over a 3 day period in July 2016. It was proposed to test the Underground Concrete Bund at Site14A1, located as shown in Figure 1 of Appendix A. The bund was thoroughly cleaned out, with any debris and sludge removed from the bund prior to testing.

The bund was then incrementally filled with water to a level that is equal to 25% of the overall capacity of the bund. This was to represent the maximum capacity the bund will be required to hold.

When the bund was full to the required limit it was allowed to sit for one day to allow the container/bund to absorb any initial water and reach an equilibrium state. After this 24hr period had lapsed, the level of water was measured using a data logger to record any changes in water level.

Further to this testing the bund was inspected by a structural engineer to ensure that any remedial work that is required has been carried out such as protective coating applied or any cracks or faults repaired and sealed to a satisfactory standard.

Please Note: *During this 3 day test period the total drop in water level, after allowing for rainfall and evaporation, should not exceed 1/500th of the average depth of water or 10mm.*

3.0 CONTROL

Due to the potential for evaporation in the settlement tanks/bunded areas, a control was put in place (note: where tanks are internal there is no risk of precipitation influencing levels). A container was filled to a specific level with liquid from the Underground Tanks. This control was left beside the internal tanks throughout the testing period. This control provides an indication of the evaporation rate active on the tanks and the influence of any rainfall during the testing period.

Due to the potential for evaporation and precipitation in the Outdoor Concrete Bund, a control was put in place. A container was filled to a specific level with water. This control was left beside the Outdoor Concrete Bund.

These controls provide an indication of the evaporation and precipitation rate active on the bunds both indoors and outdoors.

3.1 FAILURE

Should the structure not satisfy the test, remedial works will be recommended and carried out and the same procedure will be repeated.

3.2 WATER DISPOSAL

Any water used in this procedure will be disposed of through the surface water drainage system on site.

3.3 PROGRAMME FOR TESTING (SITE 14A1)

With the exception of the tests carried out in November for the internal bunds, it was proposed that all testing would be carried out over the same 4-day period¹ in July 2016.

- Day 1: TOBIN staff attended Site 14A1 on Friday, July 22nd 2016, before the testing commenced in order to assess the Underground Concrete Bund and Outdoor Concrete Bund for testing and to review the location of the Bunds to be tested (with Rilta staff) and the preparation of test areas including the addition of water to the bund as required for hydrostatic testing (with Rilta staff). Levels were taken by TOBIN staff.
- Day 2-4: TOBIN staff attended Site 14A1 on Saturday, 23rd July, Sunday, 24th July and Monday, 25th July to take levels at the Underground and Outdoor Concrete Bunds. Levels were taken at the same time each day, weather conditions noted and controls checked

A second visit was required to carry out hydrostatic testing on the Over indoor portable bunds at Site 14A1 in November 2016.

- Day 1: TOBIN staff attended Site 14A1 on Monday, 14th of November 2016 before the testing commenced in order to assess all Areas / Bunds for testing and to review the locations of the Areas / Bunds to be tested (with Rilta staff). Preparation of test areas including the addition of water to containers/bunds where required for hydrostatic testing (with Rilta staff). Levels were taken by TOBIN staff.
- Days 2-4: TOBIN staff attended site on Tuesday, November 15th, Wednesday, 16th November and Thursday, 17th November to take levels at each test location. Levels were taken at the same time each day, weather conditions noted and controls checked.
- A TOBIN Structural Engineer visited site to carry out a structural assessment of the bunds and buildings on Friday, 25th November.

¹ Where this was not practical for Rilta, an alternative programme for testing was agreed (all results are included herein).

4 RESULTS

4.1 HYDROSTATIC SURVEY RESULTS

Hydrostatic testing was carried out on the Bunded areas & Underground Storage Tanks from Friday, July 22nd to Monday, July 25th 2016, and for additional Indoor Portable Storage Bunds from Tuesday, 15th November to Thursday, 17th November 2016.

No fluctuation in liquid levels was noted in the bunds or tanks during the first monitoring period Day 1 to Day 2 (November 15th to 16th November 2016) and levels remained constant for the second monitoring period Day 2 to Day 3 (16th November to 16th November 2016). Results from the controls showed no variation and were consistent with readings from all storage tanks.

As no fluctuation was noted in liquid levels during the measurement period and the control remained constant, it is determined that all tested bunds and tanks are in good structural condition. No ancillary works are required for these bunds.

