Re: Declan Sullivan Licence Application Reg. No. P1065-01

Dear Elizabeth

I refer to Agency correspondence of 23rd November last. Please find the response to the issues raised outlined below;

1 Water Supply

- Current water Usage = 600-650 m3/annum
- Water Scheme = Lough Eigish / Kilkitt Water Scheme
- There is no wells within the site boundary.

2 Storm Water

It is intended there will only be one storm water discharge point, however as same can only finally be confirmed upon.

Existing/proposed storm water discharge is direct to watercourse. In line with recent Licenses issued same will be reviewed for a period of 12 months upon completion of all works and any requirement for a soak pit/silt trap will be assessed thereafter.

The final location and co-ordinates of proposed discharge point SW - 1, is expected to be as per the enclosed site plan, however same can only be confirmed upon installation.

Proposed co-ordinates E270955, N3161878

No revisions are required to the non-technical summary as a result of this additional information. Enclosed find one original and one hardcopy of this information plus two copies on CD.

If you require any further information please contact this office.

Yours sincerely,

Paraic Fay B.Agr Sc.
