

Industrial Emissions Licence Application

Connolly's RED MILLS

Application Ref. – LA001443

Section 2.5 – Fit & Proper Person

Technical Knowledge

The Industrial Emissions Licence Application is being made by Connolly's Red Mills which is an established high quality animal feed producer. The facility has been in operation for over 100 years and employs a range of qualified managers, maintenance technicians and site operatives.

The main contact for the licence application is Eugene Brennan who is the Nutritional Support Manager at the site. Eugene has a Bachelors Degree in Agricultural Science and has been employed at the Connolly's Red Mills site for 27 years and has an intimate knowledge of the mill process. Eugene also manages the environmental aspects of the site including organising surface water sampling and general environmental management at the site.

All maintenance staff must have completed an appropriate level of training (e.g., City and Guilds or an appropriate apprenticeship) to be considered to have the appropriate technical knowledge to complete maintenance works on site.

All site operatives receive on-site training to ensure that they are competent to operate site equipment in a safe and competent manner. Many of the site operatives have been employed at the Connolly's Red Mills site for a number of years and have extensive experience in the various aspects of the feed mill processes.
