APPENDIX 2

Procedures List

1. INTRODUCTION

This is the 2017 Annual Environmental Report (AER) for the Starrus Eco Holdings Ltd (SEHL), Materials Recovery & Transfer facility (MRF) at Deep Water Quay, Sligo. It covers the period from the 1st January 2017 to the 31st December 2017.

The content is based on Schedule B of the Industrial Emissions Licence (Reg. No. W0058-01) and the report format follows guidelines set in the "Guidance Note for Annual Environmental Report" issued by the Environmental Protection Agency (Agency)¹. Account is also taken of the AER Draft Guidance Document and AER Information Templates issued by the Agency in January 2012².

_

¹ EPA (Environmental Protection Agency) 1999 Waste Licensing – Draft Guidance on Environmental Management Systems and Reporting to the Agency

² EPA (Environmental Protection Agency) 2012 Draft AER Guidance Document

2. SITE DESCRIPTION

2.1 Site Location and Layout

The installation is located at Deepwater Berths Road, approximately 1.5 km northwest of Sligo town centre and 1 km from a relief road linking the N4 to the N15.

The licensed area, which encompasses approximately 11,000 m² and is accessed off the Deepwater Berths Road, is occupied by one waste transfer building, site offices, open yard areas and a civic amenity area.

The main building encompasses approximately 2,322 m² and is divided into three bays. The site offices, which are located beside the main entrance, comprise a two storey building encompassing approximately 84 m². The north-western yard is paved with concrete and provides access to the waste processing building. The south-eastern yard is also paved and comprises the civic amenity area and an open paved yard area.

2.2 Waste Management Activities

The installation is licensed to accept 100,000 tonnes per annum of household waste, commercial waste, industrial non-hazardous waste and construction and demolition waste for processing and/or transfer for disposal or recovery.

2.2.1 Waste Types

The installation is licensed to accept the following waste types: -

- Household (41,400 tonnes);
- Commercial (4,600 tonnes);
- Industrial Non-hazardous (45,000 tonnes);
- Construction & Demolition (C&D) (9,000 tonnes);

No hazardous wastes or liquid waste are accepted.

Waste bulking and segregation take place inside the waste transfer building, as specified in Condition 5.1 of the Licence and includes:

- Segregation of recyclable material (paper, cardboard, plastic, wood, aluminium cans);
- Baling of segregated materials;
- Sorting and segregation of C&D waste;
- Bulking up of Municipal Solid Waste;
- Transfer of recovered and residual materials to appropriately licensed recycling, recovery and disposal outlets.

Household Waste

Source segregated household dry recyclables are baled and stored prior to transfer to permitted/licensed off-site recycling facilities. In 2016 residual or black bin household waste was baled and exported for recovery. This activity has now ceased and instead the material is bulked for onward transport to 3rd party sites.

Commercial and Industrial Waste

Both mixed and segregated commercial waste is collected from commercial outlets. Commercial waste containing many recyclable waste streams (paper, cardboard, glass, metal, green waste and wood) is delivered to the installation by both permitted third party hauliers and by SEHL vehicles. Plastic, card and paper are baled and stored prior to transfer to a suitable permitted/licensed off-site recycling outlet. Biodegradable wastes that are suitable for composting are sent to an offsite authorised composting facility. The remaining non-recyclable material is bulked and sent to appropriately licensed landfills/recovery facilities

C&D Waste

Waste loads include mixed construction and demolition wastes and soil and stone. The material arrives in skips of varying sizes. The waste loads are inspected and then bulked. The majority of the incoming material is recovered and sent off-site either for re-use or recycling at authorised facilities. The non-recyclable elements are transferred to a licensed landfill.

Civic Amenity Area

The civic amenity area is located to the south-east of the waste transfer building and has its own dedicated entrance for members of the public. There are a number of dedicated closed skips for MSW, dry recyclables (cardboard, plastics, metals, papers etc) and WEEE.

2.2.2 Plant List

A list of the plant in use at the installation is given in Table 2.1. The plant provides 100% duty and 50% standby for waste processing.