4.2 TESTING AT SITE 14A1, GREENOGUE BUSINESS PARK

Testing commenced 'as per methodology' on Saturday 23rd July 2016 and concluded on Monday, 25th of July 2016. A second visit was required to test the Indoor Portable Bunds bund. This test commenced on Tuesday, 15th November 2016 and concluded on Thursday, 17th November 2016. Measurements were recorded over three consecutive days and the results were analysed by TOBIN staff. No fluctuation in liquid level was noted at any of the monitoring locations, during any of the daily monitoring events (see results below). The controls for these assessments showed no change, remaining consistent with the results from the daily monitoring. See section 4.2.2 below for test results.

4.2.1 Large Warehouse Building (Area / Bund No. 12)

As per methodology a structural survey was carried out by a TOBIN Engineer on the Warehouse on Friday, 25th November 2016, located as shown on Figure 1 of Appendix A.

This area is generally used to store relatively dry materials. The construction is typical industrial ground floor construction with 6m x 6m concrete bays. There is a concrete upstand approx 100mm high around the perimeter of the area with block walls above. There is ramped access to the entrances and exits to the bund.

The floor slab and up-stand was generally found to be in good structural condition with no obvious defects. The ramps approaching the external dock – leveller have been damaged by the impact of

the vehicular movements. These require repair with a suitable repair mortar. The make-up of the joint filler material between the 6m x 6m concrete bays is unknown and maybe unsuitable to store the material required. It is recommended that these joints be re-sealed with a suitable sealant that capable of performing with aggressive materials.

4.2.2 Storage Bay - Portable Bunds (2No.) (Area / Bund No. 13)

Testing commenced 'as per methodology' on Monday, 14th November 2016. Measurements were recorded over three consecutive days and the results were analysed by TOBIN staff. No fluctuation in liquid level was noted at any of the indoor bund monitoring locations, during any of the daily monitoring events (see results below).

As no fluctuation was noted in tank liquid levels during the measurement period, the internal bunds are in good structural condition as detailed below.

Storage Bay Portable Bund No. 1:

As per methodology Bund No. 1 was filled with water to an appropriate level (110% tank volume) on Monday the 14th November 2016. A >24hr absorption period was observed (due to weekend period) to allow the bund walls to become saturated. The test commenced on Tuesday 15th November 2016. Table 4-7 below represents recorded water levels within the bund over the test period. Two levels were taken for each bund as there was a slight slant in some of the storage tanks.

Table 4-7 Storage Bay Portable Bund No. 1 Test Result

Measurement Location	Mon 14 th Nov	Tues 15 th Nov	Wed 16 th Nov	Thur 17 th Nov	Fluctuation	Pass / Fail
Storage Bay Portable Bund No. 1						
A, Front Left	23.1	23.2	23.2	23.1	-0.1cm	Pass
B, Front Right	23.6	23.6	23.6	23.6	0.0cm	Pass

D, Rear Right	23.4	23.4	23.4	23.3	-0.1cm	Pass

Testing at this location was not impacted by facility operations

Storage Bay Portable Bund No. 2:

As per methodology Bund No. 2 was filled with water to an appropriate level (110% tank volume) on Monday the 14th November 2016. A >24hr absorption period was observed (due to weekend period) to allow the bund walls to become saturated. The test commenced on Tuesday 15th November 2016. Table 4-8 below represents recorded water levels within the bund over the test

period. Two levels were taken for each bund as there was a slight slant in some of the storage tanks.

Table 4-8 **Storage Bay Portable Bund No. 2 Test Result:**

Measurement Location	Mon 14 th Nov	Tues 15 th Nov	Wed 16 th Nov	Thur 17 th Nov	Fluctuation	Pass / Fail
Storage Bay Portable Bund No. 2						
A, Front Left	24.2	24.2	24.2	24.2	0.0cm	Pass
B, Front Right	24.3	24.3	24.3	24.3	0.0cm	Pass

D, Rear Right	24.1	24	24	24	-0.1cm	Pass

Testing at this location was not impacted by facility operations.

4.2.3 Processing Area - Portable Bunds (2No.) (Area / Bund No.14)

As per methodology Area / Bund No. 14 was filled with water to an appropriate level (110% tank volume) on Monday the 14th November 2016. A >24hr absorption period was observed (due to weekend period) to allow the bund walls to become saturated. The test commenced on Tuesday 15th November 2016. Table 4-13 below represents recorded water levels within the bund and control over the test period. Various levels were taken for each bund as there was a variation in floor level in some of the bunds.

