Facility Information Summary	y
AER Reporting Year	2017
Licence Register Number	W0229-01
Name of site	Advanced Environmental Solutions (AES) Ireland Ltd.
Site Location	Ballygillane Big, Ballyknockan, St. Helens, Kilrane, Rosslare Harbour,
NACE Code	3821
Class/Classes of Activity	3,13, 3.11, 3.12, 4.13, 4.2, 4.3, 4.4
National Grid Reference (6E, 6 N)	-6.34359, 52.2398
A description of the activities/processes at the site for the reporting year. This should include information such as production increases or decreases on site, any infrastructural changes, environmental performance which was measured during the reporting year <b>and an overview of</b> <b>compliance with your licence</b> <u>listing all</u> <u>exceedances of licence limits (where</u> <u>applicable) and what they relate to e.g. air,</u> <u>water, noise.</u>	Waste activities did not change significantly in this reporting year (2017). Waste is accepted to site as per the sites Waste Licence (W0229-01). Waste activities at the site include temporary storage of wastes, sorting of waste to ensure correct segregation, and baling of recyclables (e.g. cardboard, plastic). There were no major infrastructure changes to the facility during 2017. All waste processing occurs indoors. There were no exceedences of licence limits for either dust or noise at NSLs during 2017. There are no specified emission limits for surface waters in Waste Licence (W0229-01).

# Declaration:

All the data and information presented in this report has been checked and certified as being accurate. The quality

of the information is assured to meet licence requirements.

### Licensed Emissions to water and /or wastewater(sewer)-periodic monitoring (non-continuous)

3 Was there any result in breach of licence requirements? If yes please provide brief details in the comment section of Table W3 below		ELV do not apply to the licence. The results have been compared against EQS for surface water.SW-1 is an upstream sampling location and so the Suspended Solids result recorded during 2017 are not as a result of onsite activity. It is felt that the elevated readings at SW-3 could be due to sediment disturbance during sampling as the water levels are extremely low at this sampling location and it is difficult to obtain the required sample volume without disturbance during the sediment at the base of the stream.
Was all monitoring carried out in accordance with EPA guidance and checklists for Quality of Aqueous Monitoring Data Reported to the EPA? If no please detail what areas         External /Internal           4         require improvement in additional information box         checklist         results checklist	Yes

Additional Data Requested from Land	fill operators											
For the purposes of the National Inventory on Greenhouse Gases, landfill operators are requested to provide summary data on landfill gas (Mothane) flared or utilised on their facilities to accompany the figures for total methane generated. Operators should only report their Net methane (CH4) emission to the environment under T(total) KG/yr for Section A: Sector specific PRTR pollutants above. Please complete the table below:												
Advanced Environmental Solutions (Ireland) Limited (Wexford)												
Please enter summary data on the quantities of methane flared and / or utilised			Meth	od Used