Table 2.1 Plant List – 2017

No.	Plant	Model	Operational Capacity	Standby Capacity
1	Baler	Boa	7t/hr	7/t/wk
1	Paper Shredder	Alleghney	500kg/hr	500kg/hr
1	Hook Lifter	Scania	65hr/wk	-
1	Loading Shovel	Caterpillar 938G	70t/hr	-
1	Fork Lift	Yale x2	65hr/wk	-
1	Grab	Fuchs MHL340	25t/hr	-
1	Weighbridge	Avery Weightronic	46hr/wk	-

3. EMISSION MONITORING

SEHL implements a comprehensive environmental monitoring programme to assess the significance of emissions from site activities as per Schedule E of the Waste Licence. The programme includes surface water, foul water, groundwater, noise, landfill gas and dust monitoring. In November 2016, the Agency notified SEHL that dust monitoring would no longer be required at the installation. The monitoring locations are shown on Figure 3.1. The monitoring results are submitted to the Agency at quarterly intervals. An overview of the monitoring conducted in 2017 is presented in this Section.

3.1 Surface Water Monitoring

Condition 9.2 and Schedule E of the Licence requires quarterly monitoring at one surface water emission point (SE-2) to the Garvogue River. The range of analysis includes pH, electrical conductivity, Chemical Oxygen Demand (COD), Biological Oxygen Demand (BOD), ammoniacal nitrogen, chloride, surfactants, total suspended solids (TSS), mineral oils, and oils, fats and greases. The results, which are shown on Table 3.1, indicate the discharge is generally of good quality. There was one exceedance of the emission limit for TSS in March 2017.

Following an assessment of the surface water system it was found that SE-2 only served the north-western yard. A second discharge point to the Garvogue was identified which serves the south eastern yard and this emission point, labelled SE-3, was added to the monitoring schedule in Q2 and Q3 2015. Drainage works carried out at the site between 02/10/15 and 20/11/15 included the diversion of storm water run-off from the south eastern yard to the foul sewer. As a result monitoring at point SE-3 is no longer required.

Table 3.1 Surface Water Results for 2017

Parameter	Units	Q1	Q2	Q3	Q4	Emission Limit (Grab Sample)*
pН	pH units	6.63	7.21	7.37	7.45	6 – 9
Chloride	mg/l	21	14.8	15.6	14.9	N/A

COD	mg/l	16	7	<7	17	N/A
BOD	mg/l	5	<1	3	**	24
Total Suspended Solids	mg/l	43	10	<10	27	36
Surfactants	mg/l	< 0.2	1.1	0.9	0.8	N/A
Mineral Oils	mg/l	< 0.01	< 0.01	< 0.01	< 0.01	N/A
Oils, Fats & Greases	mg/l	< 0.01	< 0.01	< 0.01	< 0.01	12
Total Coliforms	cfu/100ml	>2420	-	-	-	N/A
Faecal Coliforms	cfu/100ml	686.7	-	-	-	N/A

N/A - not applicable

*Condition 7.7.1.3. No grab sample shall exceed 1.2 times the emission limit value.

3.2 Groundwater Monitoring

There are no direct or indirect emissions to ground from the installation. Groundwater monitoring is carried out annually at the two locations (MW1 and MW2) shown on Figure 3.1. MW1 is on the southern boundary of the site in an open paved yard and MW2 is at the northern boundary, near the main entrance to the site. MW1 is upgradient of site activities, while MW2 is downgradient.

The closed Finiskiln landfill is immediately south west and up hydraulic gradient of the site. The landfill was operated by Sligo Borough Council from 1958 to 1994 and was used for the disposal of municipal solid waste. The Garavogue River estuary is immediately north of the site.

The monitoring was carried out in March. The parameters were ammoniacal nitrogen, BOD, chloride, mineral oils, pH and coliforms. The methodologies were all ISO/CEN approved or equivalent. There are no trigger limits set in the Licence and the results are compared to the Interim Guideline Values (IGV) on groundwater quality published by the Agency and the Groundwater Threshold Values (GTV) set out in the European Communities Environmental Objectives (Groundwater) Regulations (S.I. 9 of 2010). The IGVs are not statutory, but were developed to assist in the assessment of impacts on groundwater quality. The IGVs are based on, but are more conservative than the Drinking Water quality standards. GTVs have only been established for core indicator parameters. The results are shown on Table 3.2.