Table 4-9 **Bund / Area No. 14 Test Result**

Measurement Location	Tues 15 th Nov	Wed 16 th Nov	Thur 17 th Nov	Fluctuation	Pass / Fail
Main Bund					
A, Front Left	29.4cm	29.4cm	29.3cm	-0.1cm	Pass
B, Front Right	29.6cm	29.6cm	29.6cm	0.0cm	Pass
C, Rear Right	28.6cm	28.6cm	28.5cm	-0.1cm	Pass

Processing Bund					
E, Front Left	11.7cm	11.7cm	11.7cm	0.0cm	Pass
F, Front Right	9.9cm	9.9cm	9.9cm	0.0cm	Pass

Testing at this location was not impacted by facility operations.

4.2.4 Outdoor Concrete Bund (Area / Bund No.15)

As per methodology Area / Bund No. 15 was filled with water to an appropriate level (110% tank volume) on Friday 22nd July. A >24hr absorption period was observed (due to weekend period) to allow the bund walls to become saturated. The test commenced on Saturday 23rd July. Table 4-14 below represents recorded water levels within the bund and control over the test period. Various levels were taken for each bund as there was a variation in floor level in some of the bunds.

Table 4-14 Bund / Area No. 15 Test Result

Measurement Location	Sat 23 rd Jul (Top of bund to water level)	Sun 24 th Jul (Top of bund to water level)	Mon 25 nd Jul (Top of bund to water level)	Fluctuation	Pass / Fail
A, Front Right	90cm	90cm	90cm	0.0cm	Pass
B, Rear Right	93cm	93cm	93cm	0.0cm	Pass
C, Rear Centre	113cm	113cm	113cm	0.0cm	Pass
D, Rear Left	94cm	94cm	94cm	0.0cm	Pass
E, Front Left	95cm	95cm	95cm	0.0cm	Pass

Testing at this location was not impacted by facility operations.

4.2.5 Underground Concrete Bund (Area / Bund No.16)

As per methodology Area / Bund No. 16 was filled with water to an appropriate level (110% tank volume) on Friday 22nd July 2016. A >24hr absorption period was observed (due to weekend period) to allow the bund walls to become saturated, a data logger was then placed in the underground concrete bund. The test commenced on Saturday 23rd July. Table 4-15 below represents recorded change in water levels within the bund and control over the test period.

Table 4-15 Bund / Area No. 16 Test Result

Testing at this location was not impacted by facility operations.

No fluctuation in liquid levels was noted in the bunds or tanks during the first monitoring period Day 1 to Day 2 (November 15th to 16th November 2016) and levels remained constant for the second monitoring period Day 2 to Day 3 (16th November to 16th November 2016). Results from the controls showed no variation and were consistent with readings from all storage tanks.

As no fluctuation was noted in liquid levels during the measurement period and the control remained constant, it is determined that all tested bunds and tanks are in good structural condition. No ancillary works are required for these bunds

5 CCTV

5.1 CCTV SURVEY

A CCTV drainage inspection was carried out on 5th of December 2016 on behalf of Rilta Environmental Ltd. The Inspection Report is included in Appendix B attached.

It was apparent from the CCTV camera inspection that the drainage system is generally in good condition, with some area requiring attention. A summary of defects and recommended remedial works can be found on the final page of Appendix B.

6 CONCLUSION

The assessment of the bunds / areas after CCTV survey, structural and hydrostatic testing is as follows:

Areas / Bunds for testing identified within Site 14A1, Greenogue Business Park include:

- Area / Bund No. 12: Large Warehouse = **PASS**
- Area / Bund No. 13: Storage Bay Portable Bunds (2No) = **PASS**
- Area / Bund No. 14: Processing Bay Portable Bunds (2No) = **PASS**
- Area / Bund No. 15: Outdoor Concrete Bund = **PASS**
- Area / Bund No. 16: Underground Concrete Bund = **PASS**
-