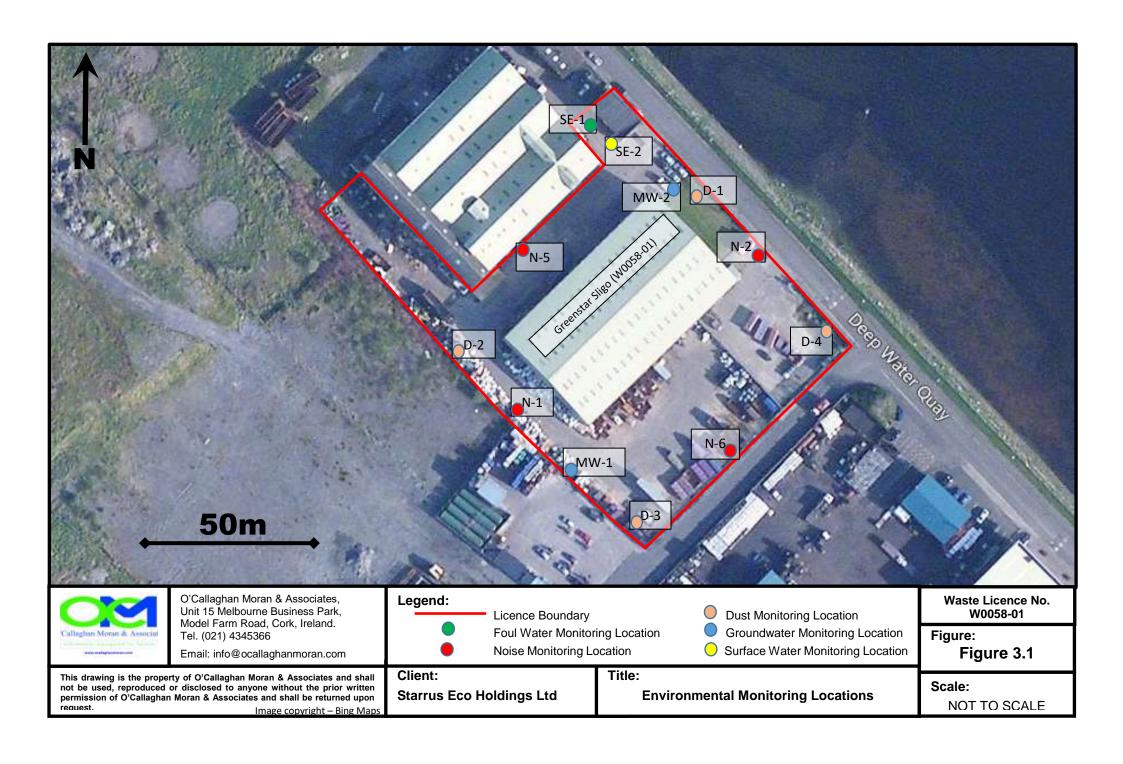

Table 3.2 Groundwater Monitoring Results – March 2017

table 5.2 Ground water Womtoring Results – Waren 2017							
Parameter	Units	MW-1	MW-2	IGV	GTV		
pН	pH units	7.80	7.70	6-9	1		
Chloride	mg/l	317.9	32.1	30	24-187.5		
Ammoniacal Nitrogen	mg/l	4.64	3.75	0.15	0.065-0.175		
BOD	mg/l	7	2	-	-		
Mineral Oils	mg/l	< 0.01	< 0.01	0.01	-		
Faecal Coliforms	Cfu/100ml	<1	86	0	-		
Total Coliforms	Cfu/100ml	4.1	>2420	0	-		

Elevated levels of chloride and ammoniacal nitrogen were detected in the upgradient well (MW-1). Total coliforms were detected at low levels, while faecal coliforms were not detected. Elevated levels of chloride, ammoniacal nitrogen, and total and faecal coliforms were detected in the downgradient well (MW-2). The faecal coliform levels detected at MW-2 were much lower than the levels measured in Q4 2016.

The elevated ammoniacal nitrogen may be attributable to the former landfill. Elevated chloride has been detected in the groundwater in the recent past and is likely associated with saltwater intrusions from the estuary.

The mineral oil level in MW-1 was below the detection limit showing a decrease to levels similar to those detected in 2004.

The closed Finiskiln landfill is immediately south west and up hydraulic gradient of the site. The landfill was operated by Sligo Borough Council from 1958 to 1994 and was used for the disposal of municipal solid waste. The Garavogue River estuary is immediately north of the site.

The elevated ammoniacal nitrogen may be attributable to the former landfill; however, the presence of elevated levels of total and faecal coliforms in MW-2 indicates that the groundwater in the vicinity of this monitoring well may be impacted by sanitary wastewater. There are two possible sources:

- Site sanitary wastewater
- Irish Water foul sewer

Site sanitary wastewater is collected in a foul sewer located west of MW-2. The sewer flows north towards the SE-1 monitoring manhole and connects to the Irish Water sewer to the north east of MW-2. The mains sewer runs adjacent to the north eastern site boundary along the Deepwater Berths Road. A CCTV survey of the site sanitary wastewater system was carried out in January 2017. The system was found to be intact and fit for purpose.

3.3 Foul Water Monitoring

In July 2010, following agreement with the Agency, the drainage system was connected to the Sligo County Council municipal sewer serving the municipal waste water treatment plant located approximately 500 m from the installation.

Prior to Q4 2015 foul water was generated by floor runoff in the transfer building and sanitary discharges only. As mentioned in Section 3.1 above, drainage works carried out between 02/10/15 and 20/11/15 included the diversion of storm water run-off from the South Eastern Yard from the Garvogue River estuary to the foul sewer.

Monitoring is carried out at one location (SE-1), the final discharge point from the installation. A technical amendment issued in January 2013 defines the current monitoring schedule for emissions to sewer. Foul water monitoring is carried out quarterly in accordance with Condition 9.2 and Schedule E.7 of the licence. The sampling location is shown on Figure 3.1 and the monitoring results are presented on Table 3.5.

The range of analysis as specified in Schedule E.7 of the amended Waste Licence includes pH, BOD, COD, ammoniacal nitrogen, chloride, detergents, total suspended solids, mineral oils and oils, fats and greases. The sampling and analysis was carried out in accordance with recognised quality assurance and control procedures.

The ELVs are based on a direct discharge to the Garavogue River. As the discharge to the river has stopped, the ELVs are no longer applicable. In approving the connection to the municipal

sewer, the Sanitary Authority set discharge limits and these are included in Table 3.5. The foul water discharge complied with the Sanitary Authority ELVs..

A technical amendment granted in January 2013 significantly altered the existing monitoring regime and introduced a requirement to obtain composite samples of foul water samples for a number of parameters. This requirement to obtain composite samples was appealed by SEHL and with the agreement of Sligo County Council, the Agency advised that it was appropriate to maintain the current sampling technique (grab sampling).

Table 3.5 Foul Water Monitoring Results for 2017

Parameter	Units	Q1	Q2	Q3	Q4	Sanitary Authority Emission Limits
pН	pH Units	1.66	7.87	7.45	7.08	6 – 10
BOD	mg/l	>1,000	7.83	3.59	*	3,000
COD	mg/l	819	65	11	244	6,000
Chloride	mg/l	1156.9	30.2	18.4	35.6	-
Ammoniacal Nitrogen	mg/l	12.22	5.83	1.80	1.96	100
Total Suspended Solids	mg/l	26	38	<10	24	1,250
Surfactants	mg/l	2.9	1.7	1.0	11	100
Oils, Fats & Greases	mg/l	< 0.01	< 0.01	< 0.01	< 0.01	100
Mineral Oils	mg/l	< 0.01	< 0.01	< 0.01	< 0.01	10

^{* -} Not analysed due to laboratory closure over Christmas period.

In Q1 2017, the pH levels measured in the foul water sample was below the emission limit. An investigation identified the source as a toilet cleaning agent. The Agency were informed of this incident in accordance with Licence conditions.

3.4 Noise Survey

All waste processing is carried out internally which provides significant attenuation for noise emissions from waste processing. The annual noise survey was carried out on the 1st August 2017 in accordance with Schedule E of the Licence. Monitoring was carried out at the four noise monitoring locations, N-1, N-2, N-5 and N-6 shown on Figure 3.1. The results are summarised on Table 3.6. The survey concluded that the installation was fully compliant with its licence requirements as there were no impacts from installation activities at any potentially noise sensitive locations.

The nearest sensitive receptors to the installation are private residences located approximately 200 metres to the east of the installation across the Garavogue River at Cartron. There are also some individual residences located close to the Finiskiln Industrial Estate approximately 200 metres south of the installation. An inspection undertaken by the acoustic consultant in the vicinity of the nearest sensitive locations prior to the onsite noise survey established that noise emissions from the study site were not audible or discernible at these locations.

 Table 3.6

3.5 Landfill Gas Monitoring

The annual gas monitoring was carried out in accordance with Schedule E of the Licence and included measurements of methane, carbon dioxide, oxygen and atmospheric pressure from the two groundwater monitoring wells (MW1 & MW2) and the installation office on the 4th July 2017.