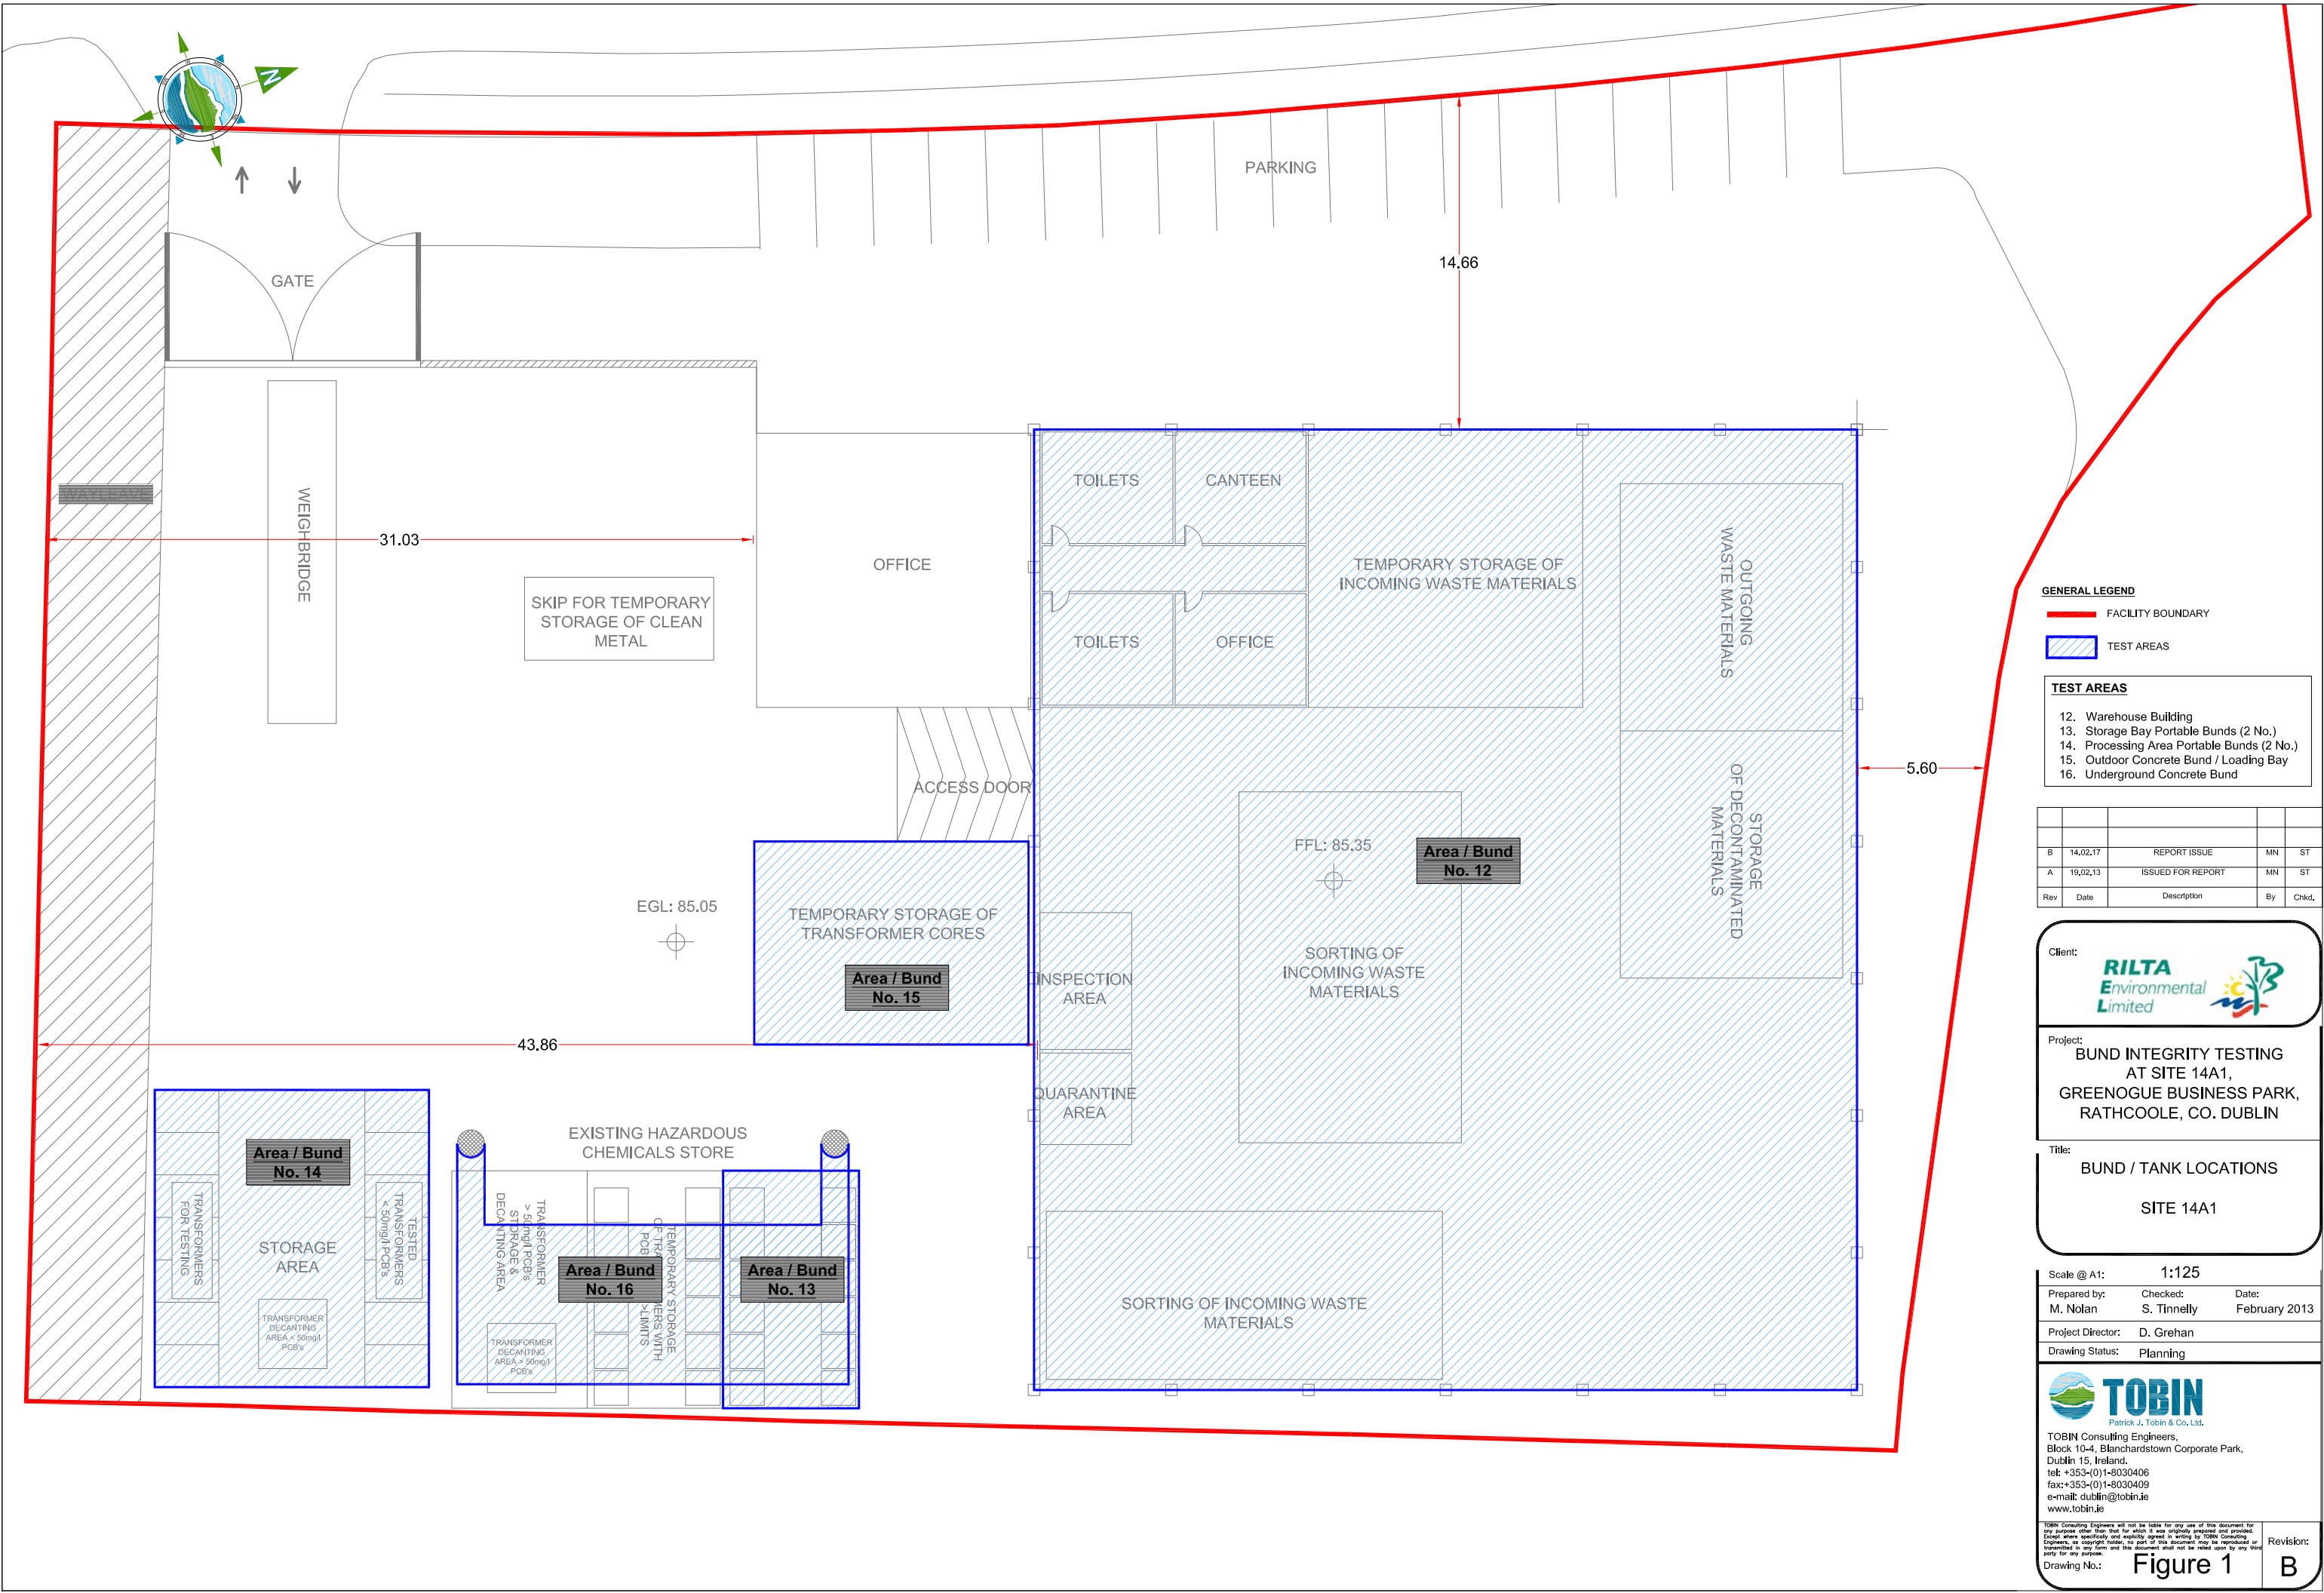

CCTV Survey = Pass (Remedial works recommended)

ONSITE DRAINAGE – SUMMARY OF DEFECTS

**PLEASE REFER TO THE SITE PLAN OVERLEAF*

It was apparent from the CCTV camera inspection that the drainage system is generally in good condition, with some area requiring attention.

For any of the places where a seal ring was found to be intruding, a structural patch lining of all defective sections is recommended in order to reinstate the drainage lines to a watertight condition. Other drainage line defects have been itemised below.

Foul Line

Drainage line: F6 – F4

<i>Location</i>	<i>Defect</i>
8.30m	Multiple cracks in the line. Recommendation repair by installation of liner.
14.30m	Settled deposits in the line. Assumed to be a lump of concrete from the building manufacture. Recommend robotic cutter to break up concrete and the line be flushed.

Surface Water Line

Drainage Line: AD – Sump

<i>Location</i>	<i>Defect</i>
0.60m	Roots located at the end of the pipe at the ACO Drain. Recommend root cutter to dislodge roots and liner to repair line.

Drainage Line: S1 – OS

<i>Location</i>	<i>Defect</i>
14.00m	A steel bar is protruding through the drain wall. Recommend that a robotic cutter cuts the steel bar and that the line is repaired by installation of a liner.

Drainage Line: S16 – S7

<i>Location</i>	<i>Defect</i>
15.40m	Joint displacement. A structural patch liner is required on this defective section in order to bring it to a watertight condition.