OCM carried out the gas measurements using a Gas Data LSMx gas analyser. The meter was calibrated before use. The detection limit is 0.1% for methane, carbon dioxide and oxygen. The results are shown on Table 3.7. There are no trigger limits set in the waste licence. Carbon dioxide and methane were not detected at any of the monitoring locations. There is no evidence that landfill gas is present in the soils beneath the installation.

4. SITE DEVELOPMENT WORKS

4.1 Engineering Works

There were a no specified engineering works undertaken in 2017.

4.2 Summary of Resource & Energy Consumption

Table 4.1 presents an estimate of the resources used on-site during the reporting period and the previous two years. An energy audit was completed in compliance with Condition 9.13 of the Technical Amendment during 2013 and an Energy Management Policy was developed subsequent to this. A recent energy audit was conducted in May 2016

Table 4.1 Estimates of Resources Used On-Site 2017, 2016 & 2015

Resources	Quantities 2017	Quantities 2016	Quantities 2015
Diesel (green)	15,600 litres	23,400 litres	18,900 Litres
Electricity	116,900 kWh	133,792 Units	103,945 Units
Hydraulic & Engine Oil	800 litres	800 litres	600 litres

4.3 Bund Integrity Test

Condition 4.12.4 of the licence requires that the integrity and water tightness of all underground pipes, tanks, bunding structures and containers and their resistance to penetration by water or other materials carried or stored therein shall be tested and demonstrated by the licensee. It further states that this testing shall be carried out by the licensee at least once every three years and reported to the Agency on each occasion. This testing shall be carried out in accordance with any guidance published by the Agency. A written record of all integrity tests and any maintenance or remedial work arising from them shall be maintained by the licensee.

Integrity testing was carried out in 2017 and the bunds, interceptors and drainage lines were passed fit for purpose. The reports are retained at the installation for Agency inspection.

5. WASTE RECEIVED AND CONSIGNED

Table 5.1 shows the quantities of wastes accepted and consigned for the reporting period. A more detailed description of the wastes received and consigned in 2017 is presented in the PRTR submission in Appendix 1.

The total quantity of waste received was 26,520 tonnes and the total amount consigned was 27,113 tonnes. For comparative purposes the amounts of waste received and consigned from 2003 to 2016 are presented in Tables 5.2 and 5.3. As per Condition 5.8 of the Licence all the wastes consigned from the site went to authorised recovery and disposal facilities and a copy of the relevant Facility Permit or Waste Licences retained on site for Agency inspection.

The records show that more waste was consigned from the site than accepted. The difference was due to the waste remaining on-site at the end of 2016 which was consigned in 2017.

6. ENVIRONMENTAL INCIDENTS AND COMPLAINTS

6.1 Incidents

There were two environmental incidents during the reporting period one of which related to an exceedance of the emission limit for TSS in surface water. The other exceedance was of the emission limit for pH in the foul water. There were no other incidents at the installation as defined by the Licence.

The pH levels measured in the foul water sample was below the emission limit. An investigation identified the source as a toilet cleaning agent. The exceedances were reported to the Agency in accordance with Condition 3.3 of the Licence.

6.2 Register of Complaints

SEHL maintains a register of complaints received in accordance with Condition 3.12 of the Licence. One complaint was received during the reporting period.

7. ENVIRONMENTAL DEVELOPMENT

7.1 Environmental Management Programme Report

SEHL have implemented an Integrated Management System (IMS) in accordance with the requirements of Occupational Health and Safety Assessment Series (OHSAS) 18001:2007 and International Standard Organisation (ISO) 14001:2004 in order to manage the Health, Safety and Environmental performance of their business and to control health and safety risk and to minimise their environmental aspects and impacts.

The IMS has been developed for the achievement of continual improvement taking into the requirements of the Industrial Emissions Licence Conditions. SEHL has prepared and effectively implement documented procedures and instructions in accordance with the requirements of both the OHSAS 18001:2007 and ISO 14001:2004. A successful IMS external surveillance audit was conducted on 18th August 2016.

As part of this IMS, SEHL has developed a list of environmental, management, operating and maintenance procedures, details of which are outlined in Appendix 2. The schedule of Objectives and Targets, including their status for 2017 (Table 7.1), as well as the proposed Objectives and Targets for 2018 (Table 7.2) are presented below.

7.1.1 Site Management Structure

Name: Barry Gallagher (January to July)

Responsibility: Operations Manager; overall management of the site, responsible for

management of all fleet activities

Experience: 23 years experience. N.C.B.S

Name: Tony Byrne (From July)

Responsibility: Operations Manager; overall management of the site, responsible for

management of all fleet activities

Experience: 1 year waste management experience. Has completed the "FAS" Waste

Management course.

Name: Claire McMahon
Responsibility: Office administration

Experience: 9 years in the waste industry. Has completed the "FAS" Waste

Management course.

7.1.2 Staff Training

Staff training is carried out for any new staff employed at the installation as required. Copies of all training records are held in the installation office.

7.2 Environmental Management Programme Proposal

7.2.1 Schedule of Objectives 2017

The objectives that were achieved during this reporting period are outlined in Table 7.1.

7.2.2 Schedule of Objectives 2018

The schedule of targets and objectives for 2018 are presented in Table 7.2.

 Table 7.1
 Schedule of Objective and Targets 2017

No.	Objective	Target	Timescale	Responsibility	Status
1	Odour management	Ensure odour management plans are followed and potential new sources of odour are identified	Q1 - Q4	Site management	Ongoing
2	Fire prevention	Implement recs from Fire Risk Assessments Update ERP & APP Maintain fire detection equipment	Q1 - Q4	Site management/ EHS team	Ongoing
3	Waste storage	Review waste storage practices on each site to ensure that they are inline with licence conditions, fire prevention and insurance recommendations	Q1 - Q4	Site management/ EHS team	Ongoing
4	Waste acceptance, classification & records	EWC training for all weighbridge ops. Centralisation of all licences & permits inc. NWCPs for hauliers.	Q1 - Q4	EHS team	Completed
5	CRAMP, ELRA & Financial Provision	CRAMP, ELRA & Financial Provision to be reviewed	Q2	EHS team	Completed
6	Lighting in MRF buildings	Clean & upgrade where required all light fittings in MRF buildings	Q3	Site management	Completed
7	NWCP exemptions	Implement NWCP exemption declarations	Q1 - Q4	Site management	Completed
8	Licence Review	Lodge licence review for changes to waste types in CA site	Q2-Q4	EHS team	On Hold
9	Infrastructure Repairs	Seal up openings in building eves	Q2	Site management	Ongoing

Table 7.2 Schedule of Objective and Targets 2018

No.	Objective	Target	Timescale	Responsibility		
1	Nuisance management	Ensure odour/noise/dust management plans are followed and potential new sources are identified	Q1 - Q4	Site management		
2	Fire prevention	Implement recs from Fire Risk Assessments Update ERP & APP where applicable Maintain fire detection equipment	Q1 - Q4	Site management/EHS team		
3	Waste storage	Waste storage Review waste storage practices on each site to ensure that they are inline with licence conditions, fire prevention and insurance recommendations				
4	ISO 14001 transition	Transition ISO 14001 to the 2015 standard	Q2	EHS team		
5	Paperless project	Implement plans for a paperless office	Q3-Q4	All staff		
6	Resource tracking	Sites to track energy usage and other resources in order to conserve wherever possible	Q1 - Q4	Site management/EHS team		
7	Hardstand & site infrastructure	Review hardstand and formulate repair plan as required. Record using EF11.	Q1 - Q4	Site management/EHS team		
8	Update FRA	Carry out new Fire risk Assessment for tyre acceptance	Q2-Q3	EHS Team/site management		

7.3 Communications Programme

SEHL are committed to setting the standard in waste management and ensuring environmental compliance in all operations. To this end SEHL has drawn up a Communications Programme, which details how members of the public are facilitated in accessing environmental information at the installation.

Records available for public inspection on-site include:-

- Environmental, Health & Safety Policy;
- Waste Licence:
- Licence Application and Review documentation;
- Monitoring Records;
- Complaints File;
- EPA Correspondence File.

Opening Times for Inspection of Records are from 10 am – 4 pm.

Visits to the site should be arranged in advance by ringing the Facility Manager or Supervisor at 071 - 9143037.

7.4 ELRA & Report on Financial Provision

A Decommissioning Management Plan (DMP) and Environmental Liabilities Risk Assessment (ELRA) including Financial Provision (FP) were submitted to the Agency in 2013 as part of the transfer of the licence which occurred in Q1 2014. Both the DMP and ELRA have been approved by the Agency. In 2017, the Agency requested a review of the DMP and ELRA, revised copies of the reports were submitted in April.

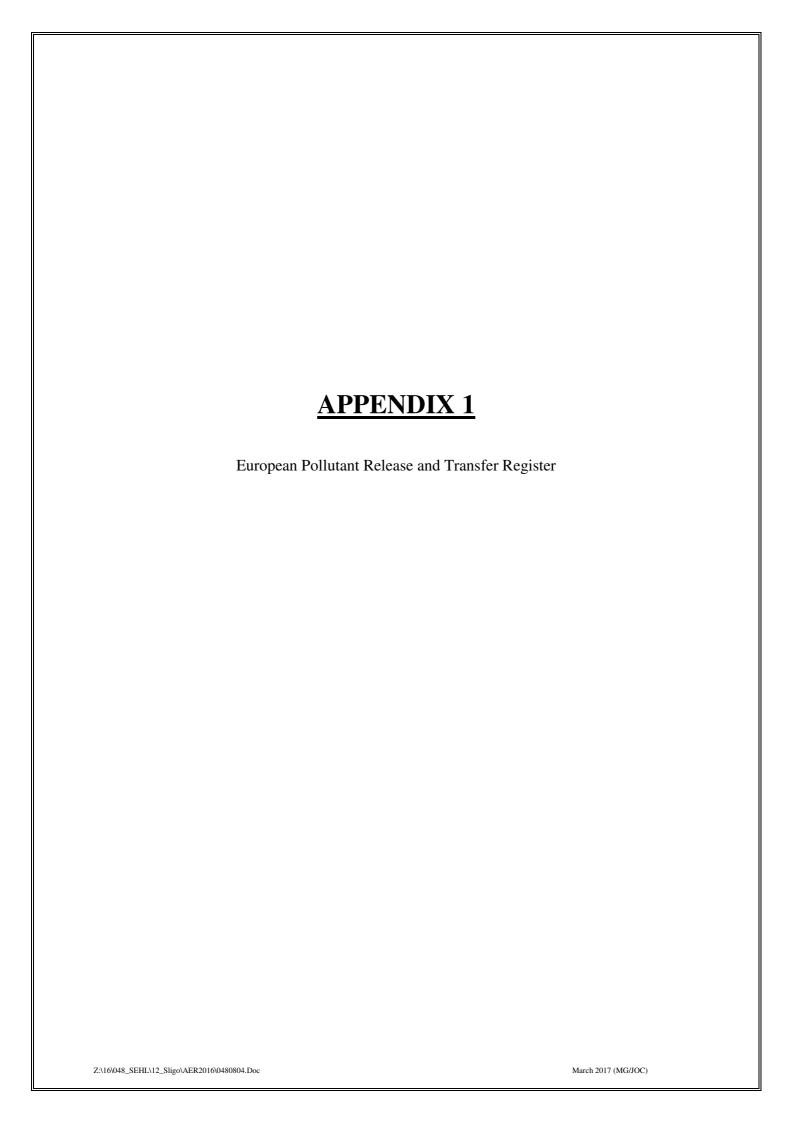

7.5 Nuisance Controls

SEHL has contracted a vermin control company to carry out nuisance control at the installation. Pestfree provide pest control at the installation and also provide for the treatment of insects at the installation if necessary. Daily litter picks and road-sweeping are carried out by yard operators during the course of their daily duties.

8. OTHER REPORTS

8.1 European Pollutant Release and Transfer Register Regulation

Under the European Pollutant Release and Transfer Register Regulation (EC) No. 166/2006 SEHL are required to submit information annually to the Agency. A copy of the information submitted to the Agency via the web-based data reporting system is included in Appendix 1.

Additional Data Requested from Landfill operators

For the purposes of the National Inventory on Greenhouse Gases, landfill operators are requested to provide summary data on landfill gas (Methane) flared or utilised on their facilities to accompany the figures for total methane generated. Operators should only report their Net methane (CH4) emission to the environment under T(total) KG/yr for Section A: Sector specific PRTR pollutants above. Please complete the table below:

Landfill: Starrus Eco Holdings Limited (Sligo)

Landini.	Starras Leo Holdings Limited (Sligo)				_	
Please enter summary data on the quantities of methane flared and / or utilised			Meth	nod Used
